

2. Connect camera

2.1 Connect network cable to router and plug in camera power adapter

The router must be able to connect to the Internet!
Please use the standard power supply.

2.2 Connect network cable and power to the camera, it needs about a few minutes to self checking and then start working

Network indicator light (green): always flashing means network data transmission is normal

The camera will turn on AP mode when the camera is only connected to the power supply. You can connect to camera via the AP mode. For details, please find help documentation “How to use the AP mode of the camera” in the CD information.

3. View via mobile phone

3.1 Download “CamHi” from Google Play Store / Apple App Store or scan the QR code below to get APP information

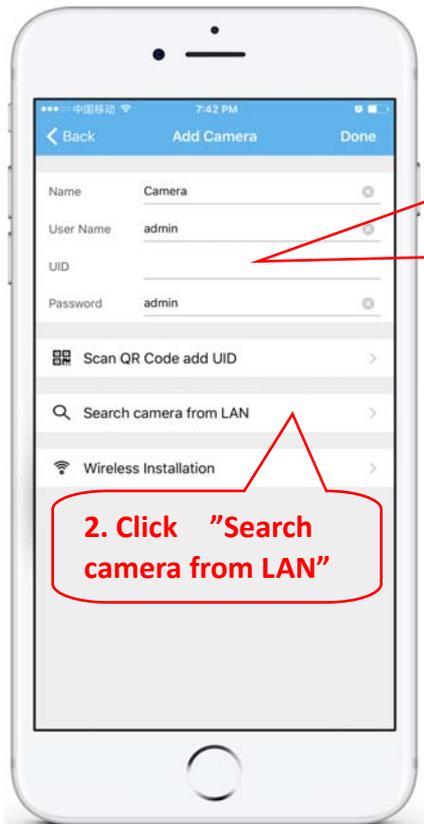

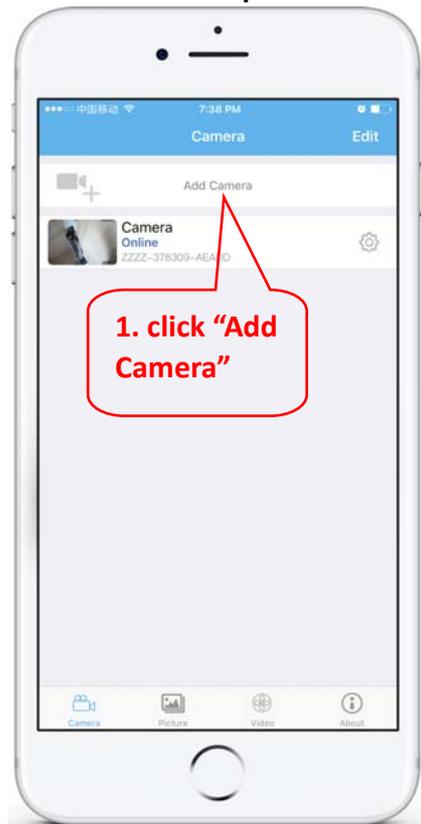

Android

CamHi

IOS

3.2 Run APP and Add Camera following the procedure below. After this step, rename your camera, and finish procedure

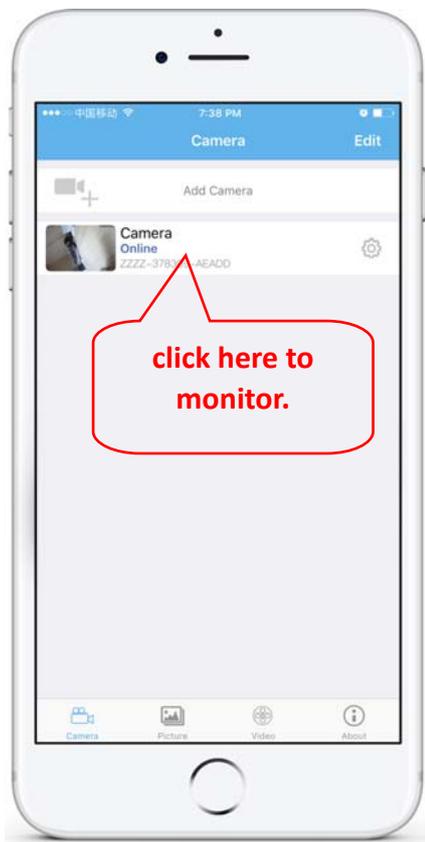

Or you can enter the UID by scanning the QR code on the camera's label, as shown below (if available) or input camera's UID manually from camera label (if available)

Check and enter Default User name and Password: admin / admin

3.3 After adding the camera, click online camera to view real-time image

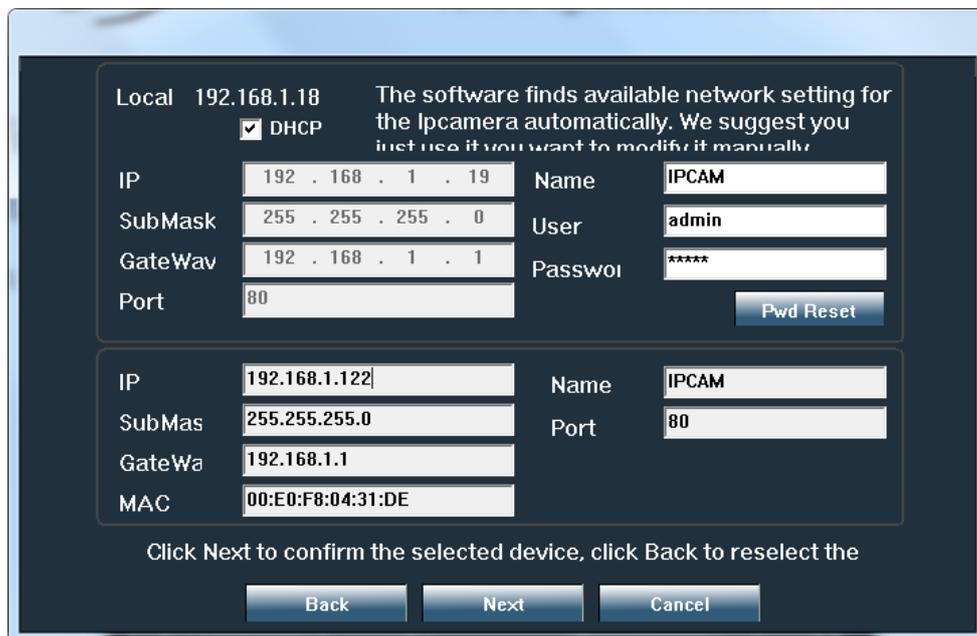

Detailed instructions for CamHi app are available in the CD , and on the product's webpage www.pni.ro

4. View camera from PC

4.1 For product configuration install "Search tool" software from the CD. Run software and search camera in LAN (Camera and PC must be connected in the same network/router)

Click "Next" and you can modify network parameters of the camera, according to your network settings. You can use DHCP setting for faster configuration .

Default user name:
admin
Default password:
admin

4.2 In order to access remotely IP camera through Internet install and use "HiP2P Client" software from CD (for PC / Laptop with Windows). The software allows the initial search and configuration of camera in the local network and the advanced configuration of the camera's parameters.

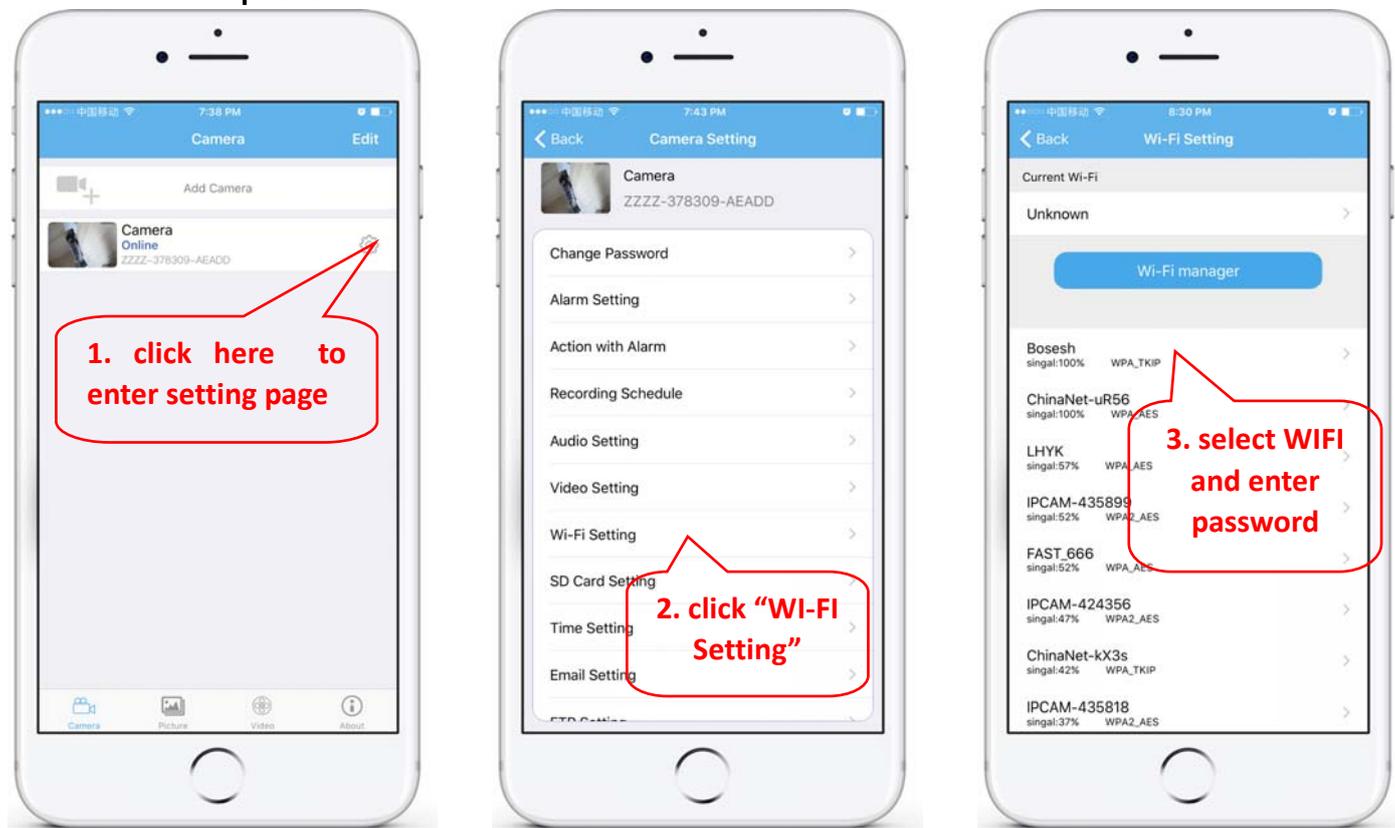

HiP2P Client software installation packages and instructions are available on CD or on seller's webpage www.pni.ro

Note: The camera can also be accessed from IE browser by entering IP and port of camera : <http://XXX.XXX.XXX.XXX:80> where xx is the IP address found in SearchTool.

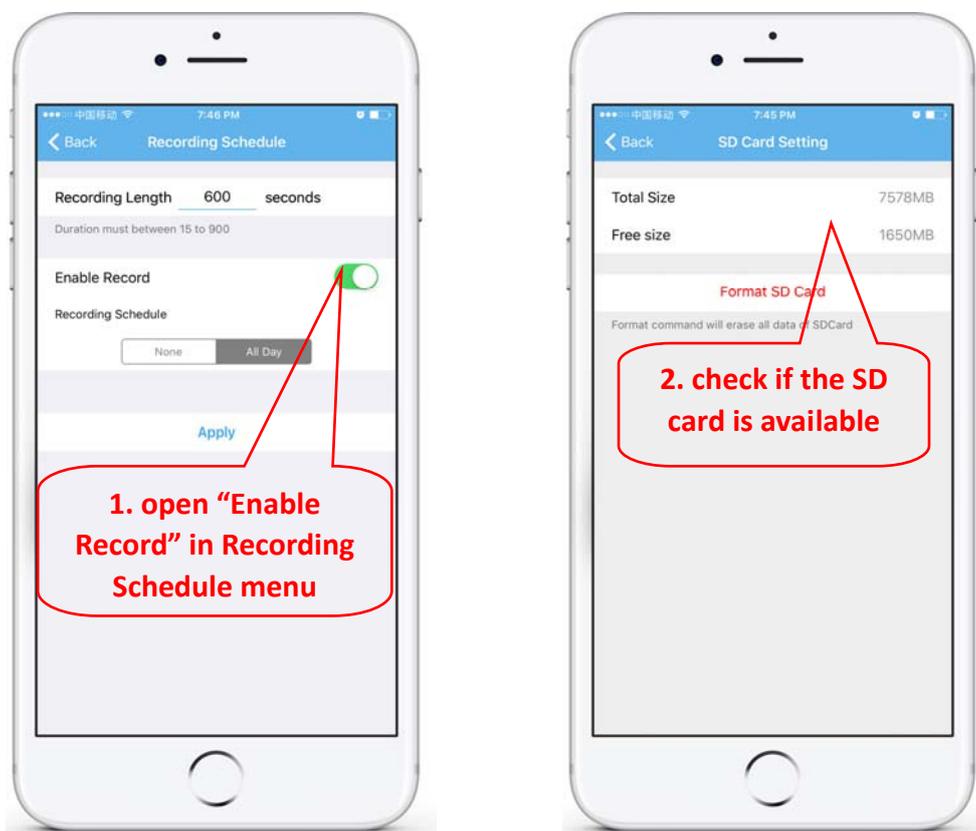

5. Set WIFI

5.1 Set WIFI on phone

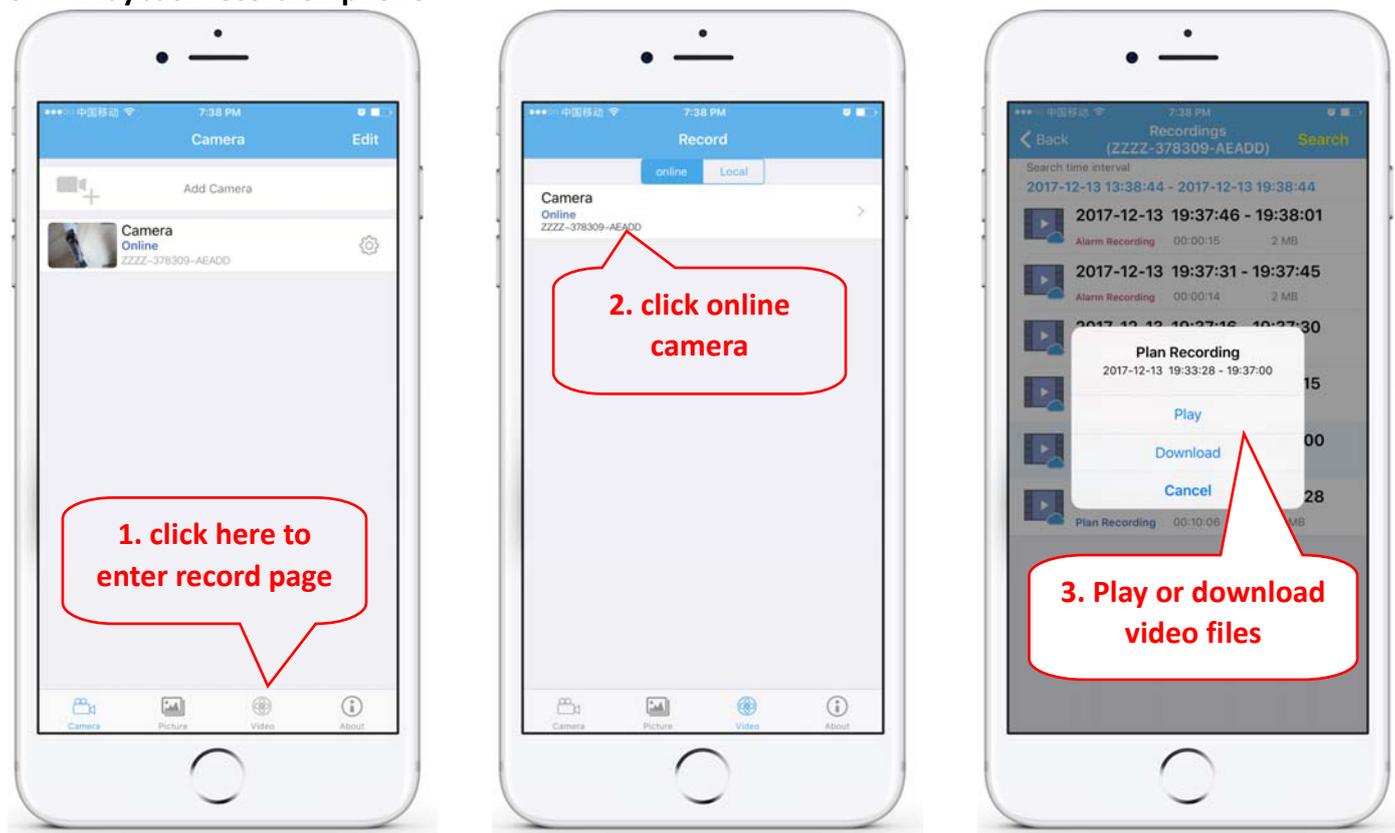

6.3 Set schedule recording on phone

6.4 Playback record on phone

These parameters can be set in more detail via HiP2P Client Software or IE browser on the PC!

7. Reboot and restore factory settings

7.1 Reconnect the power to restart the camera

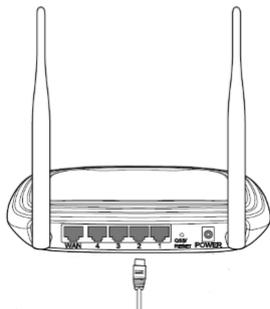

7.2 Press and hold the reset button for 15 seconds and the camera will restore to factory settings

Also you can restart or reset the camera via mobile phone or PC.

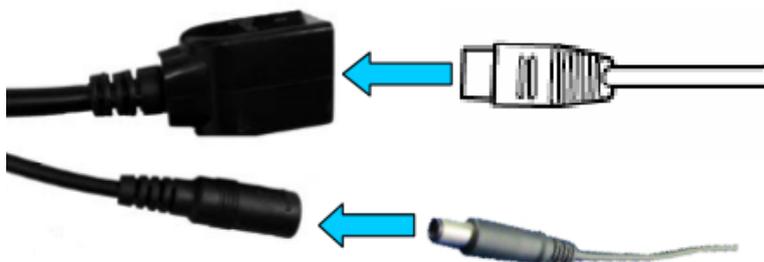

2. Свържете камерата

2.1 Свържете мрежовия кабел към рутера и включете захранващия адаптер на камерата

**Рутерът трябва да може да се свърже с интернет!
Моля, използвайте стандартното захранване.**

2.2 Свържете мрежовия кабел и захранването към камерата, има нужда от около няколко минути, за да се самопроверите и след това да започнете да работите

Индикатор за мрежа (зелен): винаги мигащ означава, че предаването на мрежови данни е нормално

Камерата ще се включи в режим AP, когато камерата е свързана само към захранването. Можете да се свържете с камерата чрез режим AP. За подробности, моля, намерете помощна документация „Как да използвате AP режима на камерата“ в информацията за CD.

