

-
- The diagram illustrates the electrical connection for the RDT 10 Voltage Reducer. The RDT 10 is a rectangular unit with a label that includes the ALAN CTE INTERNATIONAL logo, the model name RDT 10, and the description VOLTAGE REDUCER. It also features a warning symbol (a triangle with a flame) and a CE mark. The connection terminals are as follows:
- 20-30 V IN:** Connected to the positive terminal (+) of the BATTERIES.
 - OUT 13,8 V:** Connected to the positive terminal (+) of the RTX unit.
 - GND:** Connected to the negative terminal (-) of the BATTERIES.
 - 4-terminal block:** Connected to the negative terminal (-) of the BATTERIES.
- The BATTERIES are represented by a rectangular block with a positive terminal (+) and a negative terminal (-). The RTX unit is represented by a rectangular block with a positive terminal (+) and a negative terminal (-).