3. Преглед чрез мобилен телефон

3.1 Изтеглете „CamHi“ от Google Play Store / Apple App Store или сканирайте QR кода по-долу, за да получите информация за APP

CamHi

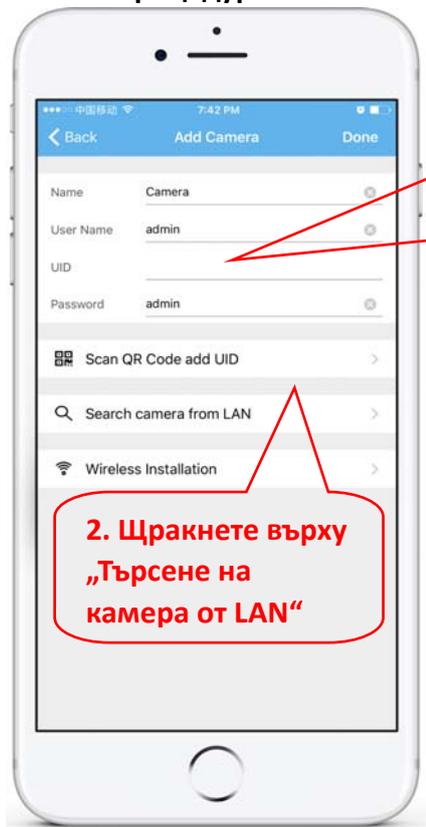

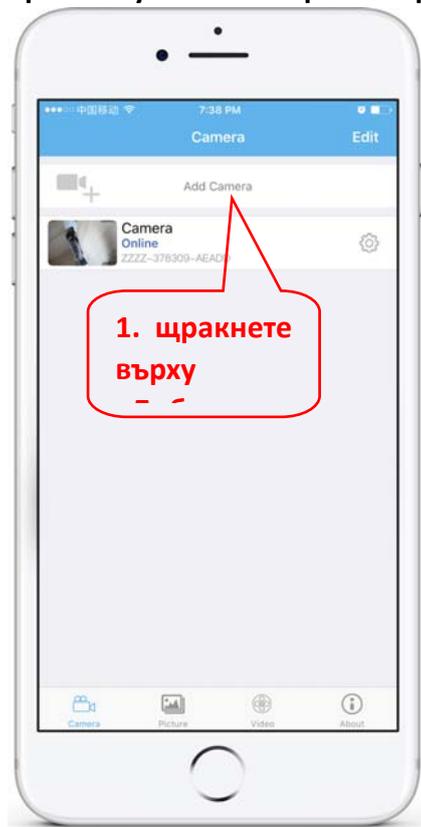

Android

IOS

3.2 Стартирайте APP и добавете камера, като следвате процедурата по-долу. След тази стъпка преименувайте камерата и приключете процедурата

българ

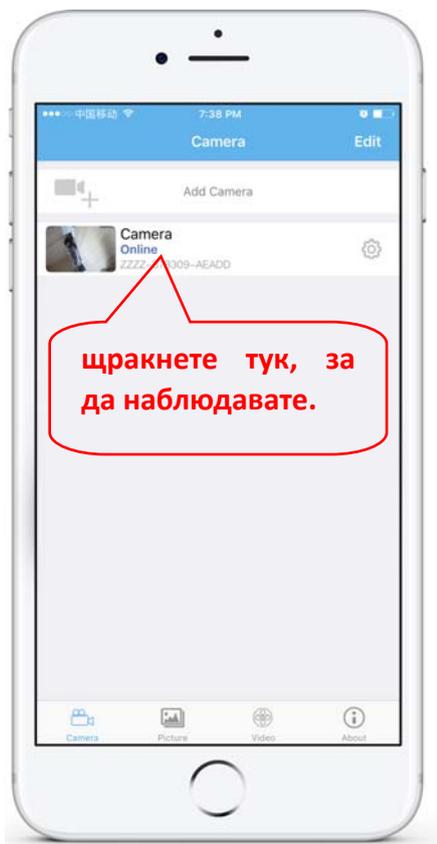

Или можете да въведете UID, като сканирате QR кода на етикета на камерата, както е показано по-долу (ако е налично) или ръчно от етикета на камерата (ако е наличен)

Проверете и въведете потребителско име по подразбиране и парола: admin / admin

3.3 After adding the camera, click online camera to view real-time image

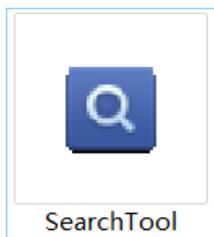

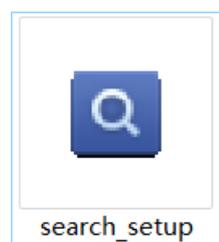

Подробни инструкции за приложението CamHi са достъпни на компактдиска и на уеб страницата на продукта

4. Вижте камерата от компютър

българ

4.1 За конфигуриране на продукта инсталирайте софтуера „Search tool“ от компактдиска. Стартирайте софтуер и камера за търсене в LAN (камерата и компютърът трябва да са свързани в една и съща мрежа / рутер)

NO	IP Address	Name	MAC Address	Version	po
0	192.168.1.102	IPCAM	00:E0:F8:04:31:DE	V7.1.0.2.1-20150817	

Щракнете върху „Напред“ и можете да промените мрежовите параметри на камерата, според вашите мрежови настройки. Можете да използвате настройката на DHCP за по-бърза конфигурация.

Local 192.168.1.18

4.2 За да получите достъп до отдалечена IP камера чрез Интернет, инсталирайте и използвайте софтуера "HiP2P Client" от CD (за компютър / лаптоп с Windows). Софтуерът позволява първоначалното търсене и конфигуриране на камерата в локалната мрежа и разширената конфигурация на параметрите на камерата.

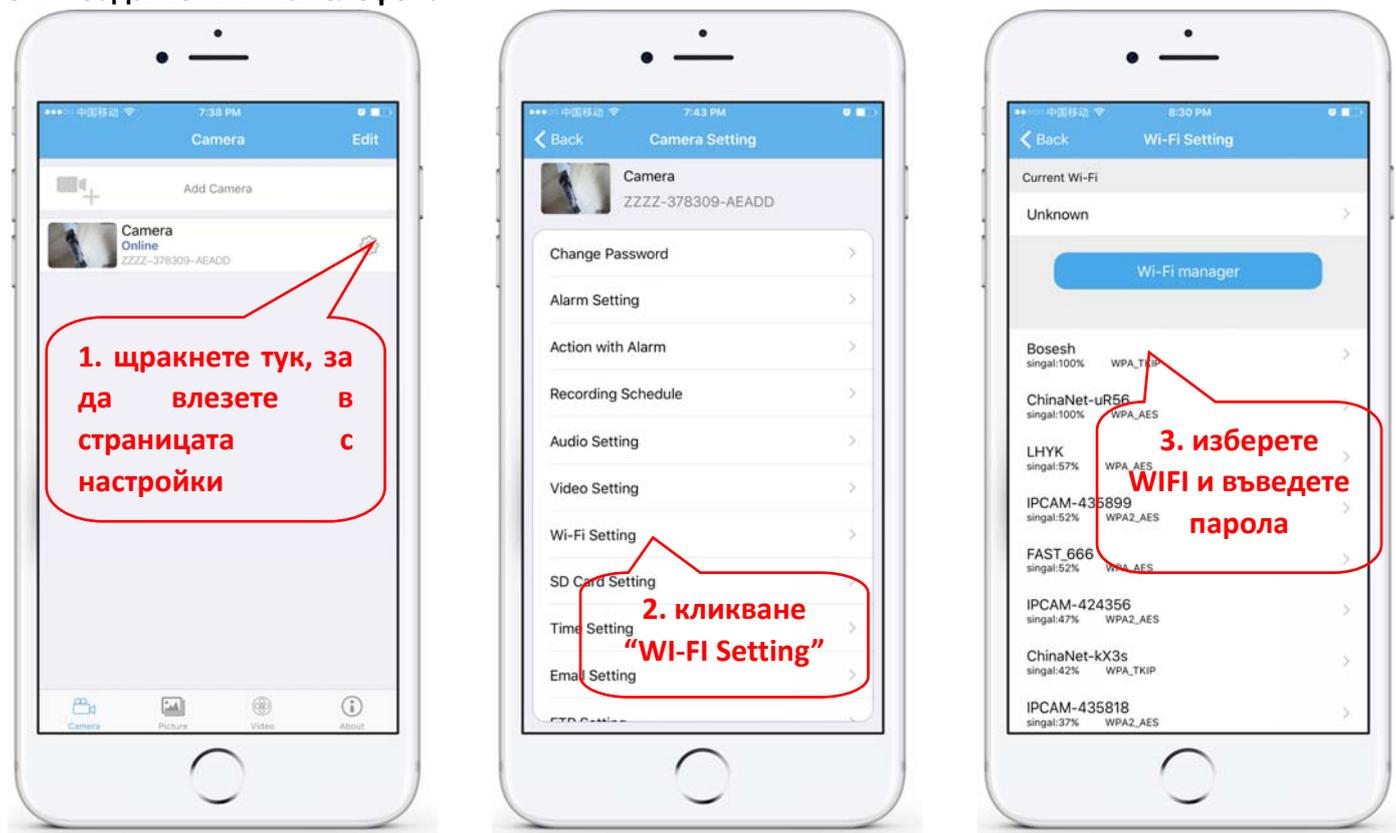

HiP2P Client software installation packages and instructions are available on CD or on seller's webpage www.pni.ro

Забележка: Камерата може да бъде достъпна и от IE браузър, като въведете IP и порт на камера <http://XXX.XXX.XXX.XXX:80> където xx е IP адресът, намерен в SearchTool. българ

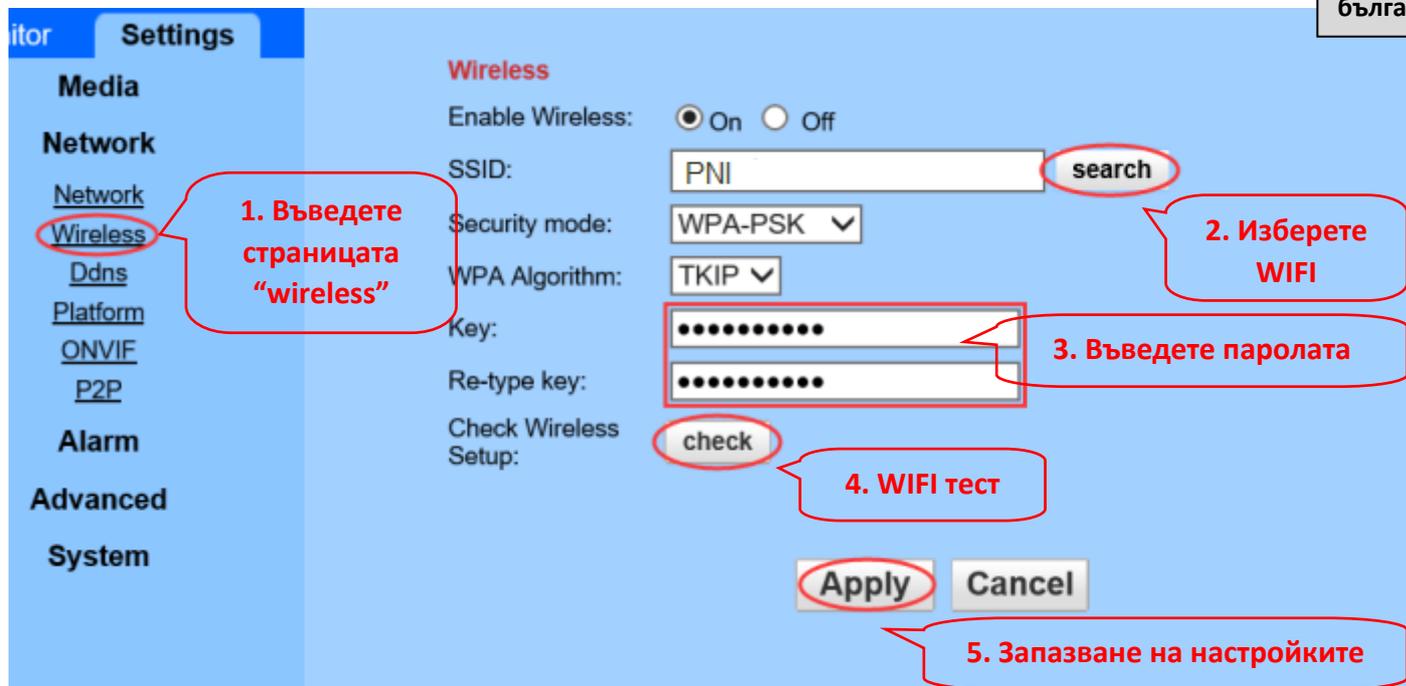

5. адайте WIFI

5.1 Задайте WIFI на телефона

5.2 Задайте WIFI чрез браузър на компютър

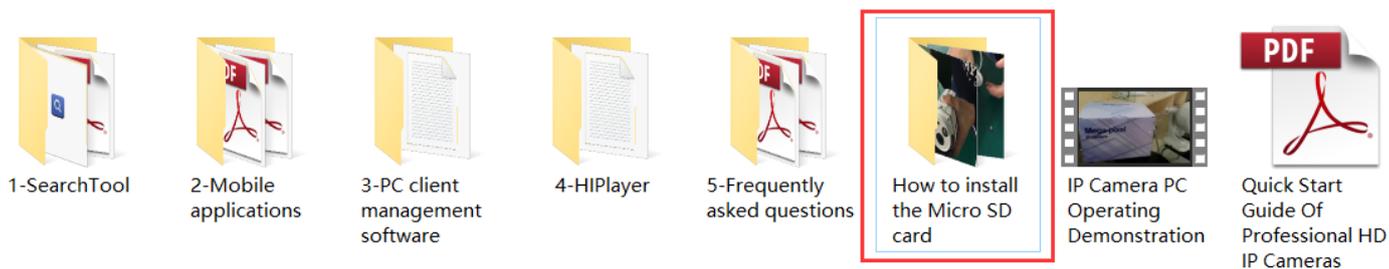

българ

WIFI маршрутизаторът трябва да има стойност на сигнала, по-голяма от 50%, а името на WIFI трябва да е английско и да не може да съдържа специални знаци.

След като WIFI настройката приключи, камерата автоматично ще премине към WIFI връзката, когато мрежовият кабел е изключен.

6. Задайте запис на Micro SD картата

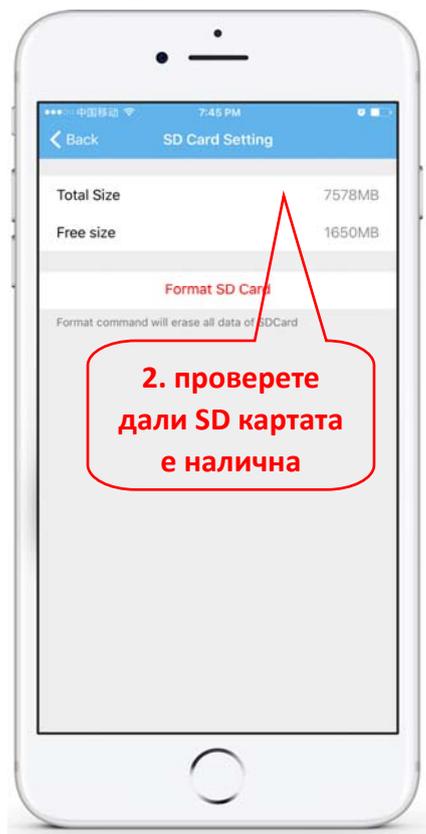

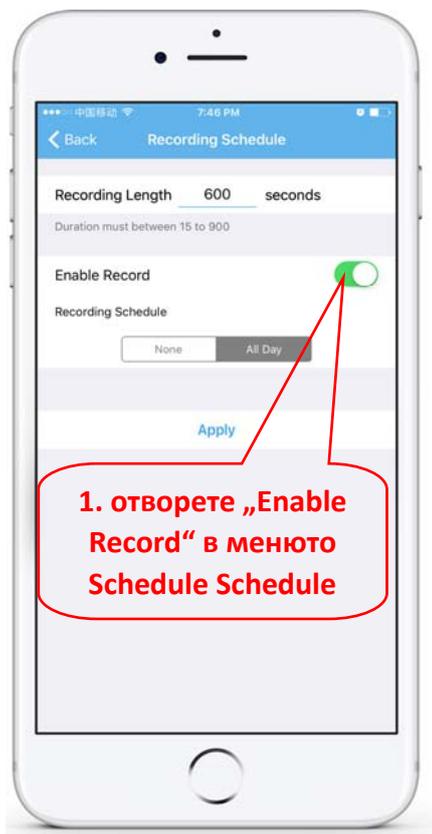

6.1 Намерете ръководството за инсталиране на Micro SD карта от компактдиска и инсталирайте Micro SD картата на камерата

6.2 Задайте запис на аларма за откриване на движение от телефонното приложение

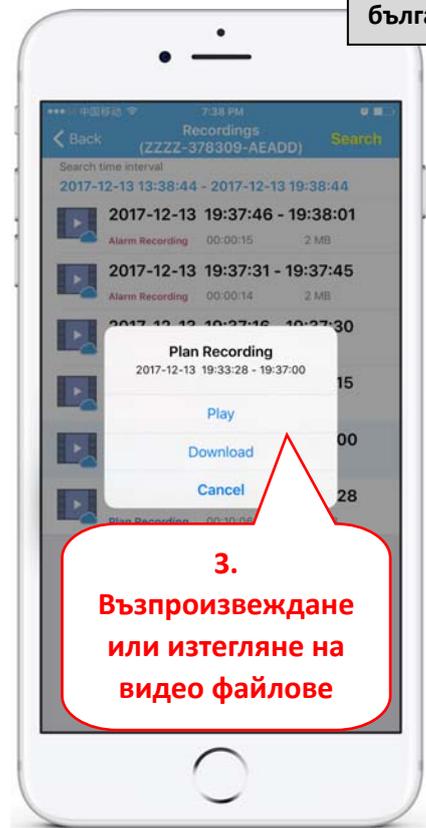

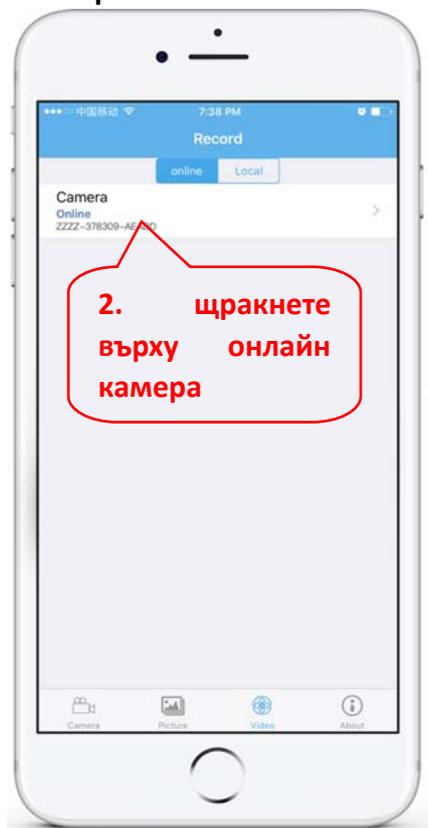

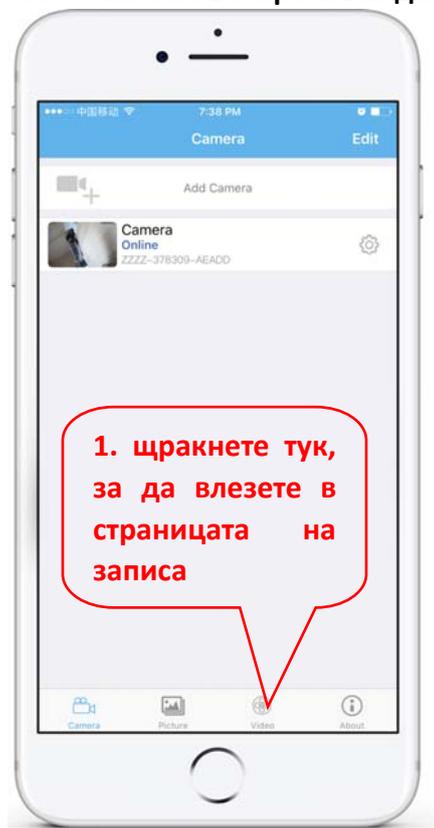

6.3 Задайте запис по график на телефона

6.4 Запис на възпроизвеждане на телефона

българ

Тези параметри могат да бъдат зададени по-подробно чрез HiP2P клиентски софтуер или IE браузър на компютъра!

- ① IP Kamera
- ② Stromadapter
- ③ Bedienungsanleitung
- ④ Netzkabel
- ⑤ WIFI-Antenne
- ⑥ Schraubt die Tasche

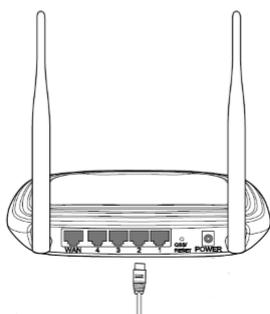

1.3 Produktschnittstelle:

2. Kamera anschließen

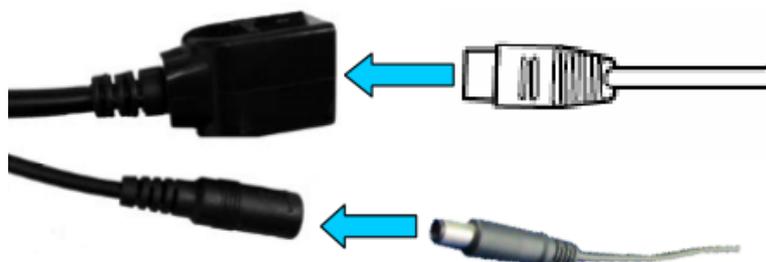

Deutsch

2.1 Schließen Sie das Netzkabel an den Router an und schließen Sie das Netzteil der Kamera an

**Der Router muss eine Verbindung zum Internet herstellen können!
Bitte verwenden Sie das Standardnetzteil.**

2.2 Schließen Sie das Netzkabel und die Stromversorgung an die Kamera an. Es dauert einige Minuten, bis sich die Kamera selbst überprüft und die Arbeit aufgenommen hat

Netzwerkanzeige (grün): Immer blinkend bedeutet, dass die Netzwerkdatenübertragung normal ist

Die Kamera schaltet den AP-Modus ein, wenn die Kamera nur an die Stromversorgung angeschlossen ist. Sie können über den AP-Modus eine Verbindung zur Kamera herstellen. Ausführliche Informationen finden Sie in der Hilfedokumentation „So verwenden Sie den AP-Modus der Kamera“ in den CD-Informationen.

3. Ansicht per Handy

3.1 Per Handy anzeigenLaden Sie „CamHi“ aus dem Google Play Store / Apple App Store herunter oder scannen Sie den folgenden QR-Code, um Informationen zur App zu erhalten

Android

CamHi

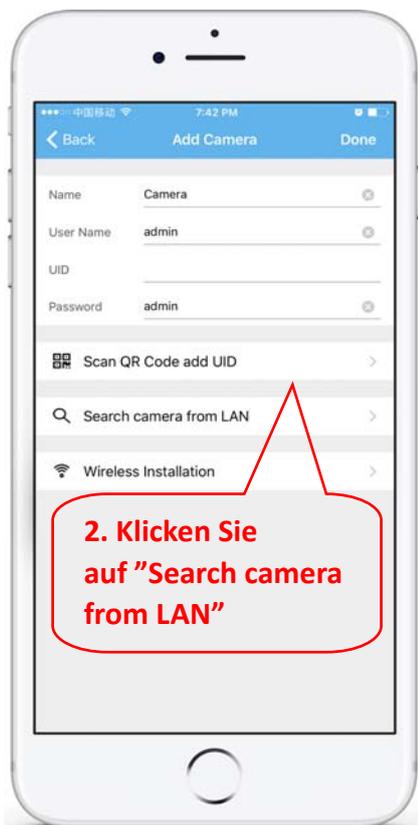

IOS

3.2 Führen Sie APP und Kamera hinzufügen wie unten beschrieben aus. Benennen Sie nach diesem Schritt Ihre Kamera um und beenden Sie den Vorgang

Deutsch

Sie können die UID auch eingeben, indem Sie den QR-Code auf dem Etikett der Kamera scannen (siehe Abbildung unten, falls verfügbar) oder die UID der Kamera manuell über das Etikett der Kamera eingeben (falls verfügbar).

Überprüfen Sie den Standardbenutzernamen und das Standardkennwort und geben Sie sie ein: admin / admin

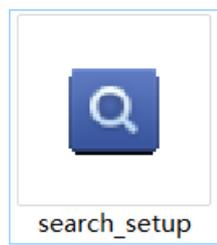

3.3 Klicken Sie nach dem Hinzufügen der Kamera auf Online-Kamera, um das Echtzeitbild anzuzeigen

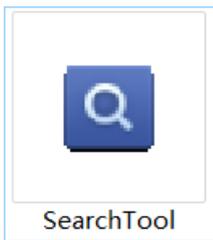

Detaillierte Anweisungen zur CamHi-App finden Sie auf der CD und auf der Produktwebseite www.pni.ro.

4. Kamera vom PC anzeigen

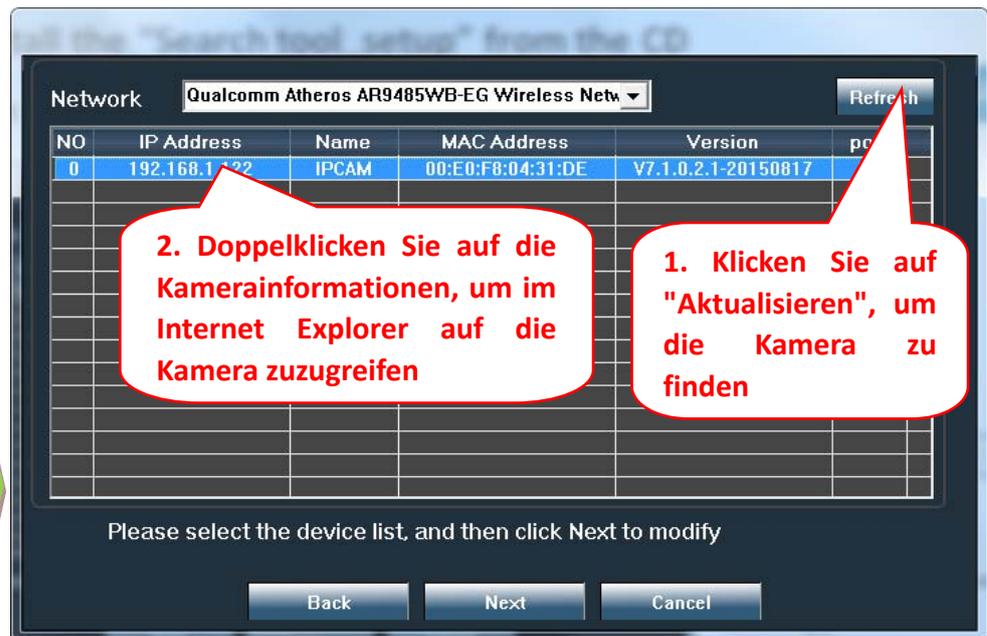

4.1 Installieren Sie für die Produktkonfiguration die Software „Search Tool“ von der CD. Software ausführen und Kamera im LAN suchen (Kamera und PC müssen im selben Netzwerk / Router verbunden sein)

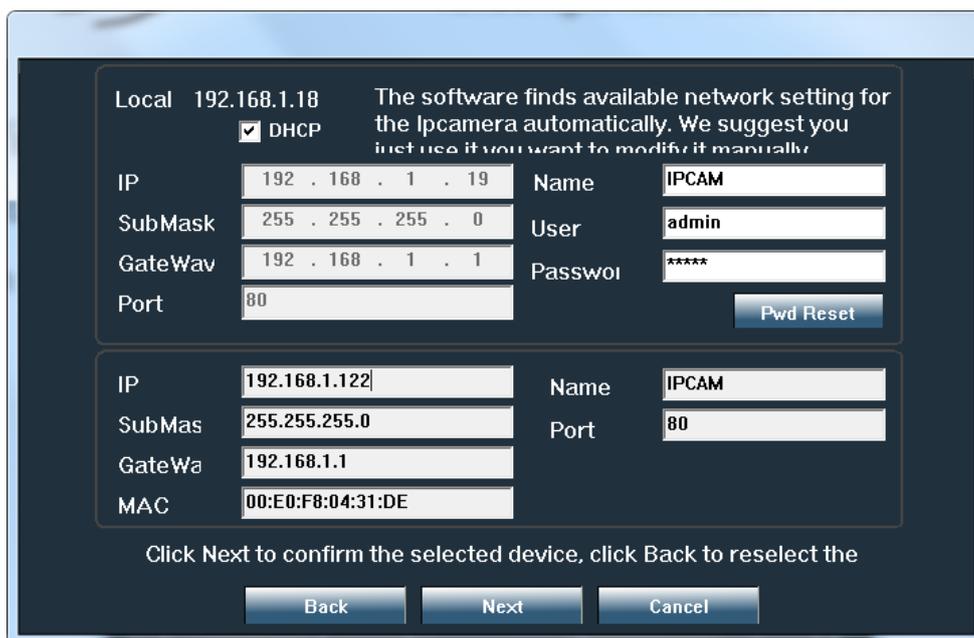

search_setup

SearchTool

Klicken Sie auf „Next“ und Sie können die Netzwerkparameter der Kamera gemäß Ihren Netzwerkeinstellungen ändern. Sie können die DHCP-Einstellung für eine schnellere Konfiguration verwenden

Standardbenutzername:
admin

Standard-Passwort:
admin

4.2 Für den Fernzugriff auf die IP-Kamera über das Internet installieren und verwenden Sie die Software "HiP2P Client" von der CD (für PC / Laptop mit Windows). Die Software ermöglicht die anfängliche Suche und Konfiguration der Kamera im lokalen Netzwerk sowie die erweiterte Konfiguration der Kameraparameter.

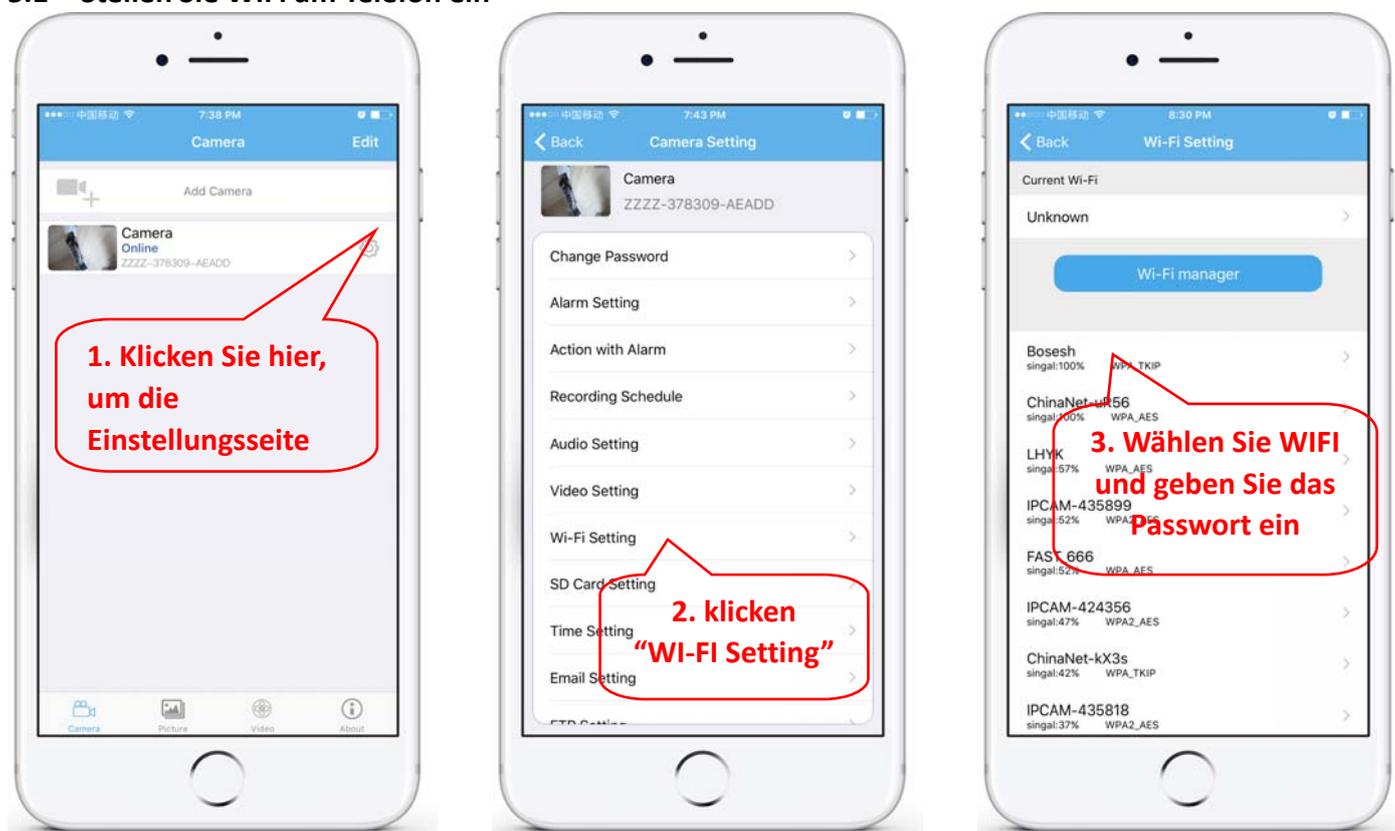

Installationspakete und Anleitungen für die HiP2P-Client-Software sind auf CD oder auf der Website des Verkäufers unter www.pni.ro verfügbar

Hinweis: Auf die Kamera kann auch über den IE-Browser zugegriffen werden, indem IP-Adresse und Port der Kamera eingegeben werden : <http://XXX.XXX.XXX.XXX:80> wobei xx die in SearchTool gefundene IP-Adresse ist.

5. Stellen Sie WIFI ein

5.1 Stellen Sie WIFI am Telefon ein

6.3 Legen Sie den Aufnahmezeitplan für das Telefon fest

6.4 Wiedergabe-Aufzeichnung auf dem Telefon

Diese Parameter können über die HiP2P-Client-Software oder den IE-Browser auf dem PC genauer eingestellt werden!

7. Starten Sie die Werkseinstellungen neu und stellen Sie sie wieder her

7.1 Schließen Sie die Stromversorgung wieder an, um die Kamera neu zu starten

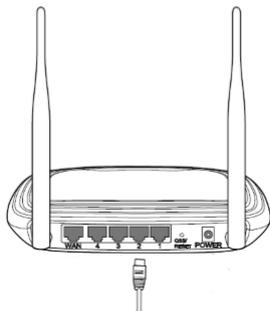

7.2 Halten Sie die Reset-Taste 15 Sekunden lang gedrückt, um die Werkseinstellungen der Kamera wiederherzustellen

Sie können die Kamera auch über ein Mobiltelefon oder einen PC neu starten oder zurücksetzen.

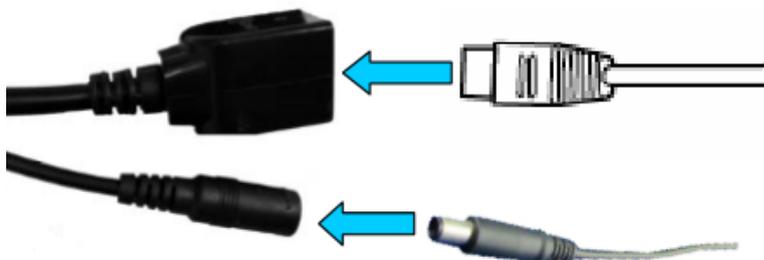

2. Conecta la cámara

2.1 Conecte el cable de red al enrutador y enchufe el adaptador de corriente de la cámara

**¡El enrutador debe poder conectarse a Internet!
Utilice la fuente de alimentación estándar.**

2.2 Conecte el cable de red y la alimentación a la cámara, necesita unos minutos para autoverificarse y luego comenzar a funcionar

Indicador luminoso de red (verde): siempre parpadeando significa que la transmisión de datos de la red es normal

La cámara activará el modo AP cuando la cámara solo esté conectada a la fuente de alimentación. Puede conectarse a la cámara a través del modo AP. Para obtener más información, consulte la documentación de ayuda "Cómo usar el modo AP de la cámara" en la información del CD.

3. Ver a través del teléfono móvil

3.1 Descargue "CamHi" de Google Play Store / Apple App Store o escanee el código QR a continuación para obtener información de la APLICACIÓN

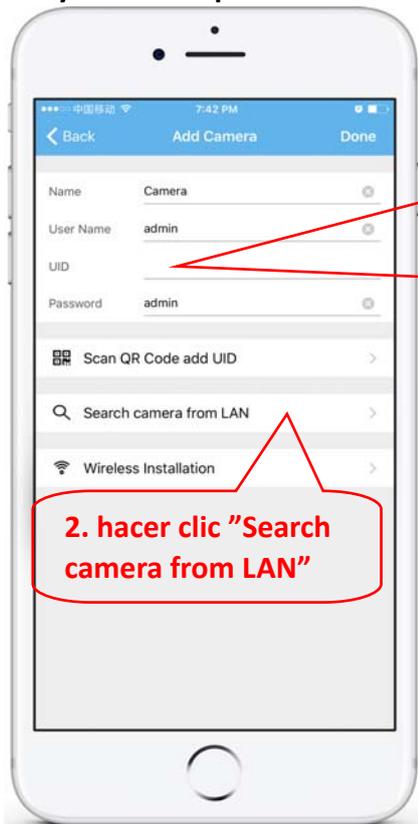

Android

CamHi

IOS

3.2 Ejecute la aplicación y agregue la cámara siguiendo el procedimiento a continuación. Después de este paso, cambie el nombre de su cámara y finalice el procedimiento.

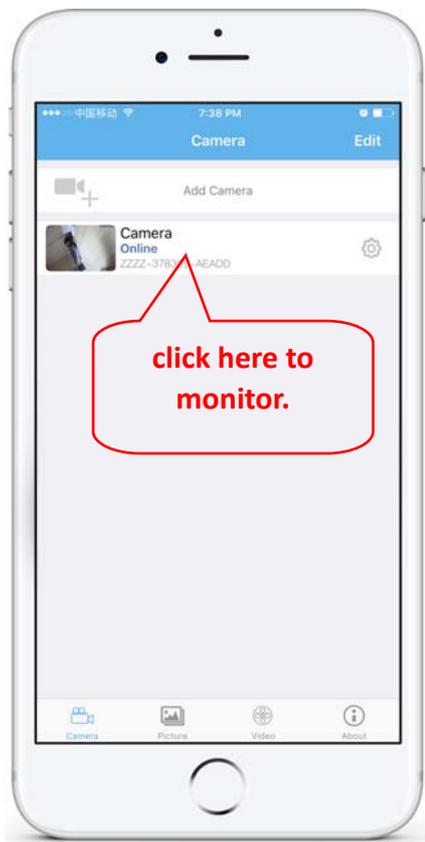

O puede ingresar el UID escaneando el código QR en la etiqueta de la cámara, como se muestra a continuación (si está disponible) o ingresar el UID de la cámara manualmente desde la etiqueta de la cámara (si está

Verifique e ingrese el Nombre de usuario y la Contraseña predeterminados: admin / admin

3.3 Después de agregar la cámara, haga clic en la cámara en línea para ver la imagen en tiempo real

Detailed instructions for CamHi app are available in the CD , and on the product's webpage www.pni.ro.

4. Ver cámara desde PC

4.1 Para la configuración del producto, instale el software "Herramienta de búsqueda" desde el CD. Ejecute el software y busque la cámara en LAN (la cámara y la PC deben estar conectadas en la misma red/enrutador)

The screenshot shows the SearchTool interface. On the left, there are two icons: 'search_setup' and 'SearchTool'. A green arrow points from 'SearchTool' to the main window. The main window displays a network list for 'Qualcomm Atheros AR9485WB-EG Wireless Netw'. The list has columns for NO, IP Address, Name, MAC Address, and Version. The first entry is highlighted: NO 0, IP Address 192.168.1.122, Name IPCAM, MAC Address 00:E0:F8:04:31:DE, Version V7.1.0.2.1-20150817. A 'Refresh' button is in the top right. Below the list, it says 'Please select the device list, and then click Next to modify'. At the bottom are 'Back', 'Next', and 'Cancel' buttons. Two red callout boxes provide instructions: '1. Haga clic en "Refresh" para encontrar la cámara.' and '2. haga doble clic en la información de la cámara para acceder a la cámara en el navegador Internet Explorer'.

Haga clic en "Siguiete" y puede modificar los parámetros de red de la cámara, de acuerdo con su configuración de red. Puede usar la configuración de DHCP para una configuración más rápida.

The screenshot shows the network configuration window. It has two sections. The top section is for DHCP configuration, with 'Local' set to 192.168.1.18 and 'DHCP' checked. The bottom section is for manual configuration, with IP 192.168.1.122, SubMas 255.255.255.0, GateWa 192.168.1.1, MAC 00:E0:F8:04:31:DE, Name IPCAM, and Port 80. There are 'Back', 'Next', and 'Cancel' buttons at the bottom. A note says 'Click Next to confirm the selected device, click Back to reselect the'.

Nombre de usuario
predeterminado:
admin
Contraseña
predeterminada:
admin

4.2 Para acceder de forma remota a la cámara IP a través de Internet, instale y use el software "HiP2P Client" desde el CD (para PC / Laptop con Windows). El software permite la búsqueda inicial y la configuración de la cámara en la red local y la configuración avanzada de los parámetros de la cámara..

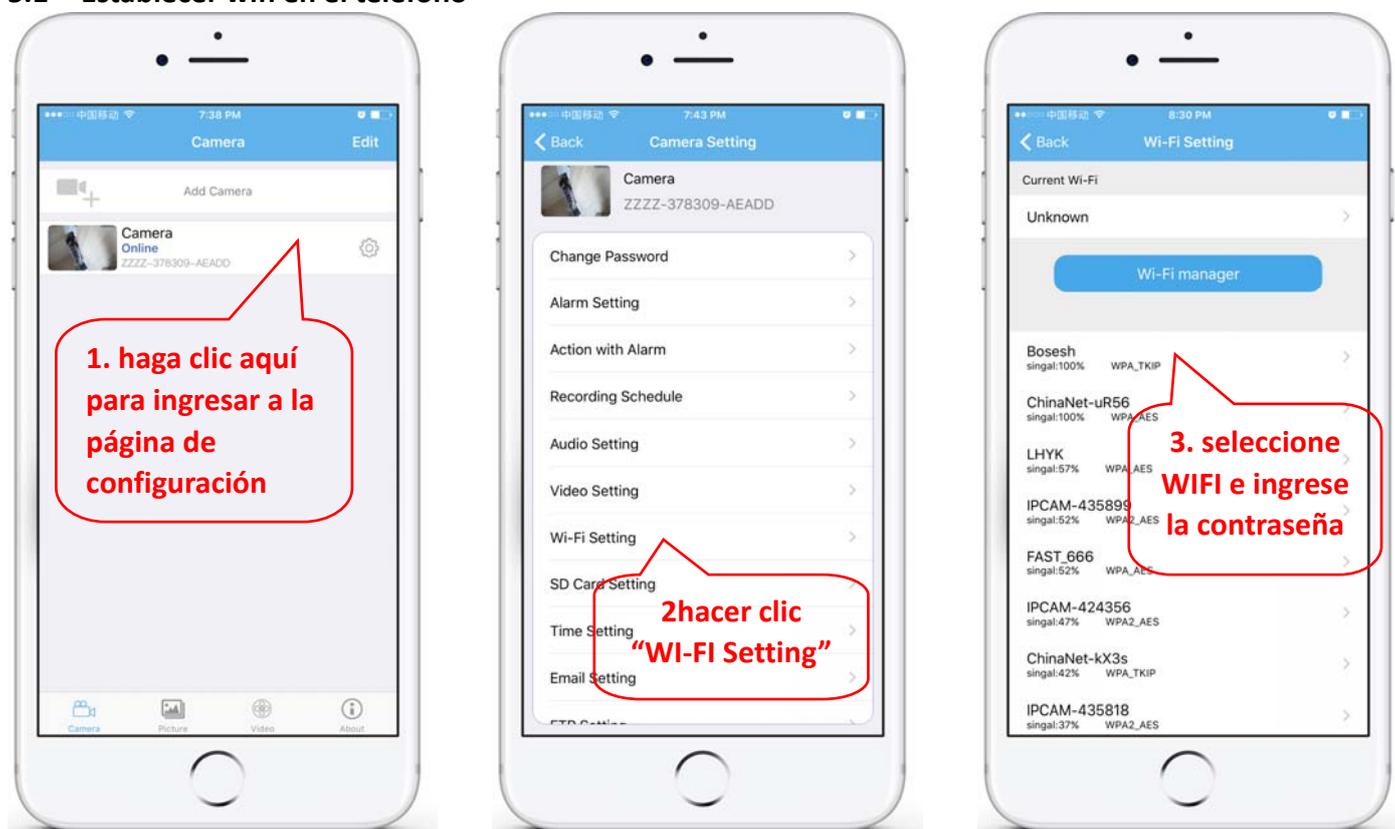

Los paquetes e instrucciones de instalación del software HiP2P Client están disponibles en CD o en la página web del vendedor www.pni.ro

Nota: También se puede acceder a la cámara desde el navegador IE ingresando la IP y el puerto de la cámara: <http://XXX.XXX.XXX.XXX:80> donde xx es la dirección IP que se encuentra en SearchTool.

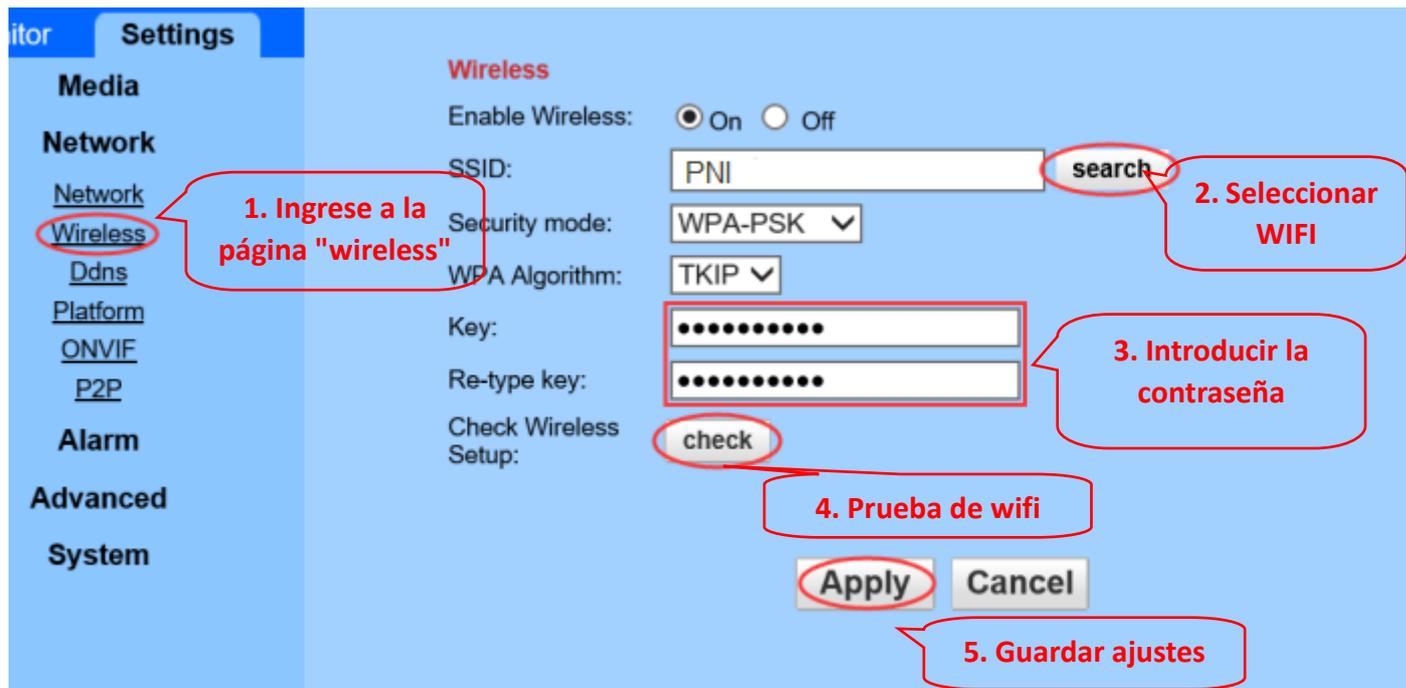

5. Establecer wifi

5.1 Establecer wifi en el teléfono

5.2 Establecer WIFI a través del navegador en la PC

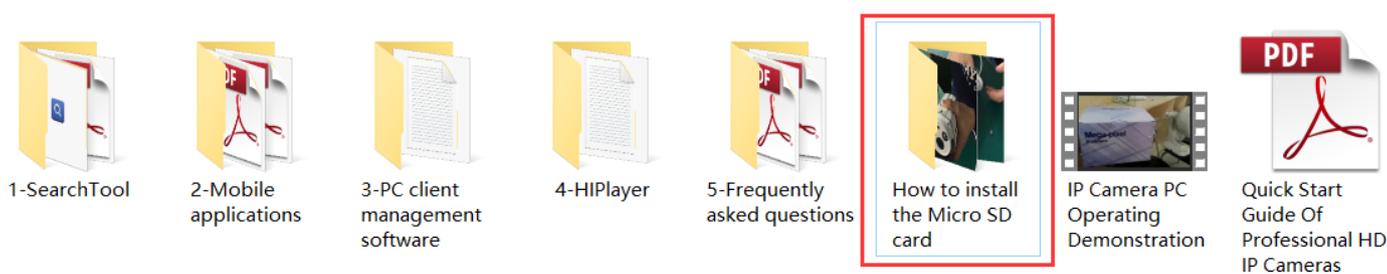

El enrutador WIFI debe tener un valor de señal superior al 50% y el nombre WIFI debe ser inglés y no puede contener caracteres especiales.

Una vez completada la configuración de WIFI, la cámara cambiará automáticamente a la conexión WIFI cuando se desconecte el cable de red.

6.6. Establecer registro de tarjeta Micro SD

6.1 Encuentre los tutoriales de instalación de la tarjeta Micro SD de la cámara desde el CD e instale la tarjeta Micro SD en la cámara

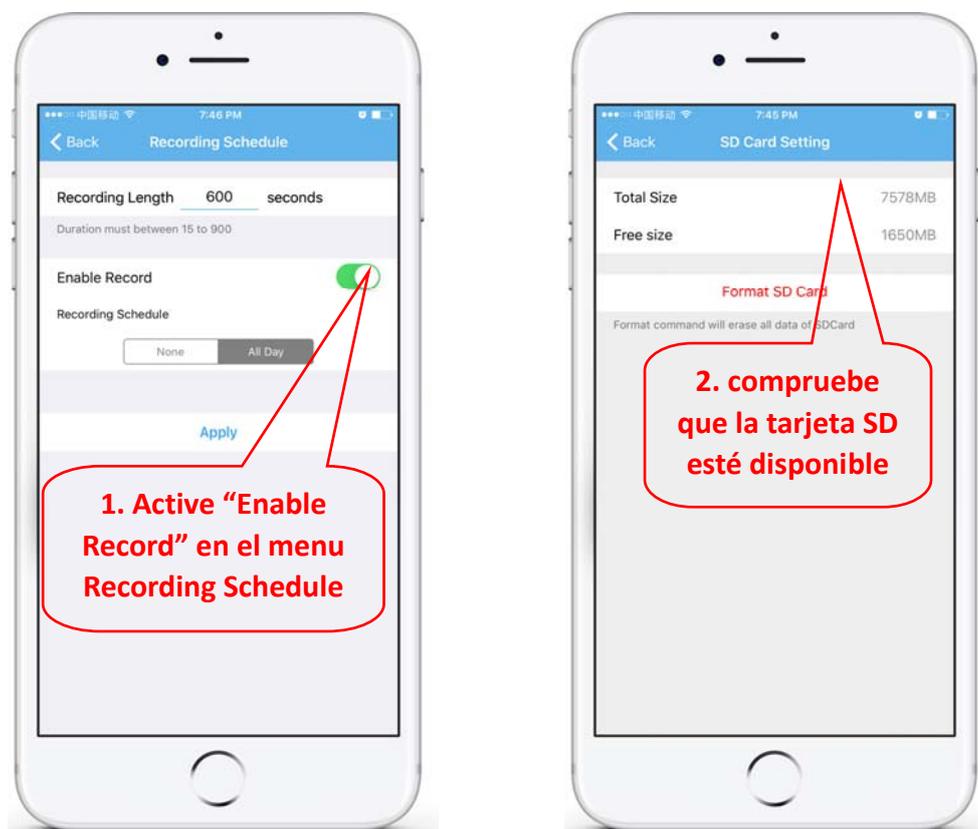

6.2 Configurar la grabación de alarma de detección de movimiento desde la aplicación del teléfono

Se recomienda la grabación de alarma de detección de movimiento cuando la tarjeta Micro SD es pequeña.

De esta manera, la cámara solo grabará video en la tarjeta SD cuando se detecte movimiento en el campo de visión de la cámara.

6.3 Establecer programación de grabación en teléfono

6.4 Playback record on phone

¡Estos parámetros se pueden configurar con más detalle a través del software de cliente HiP2P o el navegador IE en la PC!

7. Reiniciar y restaurar la configuración de fábrica

7.1 Vuelva a conectar la alimentación para reiniciar la cámara.

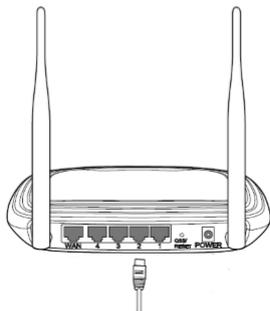

7.2 Mantenga presionado el botón de reinicio durante 15 segundos y la cámara restaurará la configuración de fábrica

También puede reiniciar o restablecer la cámara a través de un teléfono móvil o PC.

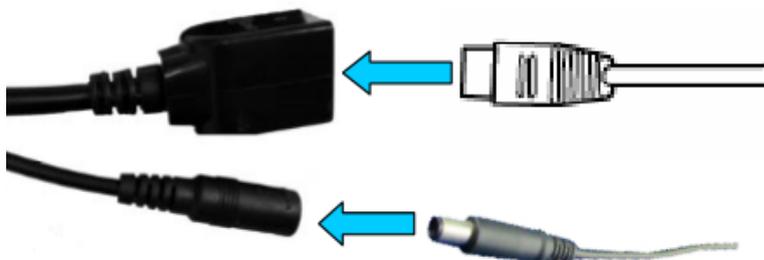

2. Connecter la caméra

2.1 Connectez le câble réseau au routeur et branchez l'adaptateur d'alimentation de la caméra

**Le routeur doit pouvoir se connecter à Internet!
Veuillez utiliser l'alimentation standard.**

2.2 Connectez le câble réseau et mettez la caméra sous tension. Quelques minutes sont nécessaires pour l'auto-vérification, puis commencer à fonctionner.

Voyant réseau (vert): toujours clignotant, la transmission de données sur le réseau est normale

La caméra active le mode AP lorsque la caméra est uniquement connectée à l'alimentation. Vous pouvez vous connecter à la caméra via le mode AP. Pour plus de détails, veuillez consulter la documentation d'aide «Comment utiliser le mode AP de la caméra» dans les informations du CD.

3. Afficher via un téléphone mobile

3.1 Téléchargez «CamHi» sur le Google Play Store / Apple App Store ou scannez le code QR ci-dessous pour obtenir des informations sur l'application

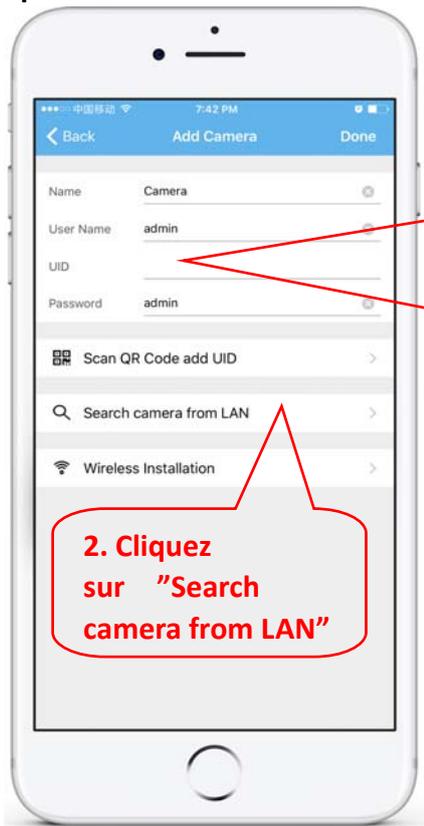

Android

CamHi

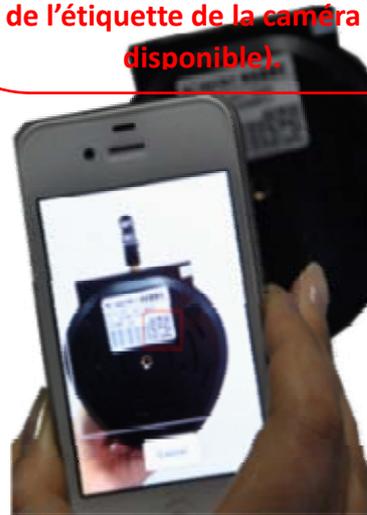

IOS

3.2 Exécutez APP et Add Camera en suivant la procédure ci-dessous. Après cette étape, renommez votre appareil photo et terminez la procédure.

Ou vous pouvez entrer l'UID en scannant le code QR sur l'étiquette de la caméra, comme indiqué ci-dessous (si disponible) ou entrer l'UID de la caméra manuellement à partir de l'étiquette de la caméra (si disponible).

Vérifiez et entrez le nom d'utilisateur et le mot de passe par défaut: admin / admin

3.3 Après avoir ajouté la caméra, cliquez sur la caméra en ligne pour afficher une image en temps réel.

Des instructions détaillées pour l'application CamHi sont disponibles sur le CD et sur la page Web du produit www.pni.ro.

4. Voir la caméra depuis le PC

4.1 Pour la configuration du produit, installez le logiciel «Search Tool» à partir du CD. Exécuter le logiciel et rechercher la caméra en réseau local (la caméra et le PC doivent être connectés au même réseau / routeur)

search_setup

SearchTool

NO	IP Address	Name	MAC Address	Version	po
0	192.168.1.122	IPCAM	00:E0:F8:04:31:DE	V7.1.0.2.1-20150817	

Please select the device list, and then click Next to modify

Back Next Cancel

Cliquez sur «Suivant» pour modifier les paramètres réseau de la caméra en fonction de vos paramètres réseau. Vous pouvez utiliser le paramètre DHCP pour une configuration plus rapide.

4.2 Pour accéder à distance à la caméra IP via Internet, installez et utilisez le logiciel "HiP2P Client" à partir du CD (pour PC / ordinateur portable sous Windows). Le logiciel permet la recherche initiale et la configuration de la caméra dans le réseau local et la configuration avancée des paramètres de la caméra.

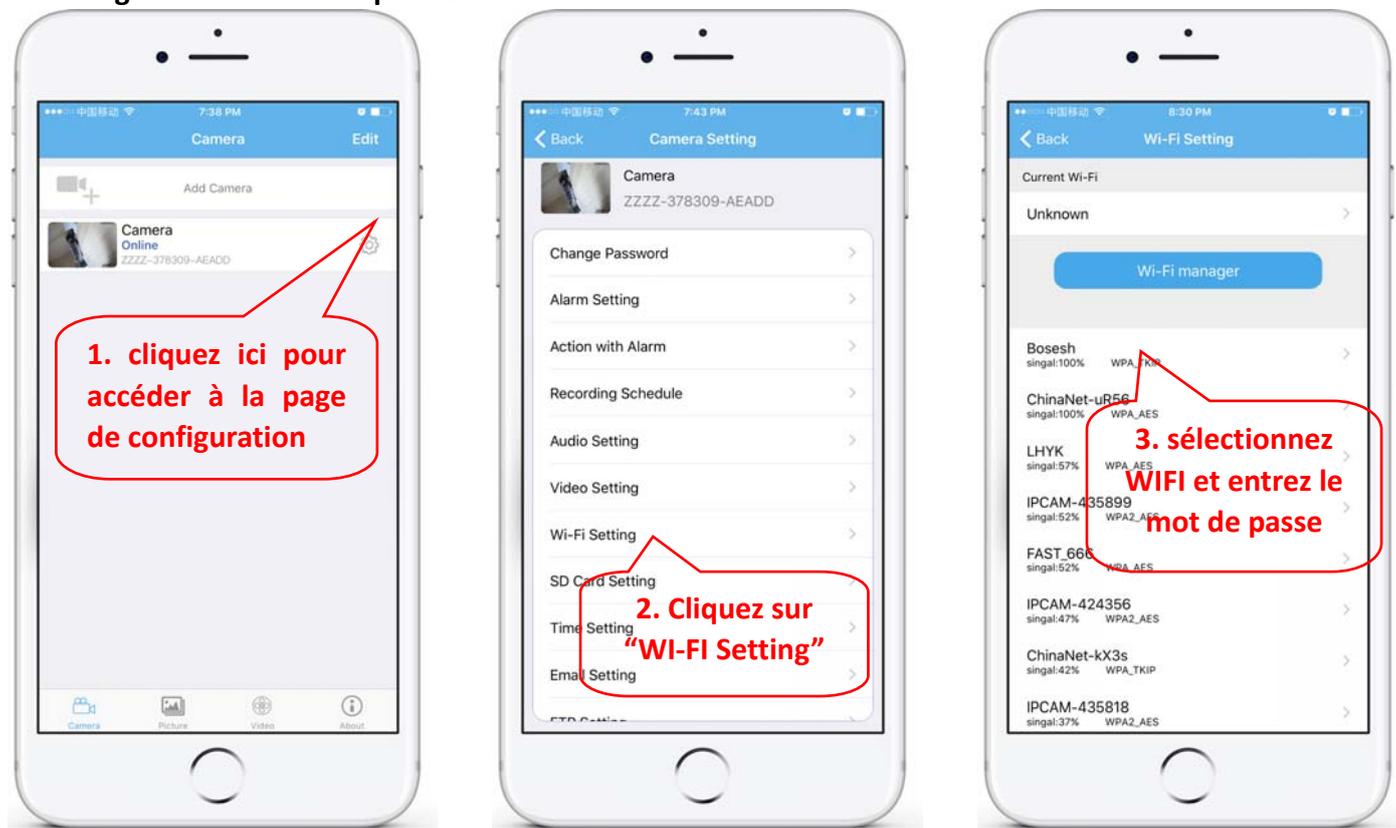

Les packages d'installation du logiciel HiP2P Client et les instructions sont disponibles sur CD ou sur la page Web du vendeur www.pni.ro

Remarque: il est également possible d'accéder à la caméra à partir du navigateur IE en entrant l'adresse IP et le port de la caméra: <http://XXX.XXX.XXX.XXX:80> où xx est l'adresse IP trouvée dans SearchTool.

5. Set WIFI

5.1 Réglez WIFI sur le téléphone

5.2 Réglez WIFI via un navigateur sur PC

The screenshot shows the 'Wireless' settings page in a web browser. The left sidebar has 'Wireless' selected. The main area shows 'Enable Wireless' set to 'On', 'SSID' as 'PNI', 'Security mode' as 'WPA-PSK', and 'WPA Algorithm' as 'TKIP'. There are two password fields, a 'check' button, and 'Apply' and 'Cancel' buttons at the bottom. Red callouts with numbers 1-5 point to: 1. 'Wireless' in the sidebar; 2. 'search' button; 3. the password fields; 4. 'check' button; 5. 'Apply' button.

Le routeur WIFI doit avoir une valeur de signal supérieure à 50% et le nom WIFI doit être en anglais et ne peut pas contenir de caractères spéciaux.

Une fois le réglage WIFI terminé, la caméra passe automatiquement à la connexion WIFI lorsque le câble réseau est débranché.

6. Définir l'enregistrement sur carte Micro SD

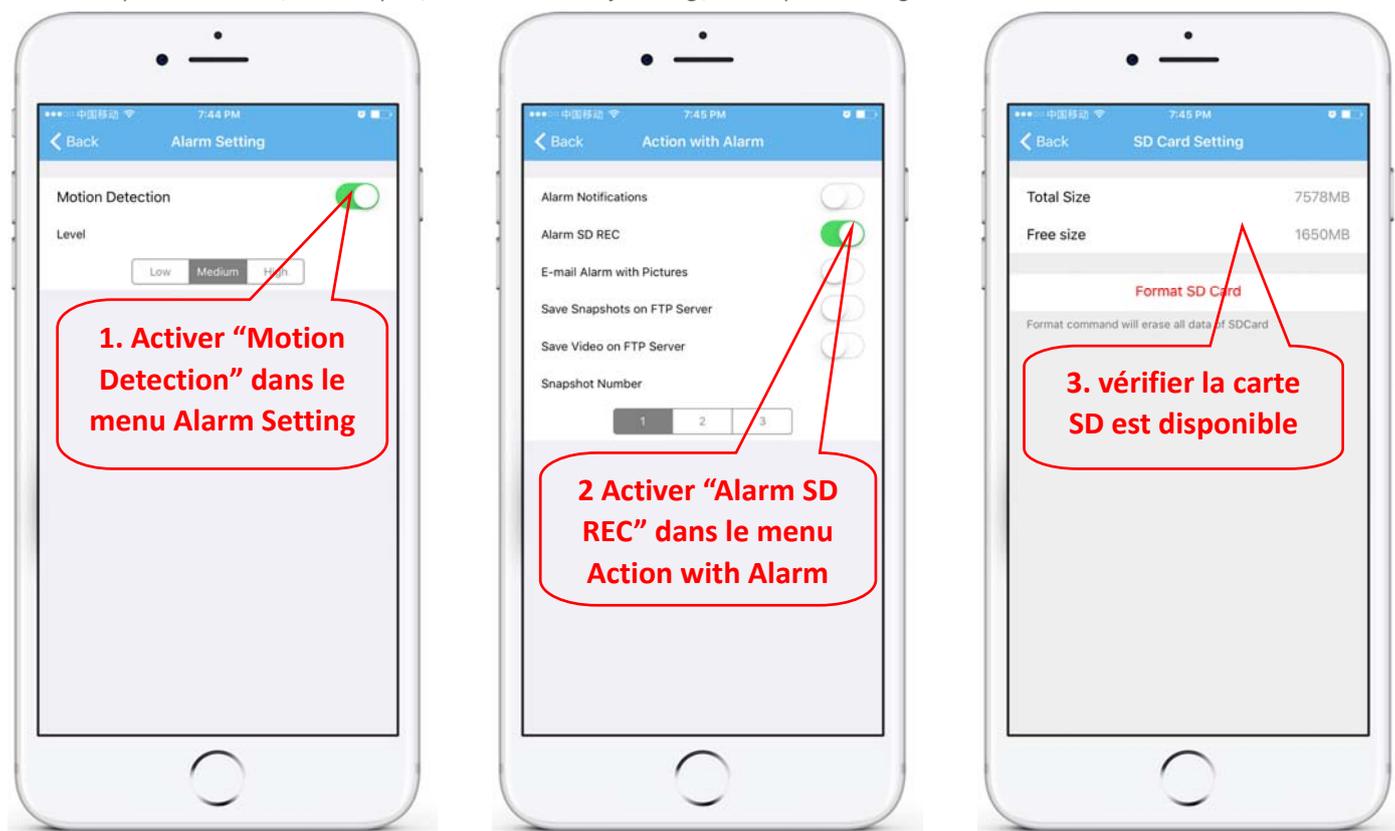

6.4 Recherchez les didacticiels d'installation de la carte Micro SD de la caméra à partir du CD et installez la carte Micro SD sur la caméra.

A row of software icons: 1-SearchTool, 2-Mobile applications, 3-PC client management software, 4-HIPlayer, 5-Frequently asked questions, 'How to install the Micro SD card' (highlighted with a red box), IP Camera PC Operating Demonstration, and Quick Start Guide Of Professional HD IP Cameras.

6.5 Définir l'enregistrement d'alarme de détection de mouvement à partir de l'application du téléphone

L'enregistrement d'alarme de détection de mouvement est recommandé lorsque la carte Micro SD est petite.

De cette façon, la caméra n'enregistrera la vidéo sur la carte SD que lorsqu'un mouvement est détecté dans le champ de vision de la caméra. .

6.6 Définir l'enregistrement programmé sur le téléphone

6.7 Enregistrement de lecture sur le téléphone

Ces paramètres peuvent être réglés plus en détail via le logiciel client HiP2P ou le navigateur IE sur le PC!

7. Redémarrer et restaurer les paramètres d'usine

7.1 Rebranchez le courant pour redémarrer la caméra

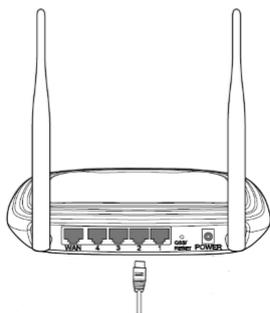

7.2 Appuyez sur le bouton de réinitialisation et maintenez-le enfoncé pendant 15 secondes pour rétablir les paramètres d'usine.

Also you can restart or reset the camera via mobile phone or PC.

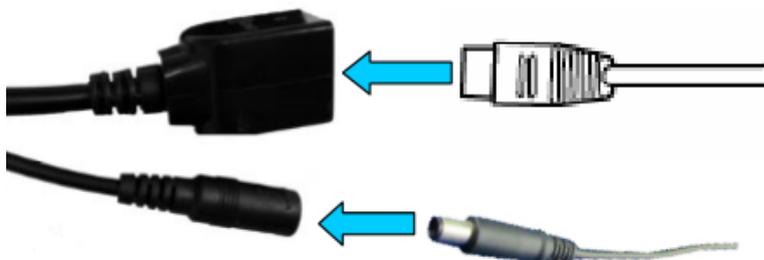

2. Csatlakoztassa a kamerát

2.1 Csatlakoztassa a hálózati kábelt az útválasztóhoz és csatlakoztassa a kamera hálózati adapterét

**A routernek képesnek kell lennie arra, hogy csatlakozzon az internethez!
Kérjük, használja a szokásos tápegységet.**

2.2 Csatlakoztassa a hálózati kábelt és a tápfeszültséget a fényképezőgéphez. Ehhez körülbelül néhány percre van szüksége az önellenőrzéshez, majd a munka megkezdéséhez

Hálózati jelzőfény (zöld): mindig villog: a hálózati adatátvitel normál

A kamera akkor kapcsolja be az AP módot, ha a kamerát csak az áramellátáshoz csatlakoztatja. Csatlakozhat a kamerához AP módban. A részleteket lásd a „Hogyan használjuk a kamera AP üzemmódját” című súgóban a CD-leírásban.

3. Megtekintés mobiltelefonon keresztül

3.1 Töltse le a „CamHi” fájlt a Google Play Áruházból / az Apple App Store áruházból, vagy olvassa be az alábbi QR-kódot, hogy APP-információkat kapjon

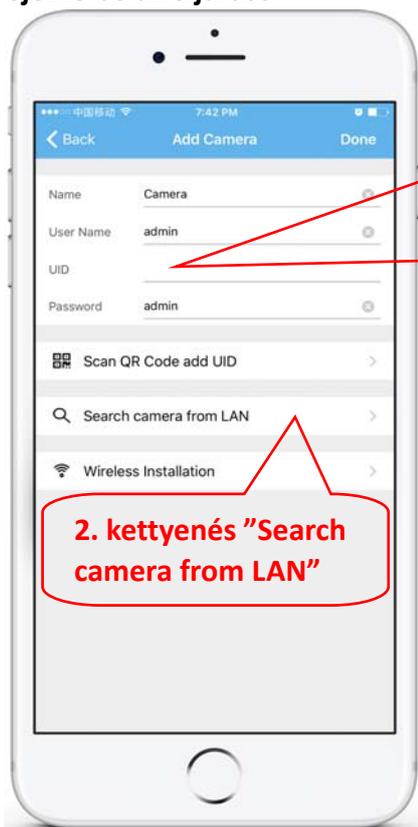

Android

CamHi

IOS

3.2 Futtassa az APP és a Kamera hozzáadása elemet az alábbi eljárás szerint. Ezt a lépést követően nevezze át a fényképezőgépet, és fejezze be az eljárást

Vagy beírhatja az UID-t a QR-kód beolvasásával a fényképezőgép címkéjén, az alább látható módon (ha rendelkezésre áll), vagy manuálisan adja meg a kamera UID-jét a kamera címkéjéből (ha rendelkezésre áll).

Ellenőrizze és írja be az Alapértelmezett felhasználónevet és jelszót: admin / admin

3.3 A kamera hozzáadása után kattintson az online kamera elemre a valós idejű kép megtekintéséhez

A CamHi alkalmazásra vonatkozó részletes utasítások megtalálhatók a CD-n és a termék weboldalán, a www.pni.ro.

4. Tekintse meg a kamerát a számítógépről

4.1 A termékkonfigurációhoz telepítse a „Kereső eszköz” szoftvert a CD-ről. Futtasson szoftvert és kamerát a LAN-on (a kamerának és a PC-nek ugyanabban a hálózatban / útválasztón kell csatlakozni)

search_setup

SearchTool

NO	IP Address	Name	MAC Address	Version	pp
0	192.168.1.122	IPCAM	00:E0:F8:04:31:DE	V7.1.0.2.1-20150817	

Please select the device list, and then click Next to modify

Back Next Cancel

Refresh

1. Kattintson a "Refresh" hogy megtalálja a kamerát

2. kattintson duplán a fényképezőgép adataira a kamera eléréséhez az Internet Explorer böngészőben

Kattintson a „Next” gombra, és a kamera hálózati paramétereit a hálózati beállításoknak megfelelően módosíthatja. A DHCP beállítást a gyorsabb konfigurációhoz használhatja.

Local 192.168.1.18

4.2 Annak érdekében, hogy távolról érje el az IP-kamerát az interneten keresztül, telepítse és használja a „HiP2P Client” szoftvert CD-ről (PC-re / laphoz Windows-on). A szoftver lehetővé teszi a kamera kezdeti keresését és konfigurálását a helyi hálózaton, valamint a kamera paramétereinek speciális konfigurálását.

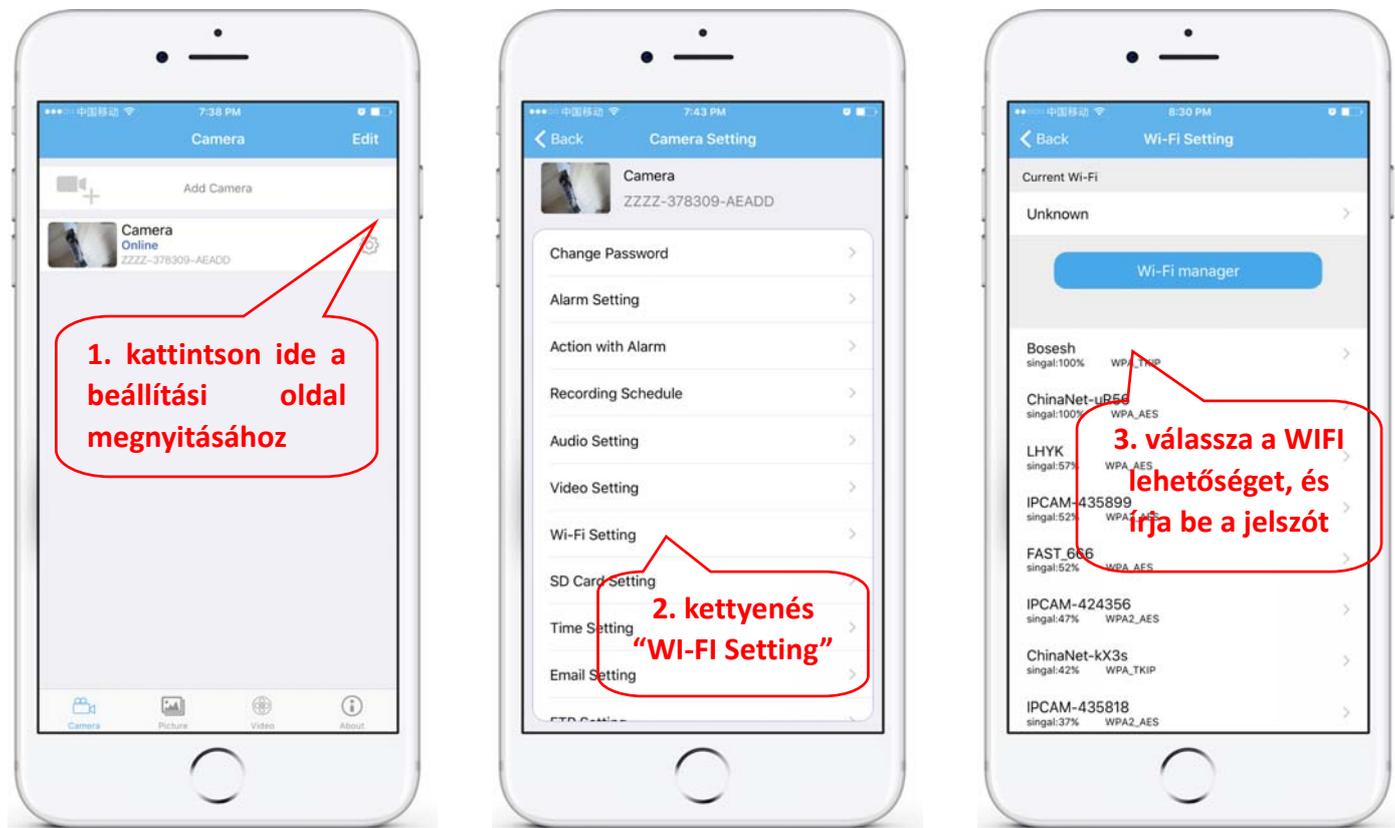

A HiP2P Client szoftver telepítési csomagjai és útmutatásai elérhetők CD-n vagy az eladó weboldalán a www.pni.ro

Megjegyzés: A kamera az IE böngészőből érhető el az IP és a kamera portjának megadásával: <http://XXX.XXX.XXX.XXX:80> ahol xx a SearchTool-ban található IP-cím.

5. Állítsa be a WIFI-t

5.1 Állítsa be a WIFI-t telefonon

5.2 Állítsa be a WIFI-t a PC böngészőjén keresztül

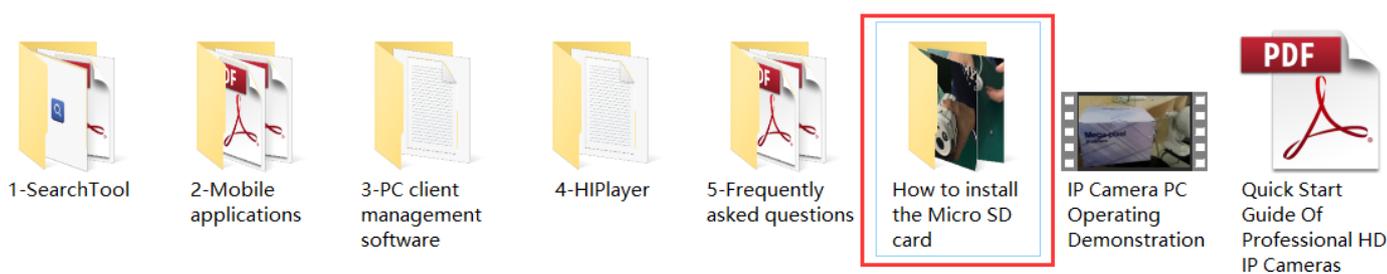

The screenshot shows the 'Wireless' settings page in a web browser. The left sidebar has 'Wireless' selected. The main area has 'Enable Wireless' set to 'On', 'SSID' set to 'PNI', 'Security mode' set to 'WPA-PSK', and 'WPA Algorithm' set to 'TKIP'. There are two password fields, one with a 'check' button below it. At the bottom are 'Apply' and 'Cancel' buttons. Red callouts with numbers 1-5 point to these elements: 1. 'Wireless' in the sidebar; 2. 'search' button; 3. the password fields; 4. the 'check' button; 5. the 'Apply' button.

A WIFI router 50% -nál nagyobb jelértékkel kell rendelkeznie, a WIFI névnek angolnak kell lennie, és nem tartalmazhat speciális karaktereket.

A WIFI-beállítás befejezése után a fényképezőgép automatikusan WIFI-kapcsolatra vált, amikor a hálózati kábel ki van húzva.

6.6. Állítsa be a Micro SD kártya rekordját

6.1 Keresse meg a fényképezőgép Micro SD kártya telepítési útmutatásait a CD-ről, és telepítse a Micro SD kártyát a kamera

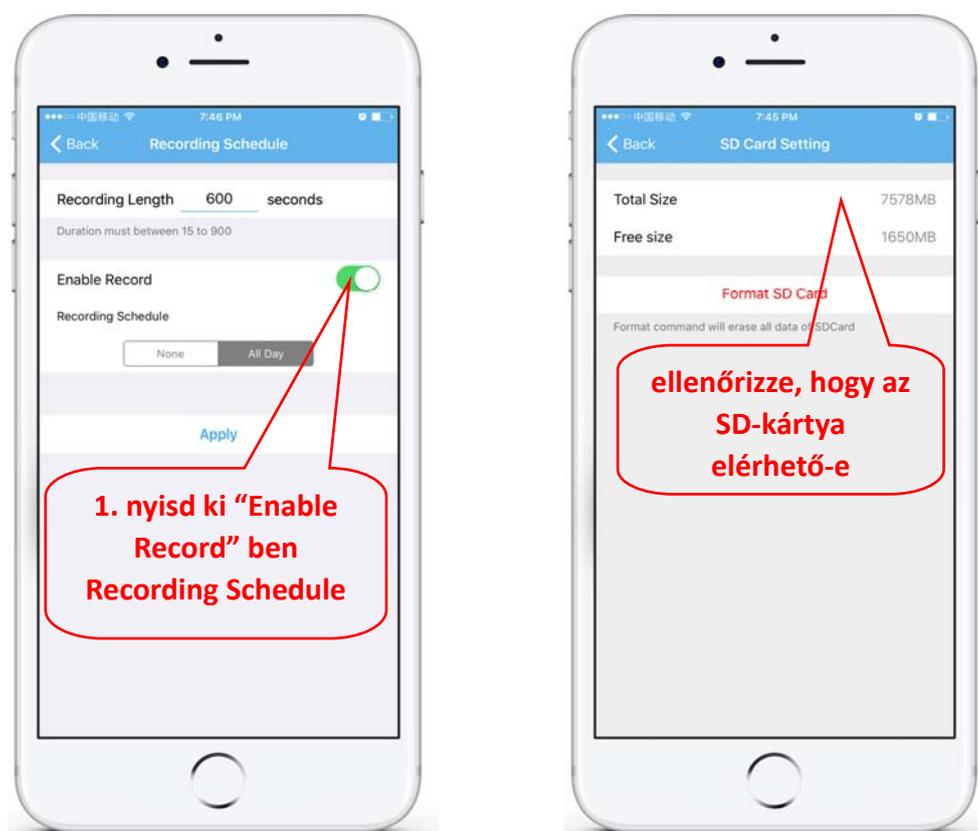

6.2 Állítsa be a mozgásérzékelő riasztás rögzítését a telefon alkalmazásból

A mozgásérzékelő riasztás rögzítése akkor ajánlott, ha a Micro SD kártya kicsi. Ilyen módon a kamera csak akkor rögzít videót az SD kártyára, ha mozgást észlel a kamera látómezejében .

6.3 Állítsa be az ütemezett felvételt telefonon

6.4 Playback record on phone

Ezeket a paramétereket részletesebben beállíthatjuk a HiP2P Client Software vagy a PC IE böngészőjében!

7. Indítsa újra és állítsa vissza a gyári beállításokat

7.1 Csatlakoztassa újra a kamerát a kamera újraindításához

7.2 Tartsa nyomva a reset gombot 15 másodpercig, és a fényképezőgép visszaáll a gyári beállításokra

A fényképezőgépet mobiltelefonon vagy számítógépen is újraindíthatja vagy visszaállíthatja.

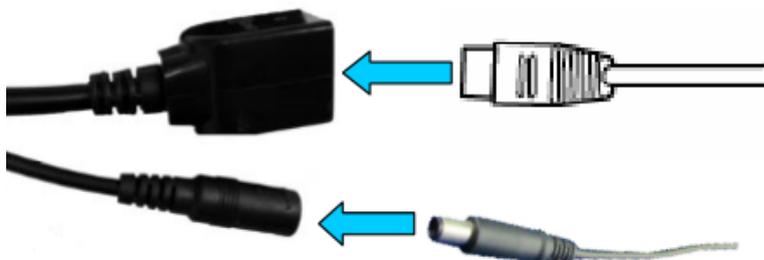

2. Connessione della telecamera

2.1 Collegare il cavo di alimentazione al router e l'alimentatore a una presa da 230 V

Il router deve essere collegato a Internet!
Si prega di utilizzare l'alimentatore standard.

2.2 Collegare il cavo di rete e di alimentazione alla telecamera; Sono necessari circa 2 minuti per l'autotaratura, dopodiché la telecamera passa alla modalità di funzionamento normale

Indicatore di rete (verde) lampeggiante significa che la trasmissione dei dati di rete è normale

La telecamera si avvierà in modalità AP quando è collegata solo alla fonte di alimentazione. È possibile connettersi direttamente alla telecamera tramite la modalità AP. Per ulteriori dettagli, consultare la documentazione della guida "Come utilizzare la modalità AP della telecamera" sul CD incluso nella confezione.

3. Configurazione/visualizzazione sullo smartphone

3.1 Scarica e installa l'app "CamHi" dal Google Play Store / App Store di Apple o scansiona il codice QR qui sotto per ottenere informazioni sull'applicazione

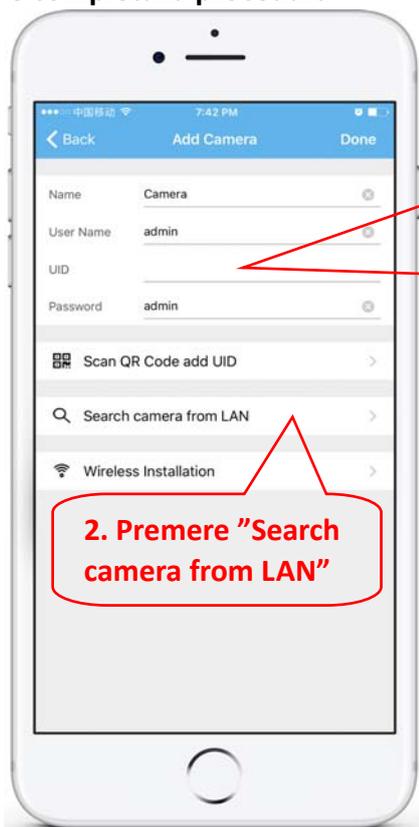

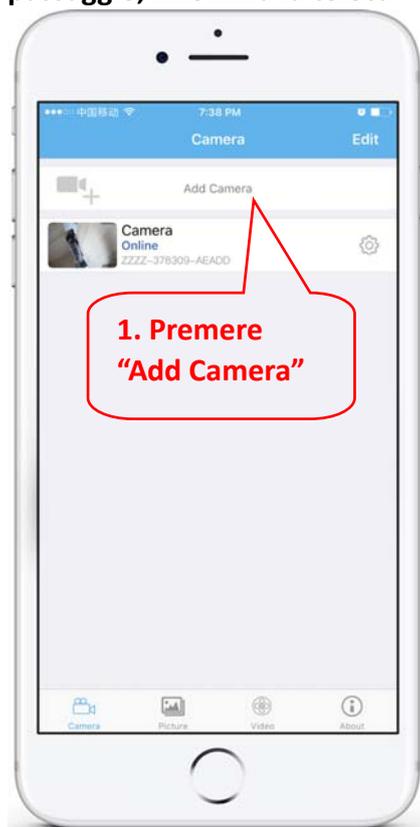

Android

IOS

3.2 Esegui l'applicazione e aggiungi la telecamera seguendo la procedura seguente. Dopo questo passaggio, rinomina la telecamera e completa la procedura

Oppure puoi inserire l'UID della telecamera scansionando il codice QR sull'etichetta della telecamera, come mostrato di seguito (se disponibile) o inserire manualmente l'UID)

Immettere o verificare l'esistenza dei dati di autenticazione di fabbrica: User Name : admin / Password: admin

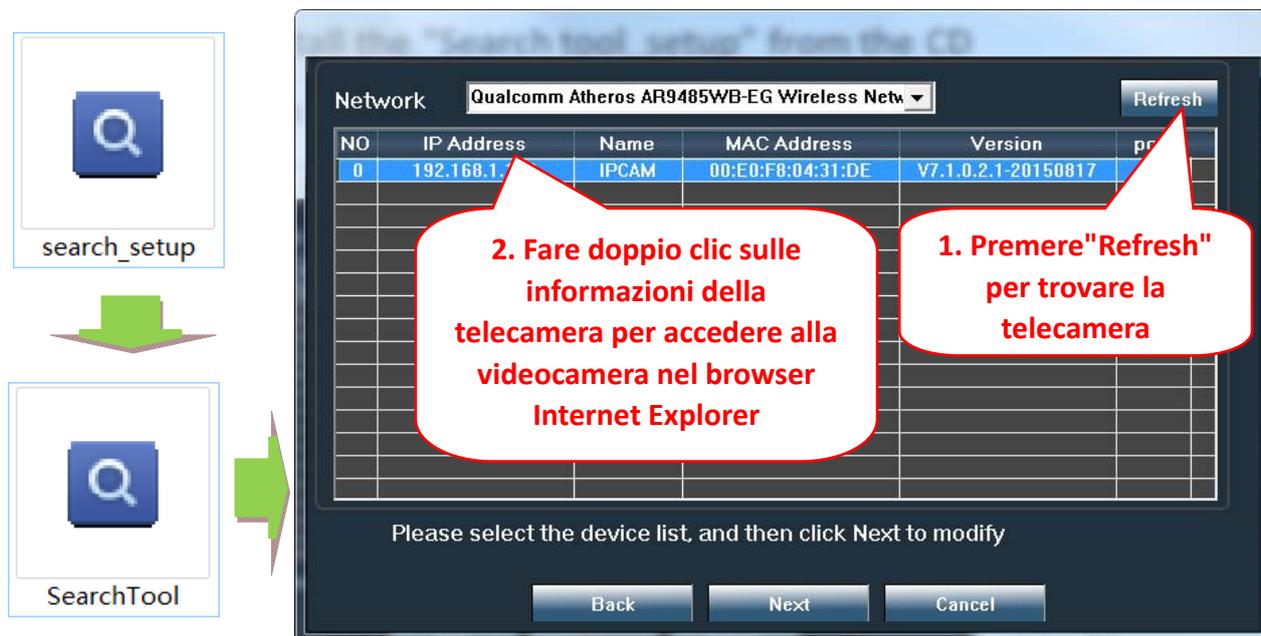

3.3 Dopo aver aggiunto la telecamera, fai clic su di essa nell'app per visualizzare l'immagine in tempo reale

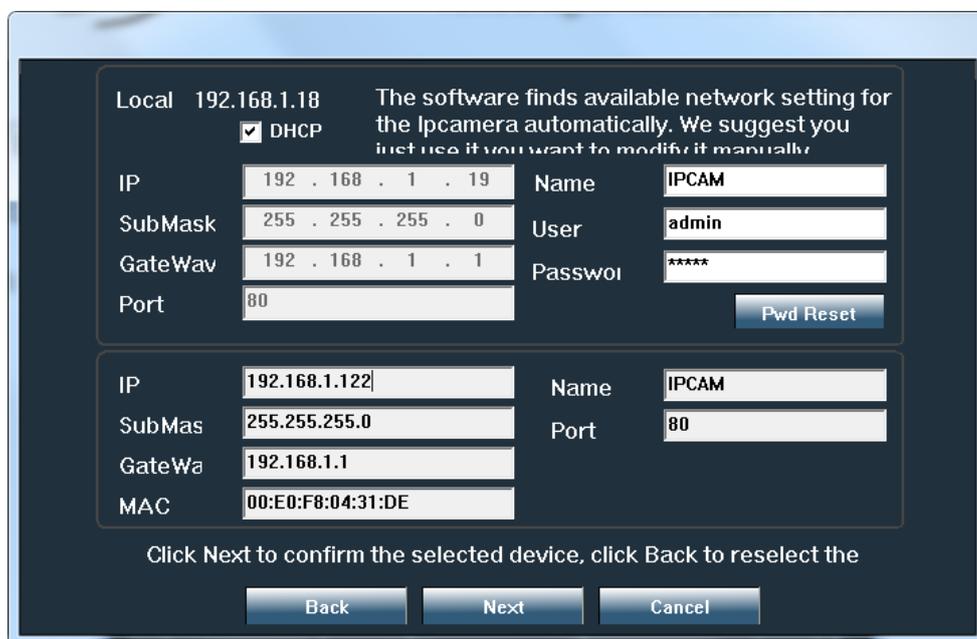

Istruzioni dettagliate per l'applicazione CamHi sono disponibili sul CD e sulla pagina Web del prodotto.

4. Visualizzare la telecamera sul PC

4.1 Installare l'applicazione "Search tool" (il file eseguibile si può trovare sul CD incluso nella confezione). Apri l'applicazione e cerca la telecamera nella rete locale (il router a cui sono collegati entrambi i dispositivi, telecamera e PC).

Fai clic su "Next" e puoi modificare le impostazioni di rete della videocamera, a seconda delle impostazioni di rete. Un'opzione rapida è selezionare la casella "DHCP" e fare clic su "Avanti" per la configurazione automatica della rete.

**Utente predefinito

admin
Password predefinita
(Default password):
admin**

4.2 Per accedere alla telecamera da remoto tramite Internet, installare e utilizzare il software "HiP2P Client" per Windows (il file eseguibile si può trovare sul CD incluso nella confezione). Il software consente la ricerca e la configurazione della telecamera nella rete locale e la configurazione avanzata dei parametri della telecamera.

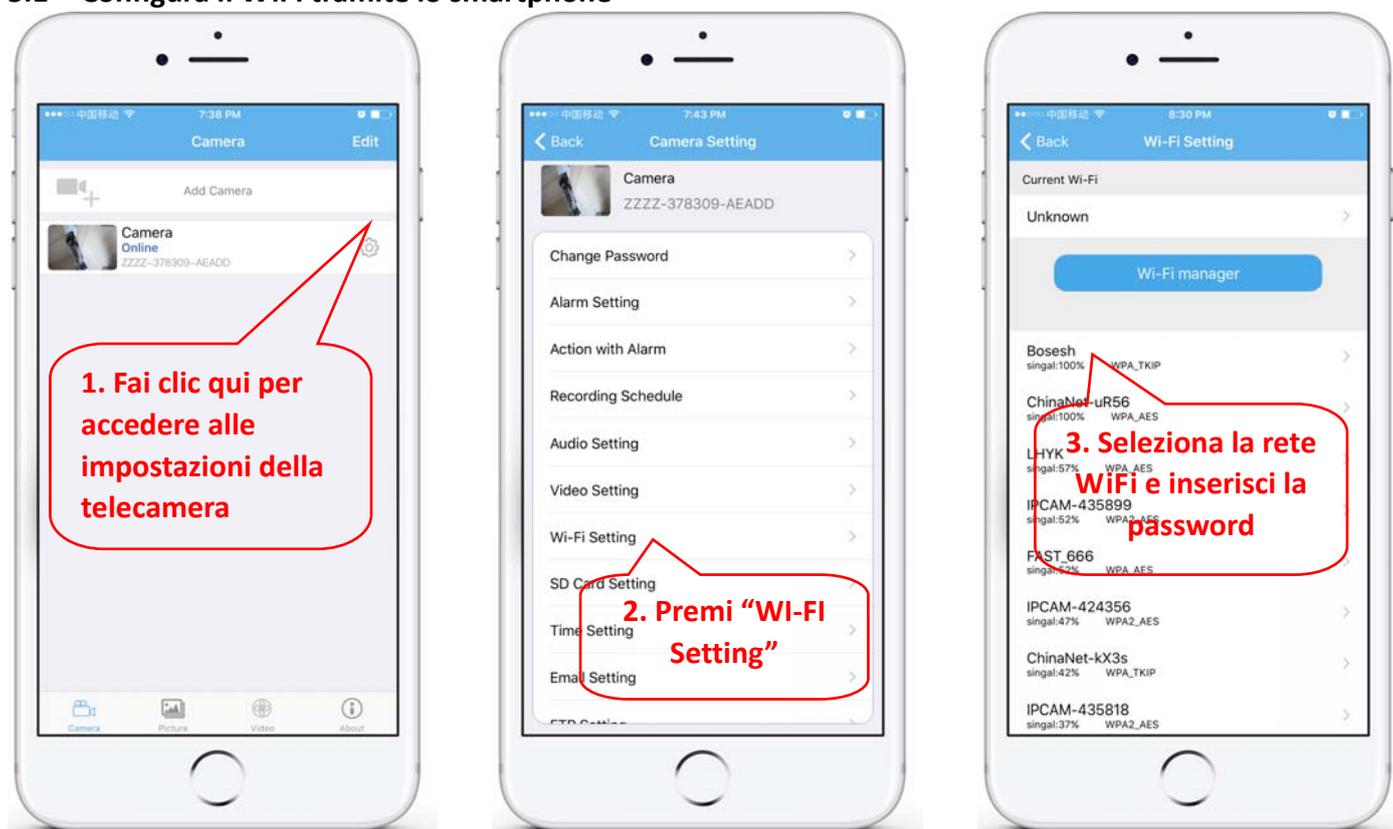

Istruzioni dettagliate sull'installazione e l'uso del software "HiP2P Client" sono disponibili sul CD o sul sito Web del venditore: www.pni.ro

Notifiche: Facoltativamente nella stessa rete locale, è possibile accedere alla telecamera anche dal browser immettendo l'indirizzo IP e la porta della telecamera all'indirizzo: <http://XXX.XXX.XXX.XXX:80> dove xx è l'indirizzo IP identificato tramite SearchTool.

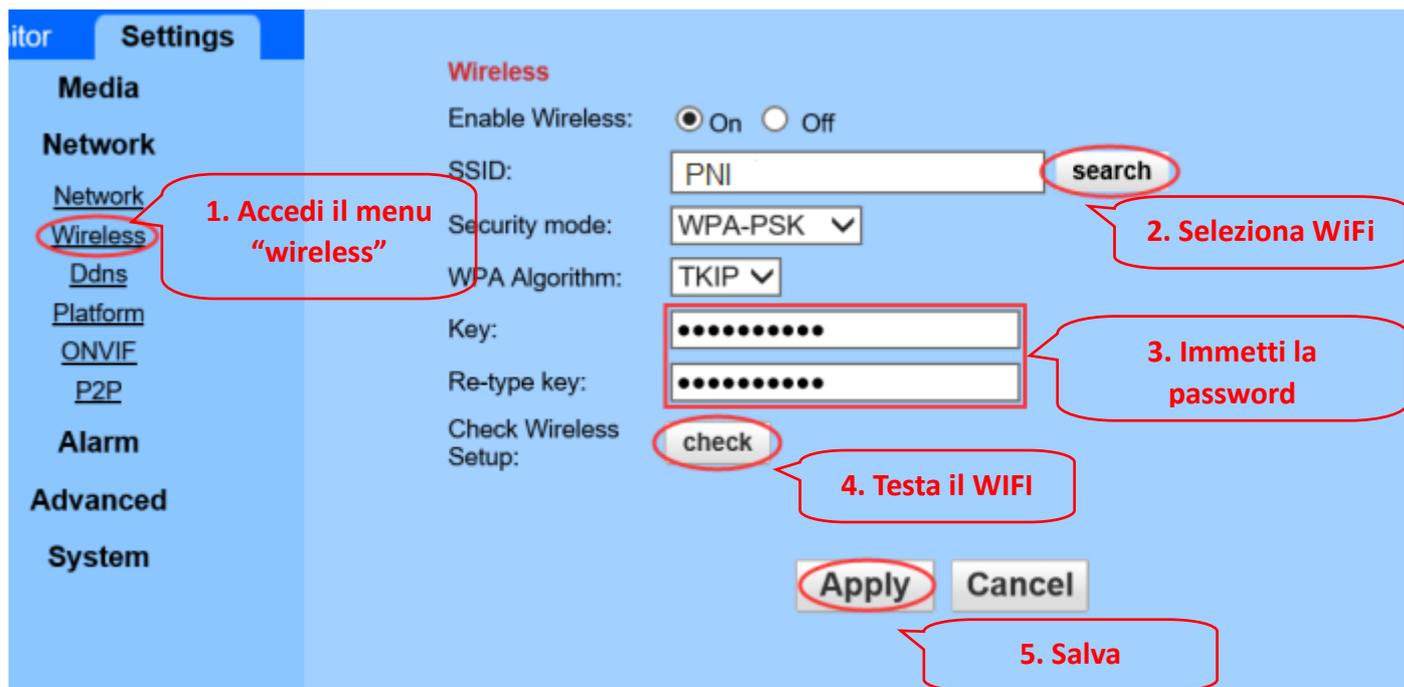

5. Configurazione WiFi

5.1 Configura il WiFi tramite lo smartphone

5.2 Configura il WiFi tramite il PC

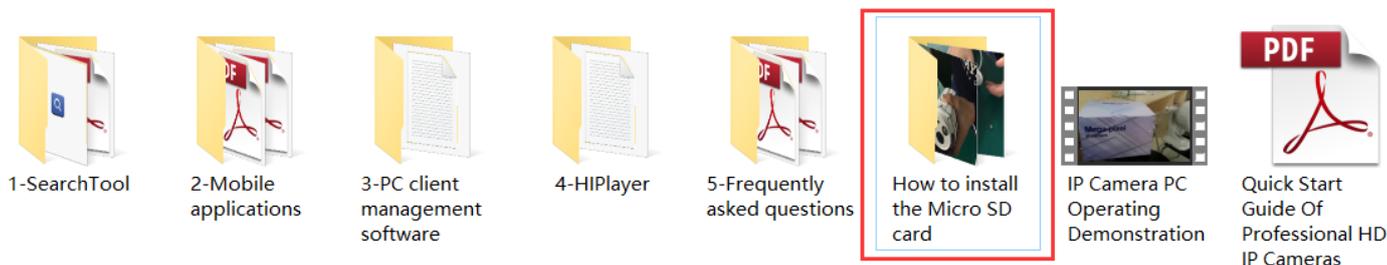

Il router WIFI deve avere un segnale superiore al 50% e il nome della rete WIFI deve essere semplice e non deve contenere caratteri speciali.

Una volta completata l'impostazione WIFI, la telecamera passerà automaticamente alla connessione WIFI quando il cavo di rete viene scollegato.

6. Configurazione registrazione sulla scheda MicroSD

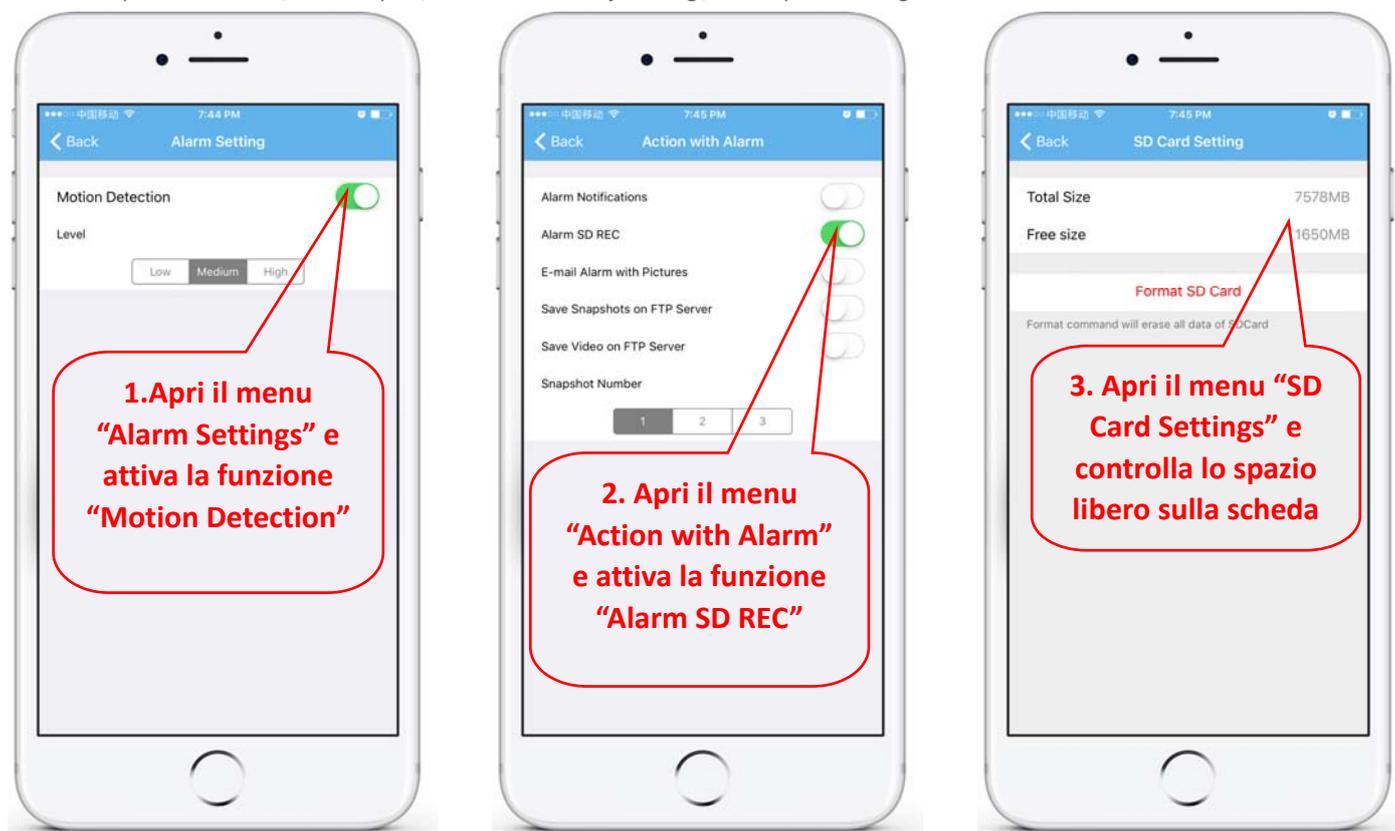

6.4 Per questa procedura è necessario acquistare una scheda MicroSD fino a 128 GB e inserirla nella telecamera. Trova sul CD nella confezione la procedura per l'installazione della scheda Micro SD nella telecamera:

6.4 Configurazione registrazione al rilevamento del movimento tramite lo smartphone

Si consiglia la registrazione con rilevazione di movimento quando la scheda MicroSD è di dimensioni inferiori.

In questo caso, la telecamera registra video sulla scheda MicroSD solo quando viene rilevato un movimento nel suo campo visivo.

6.5 Configurazione registrazione programmata tramite lo smartphone

6.6 Visualizzazione registrazioni salvate sulla scheda MicroSD

Questi parametri possono essere impostati in modo più dettagliato tramite l'applicazione per PC "client HiP2P" o il browser IE sul PC!

7. Tornare alle impostazioni di fabbrica

7.1 Per ripristinare, scollegare la telecamera dall'alimentazione e ricollegarla:

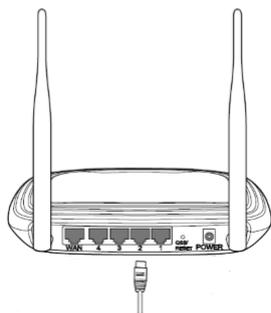

7.2 Per tornare alle impostazioni di fabbrica, tenere premuto il pulsante di ripristino per 15 secondi:

La procedura di ripristino può essere eseguita anche dal browser o dall'applicazione PC

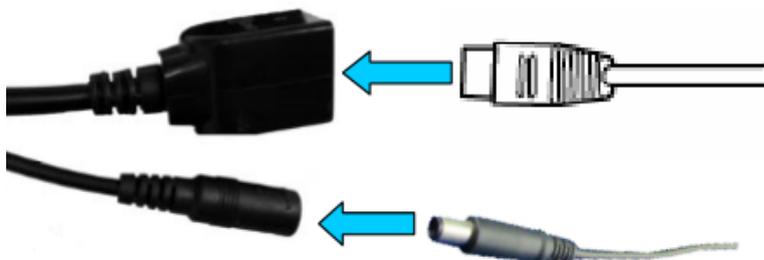

2. Podłącz aparat

2.1 Podłącz kabel sieciowy do routera i podłącz zasilacz aparatu

**Router musi mieć możliwość połączenia z Internetem!
Proszę użyć standardowego zasilacza.**

2.2 Podłącz kabel sieciowy i zasilanie do kamery, potrzeba około kilku minut na samokontrolę, a następnie rozpocząć pracę

Kontrolka sieci (zielona): zawsze migająca oznacza, że transmisja danych w sieci jest normalna

Aparat włączy tryb AP, gdy będzie podłączony tylko do źródła zasilania. Możesz połączyć się z kamerą poprzez tryb AP. Aby uzyskać szczegółowe informacje, zapoznaj się z dokumentacją pomocy „Jak korzystać z trybu AP aparatu” w informacji na płycie CD.

3. Zobacz przez telefon komórkowy

3.1 Pobierz „CamHi” ze sklepu Google Play / Apple App Store lub zeskanuj poniższy kod QR, aby uzyskać informacje o aplikacji

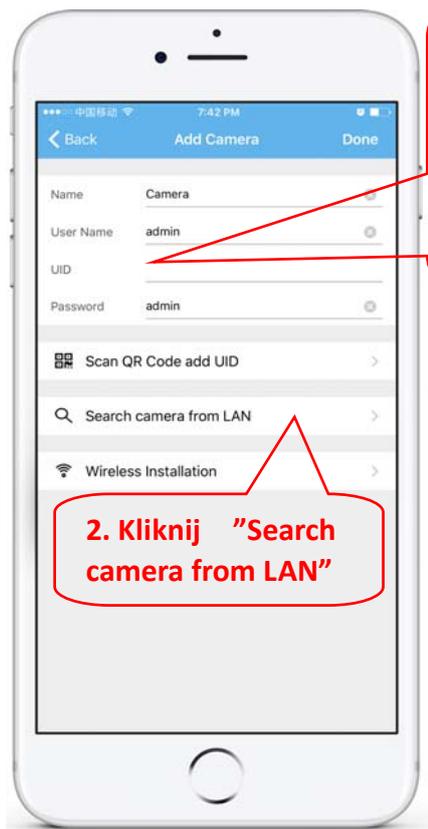

Android

CamHi

IOS

3.2 Uruchom aplikację i dodaj kamerę, wykonując poniższą procedurę. Po tym kroku zmień nazwę aparatu i zakończ procedurę

Możesz też wprowadzić identyfikator UID, skanując kod QR na etykiecie kamery, jak pokazano poniżej (jeśli jest dostępny) lub ręcznie wprowadź identyfikator UID kamery z etykiety kamery (jeśli jest dostępny)

3.3 Po dodaniu kamery kliknij kamerę online, aby wyświetlić obraz w czasie rzeczywistym

Szczegółowe instrukcje dotyczące aplikacji CamHi są dostępne na płycie CD oraz na stronie internetowej produktu

www.pni.ro

4. Zobacz kamerę z komputera

4.1 W celu konfiguracji produktu zainstaluj oprogramowanie „Search tool” z płyty CD. Uruchom oprogramowanie i wyszukaj kamerę w sieci LAN (kamera i komputer muszą być podłączone do tej samej sieci / routera)

search_setup

SearchTool

NO	IP Address	Name	MAC Address	Version	port
0	192.168.1.122	IPCAM	00:E0:F8:04:31:DE	V7.1.0.2.1-20150817	

Please select the device list, and then click Next to modify

Back Next Cancel

Refresh

1. Kliknij "Refresh" aby znaleźć kamerę

2. Kliknij dwukrotnie informacje o kamerze, aby uzyskać dostęp do kamery w przeglądarce Internet Explorer

Kliknij „Next”, aby zmodyfikować parametry sieciowe kamery zgodnie z ustawieniami sieci. Możesz użyć ustawienia DHCP dla szybszej konfiguracji.

Local 192.168.1.18

Admin
Domyślne hasło:
Admin

4.2 Aby uzyskać zdalny dostęp do kamery IP przez Internet, zainstaluj i używaj oprogramowania „HiP2P Client” z płyty CD (na komputer / laptop z systemem Windows). Oprogramowanie umożliwia wstępne wyszukiwanie i konfigurację kamery w sieci lokalnej oraz zaawansowaną konfigurację parametrów kamery.

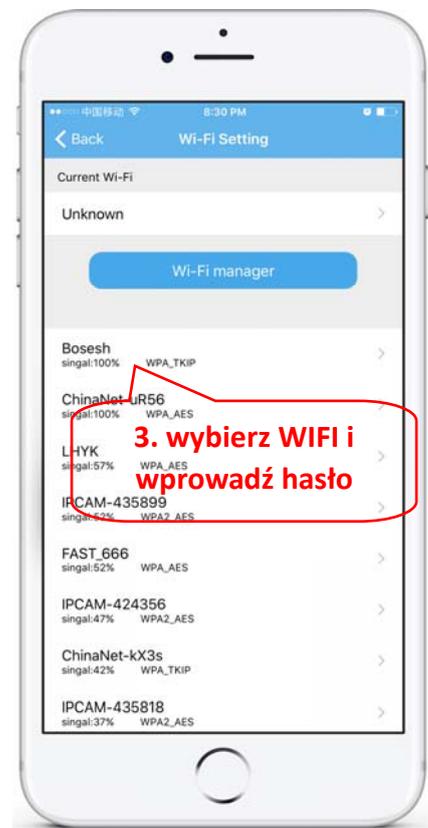

Pakiety instalacyjne i instrukcje oprogramowania klienta HiP2P są dostępne na płycie CD lub na stronie internetowej sprzedawcy www.pni.ro

Uwaga: Dostęp do kamery można również uzyskać z przeglądarki IE, wprowadzając adres IP i port kamery : <http://XXX.XXX.XXX.XXX:80> gdzie xx to adres IP znaleziony w SearchTool.

5. Ustaw WIFI

5.1 Ustaw WIFI na telefonie

5.2 Ustaw WIFI za pomocą przeglądarki na PC

1. Wejść na stronę „bezprowodowa” „wireless”

2. Wybierz WIFI

3. Wprowadź hasło

4. Test WIFI

5. Zapisz ustawienia

Router WIFI musi mieć wartość sygnału większą niż 50%, a nazwa WIFI musi być w języku angielskim i nie może zawierać znaków specjalnych.

Po zakończeniu ustawień WIFI kamera automatycznie przełączy się na połączenie WIFI, gdy kabel sieciowy zostanie odłączony.

6. Ustaw rekord karty Micro SD

6.1 Ustaw zapis karty Micro SD. Znajdź instrukcję obsługi karty Micro SD z płyty CD i zainstaluj kartę Micro SD w kamerze

1-SearchTool

2-Mobile applications

3-PC client management software

4-HIPlayer

How to install the Micro SD card

IP Camera PC Operating Demonstration

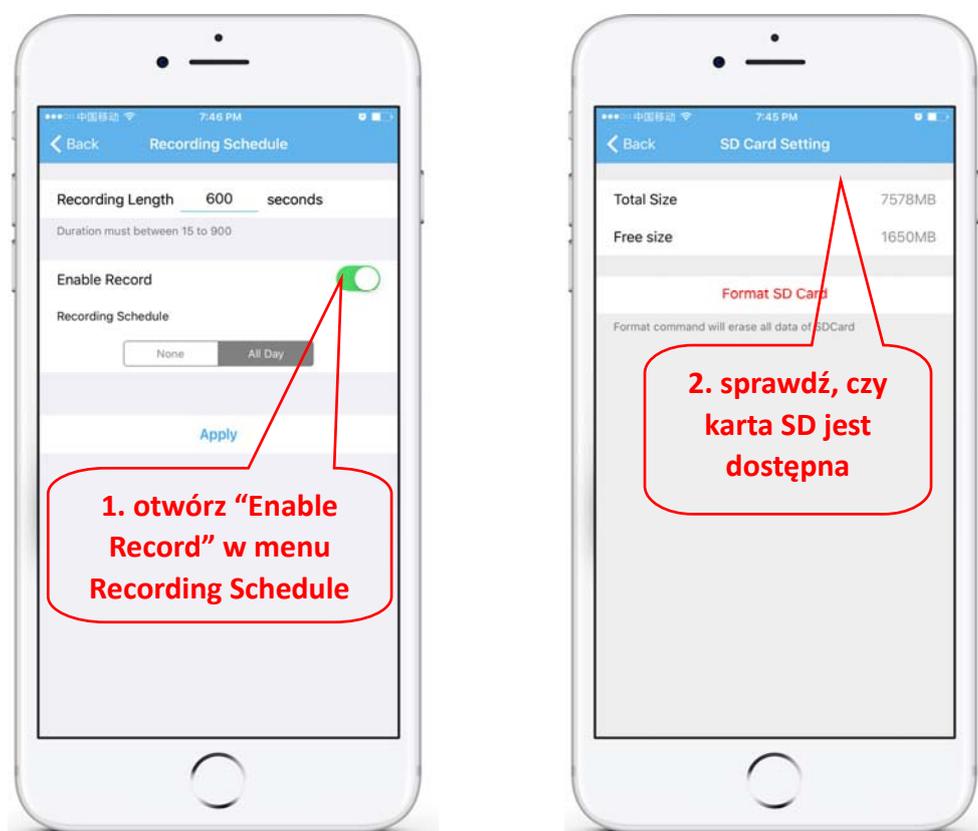

Quick Start Guide Of Professional HD IP Cameras

6.2 Ustaw nagrywanie alarmu wykrywania ruchu z aplikacji telefonu

Nagrywanie z alarmem wykrywania ruchu jest zalecane, gdy karta Micro SD jest mała. W ten sposób kamera będzie nagrywać wideo na karcie SD tylko wtedy, gdy zostanie wykryty ruch w polu widzenia kamery .

6.3 Ustaw harmonogram nagrywania na telefonie

6.4 Odtwarzanie nagrania na telefonie

Parametry te można ustawić bardziej szczegółowo za pomocą oprogramowania klienckiego HiP2P lub przeglądarki IE na PC!

7. Uruchom ponownie i przywróć ustawienia fabryczne

7.2 Ponownie podłącz zasilanie, aby ponownie uruchomić aparat

7.2 Naciśnij i przytrzymaj przycisk resetowania przez 15 sekund, a aparat powróci do ustawień fabrycznych

Możesz także ponownie uruchomić lub zresetować aparat za pomocą telefonu komórkowego lub komputera.

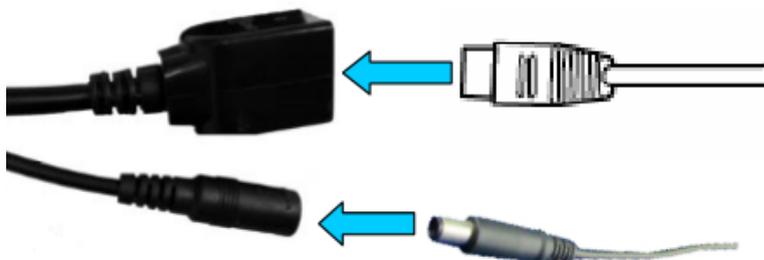

2. Conectare camera

2.1 Conectati cablul de retea la router si alimentatorul la o priza 230V

Routerul trebuie să fie conectat la Internet!
Vă rugăm să utilizați sursa de alimentare standard din colet.

2.2 Conectati cablul de retea si de alimentare la camera; Aceasta are nevoie de aproximativ 2 minute pentru autocalibrare, dupa care intra in modul normal de functionare

Indicator de retea (verde): intermitent inseamna ca transmiterea datelor de retea este normala

Camera va porni in modul AP atunci când camera este conectată numai la sursa de alimentare. Vă puteți conecta direct la camera prin modul AP. Pentru detalii suplimentare, consultați documentația de ajutor „Cum se utilizează modul AP al camerei” de pe CD-ul din colet.

3. Configurare/vizualizare pe telefonul mobil

3.1 Descarcati si instalati aplicatia „CamHi” din Google Play Store / Apple App Store sau scanati codul QR de mai jos pentru a obtine informatii despre aplicatie

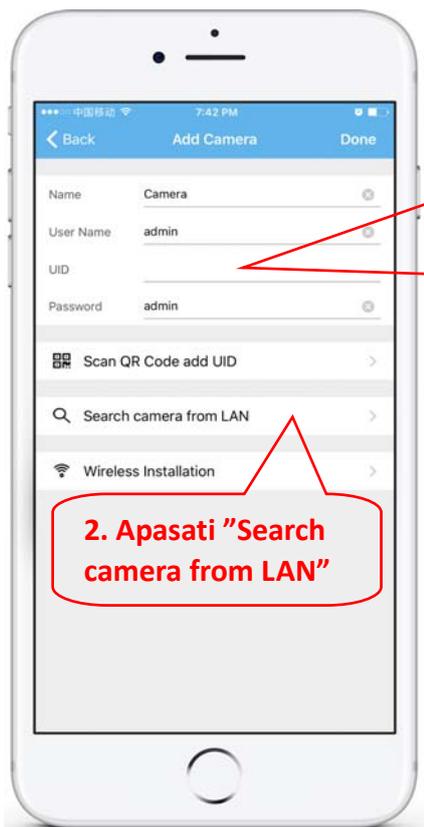

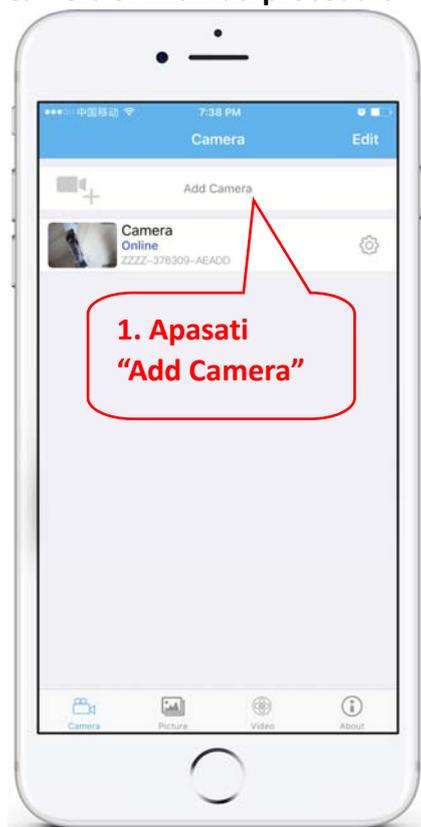

Android

CamHi

IOS

3.2 Rulati aplicatia si adaugati camera urmand procedura de mai jos. Dupa acest pas, redenumiti camera si finalizati procedura

Sau puteți introduce UID-ul camerei scanând codul QR de pe eticheta camerei, așa cum se arată mai jos (dacă este disponibil) sau introduceți manual UID-ul camerei (dacă este disponibil)

Introduceti sau verificati existenta datelor de autentificare din fabrica: User Name : admin / Password: admin

3.3 Dupa adaugarea camerei, apasati pe camera online pentru a vizualiza imaginea in timp real

Instrucțiuni detaliate pentru aplicația CamHi sunt disponibile pe CD și pe pagina web a produsului.

4. Vizualizati camera de pe PC / computer

4.1 Pentru configurarea initiala pe PC instalati aplicatia "Search tool" de pe CD si rulati aplicatia pentru a cauta camera in retea locala (router-ul la care sunt conectate ambele dispozitive)

The screenshot shows the SearchTool application window. At the top, it says "Network" and "Qualcomm Atheros AR9485WB-EG Wireless Netw". Below that is a table with columns: NO, IP Address, Name, MAC Address, Version, and port. The first row is highlighted in blue and contains: 0, 192.168.1.122, IPCAM, 00:E0:F8:04:31:DE, V7.1.0.2.1-20150817, and port. A red callout box points to the "Name" column with the text: "2. faceti dublu clic pe informatiile camerei pentru a accesa camera in browserul Internet Explorer". Another red callout box points to the "Refresh" button with the text: "1. Apasati 'Refresh' pentru a gasi camera". Below the table, it says "Please select the device list, and then click Next to modify". At the bottom are buttons for "Back", "Next", and "Cancel".

Faceti clic pe „Urmatorul” si puteti modifica parametrii de retea ai camerei, in functie de setarile retelei. O varianta rapida este sa bifati casuta "DHCP" si apasati "Next" pentru configurare automata in retea.

The screenshot shows the configuration window for the selected device. It has two sections. The top section is for DHCP settings, with a checked box for "DHCP". Below it are fields for IP (192.168.1.19), SubMask (255.255.255.0), GateWav (192.168.1.1), and Port (80). The bottom section is for manual settings, with fields for IP (192.168.1.122), SubMas (255.255.255.0), GateWa (192.168.1.1), MAC (00:E0:F8:04:31:DE), Name (IPCAM), User (admin), and Passwoi (*****). There is a "Pwd Reset" button. At the bottom, it says "Click Next to confirm the selected device, click Back to reselect the" and has buttons for "Back", "Next", and "Cancel".

4.2 Pentru accesarea camerei de la distanta prin internet instalati si utilizati software-ul "HiP2P Client" de pe CD (pentru PC/Laptop cu Windows). Software-ul permite cautarea si configurarea initiala a camerei in retea locala si configurarea avansata a parametrilor camerei.

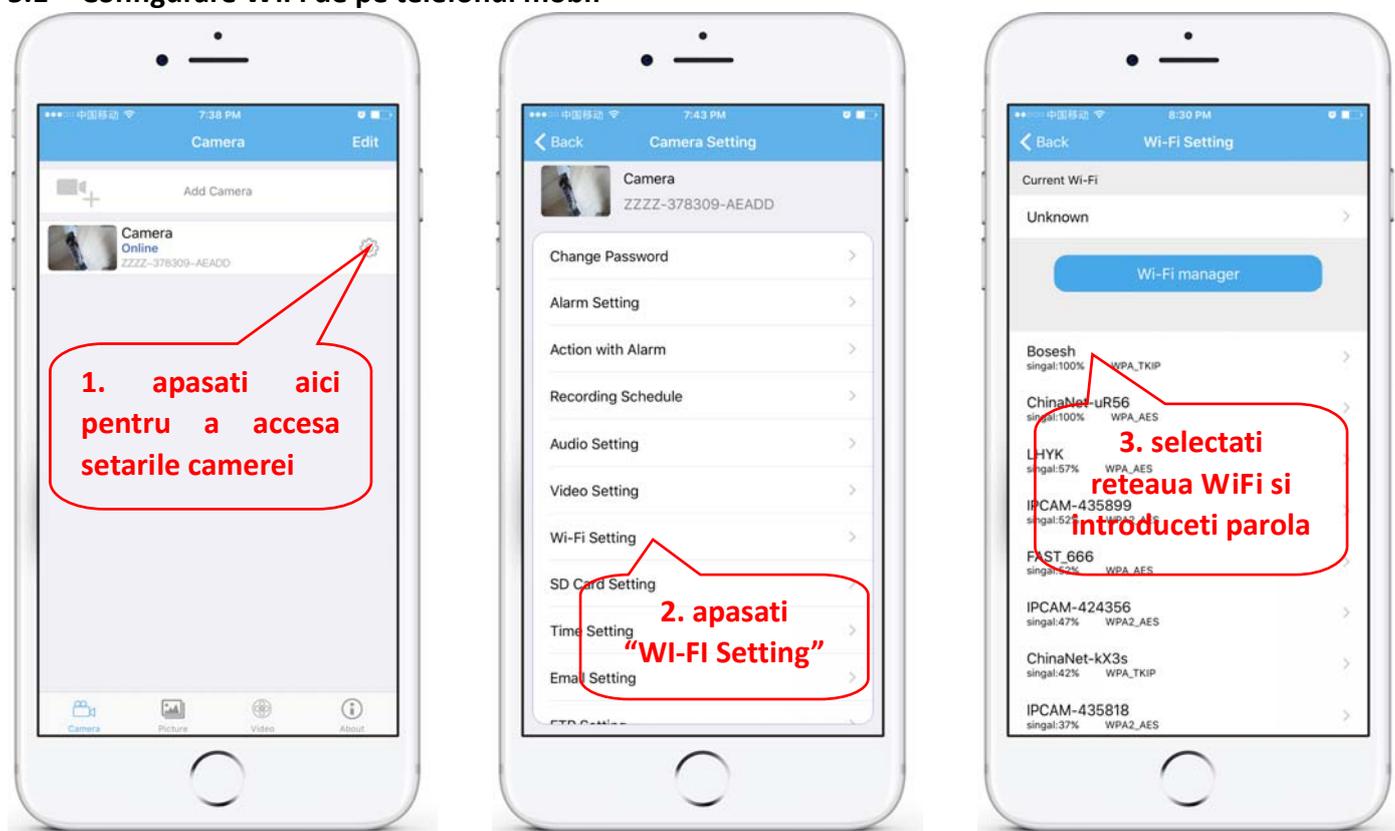

Instructiunile detaliate despre instalarea si utilizarea software-ului "HiP2P Client" sunt disponibile pe CD sau pe pagina web a vanzatorului: www.pni.ro

Obs: Optional in aceeasi retea locala, camera poate fi accesata si din browser introducand IP-ul si portul camerei la adresa: <http://XXX.XXX.XXX.XXX:80> unde xx este adresa IP gasita in SearchTool.

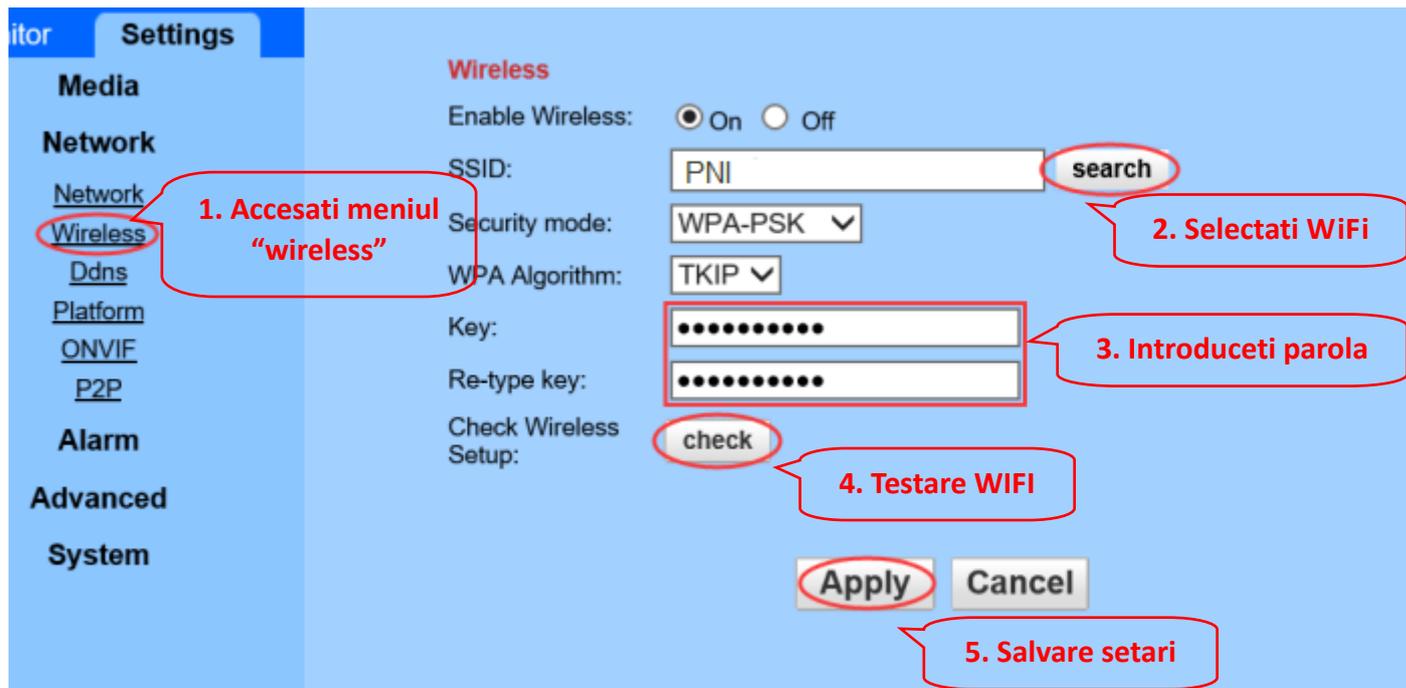

5. Configurare WiFi

5.1 Configurare WiFi de pe telefonul mobil

5.2 Configurare WiFi din browser pe PC

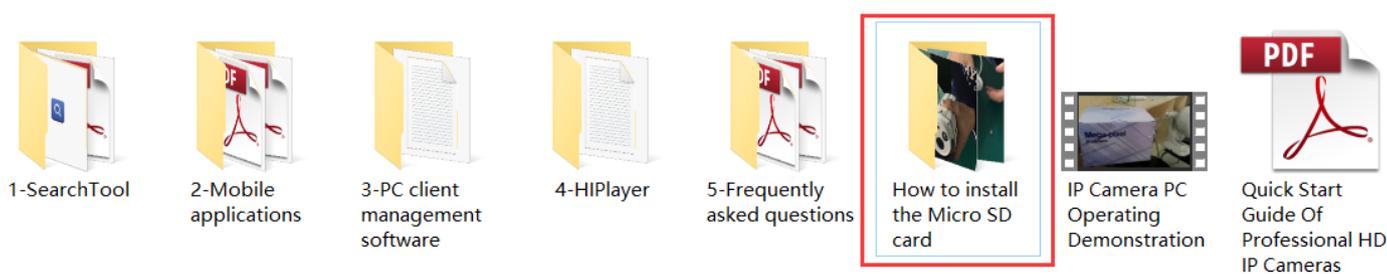

Routerul WIFI trebuie să aibă un semnal mai mare de 50%, iar numele rețelei WIFI trebuie să fie simplu și nu poate conține caractere speciale.

După finalizarea setării WIFI, camera va trece automat la conexiunea WIFI atunci când cablul de rețea este deconectat.

6. Configurare inregistrare pe card MicroSD

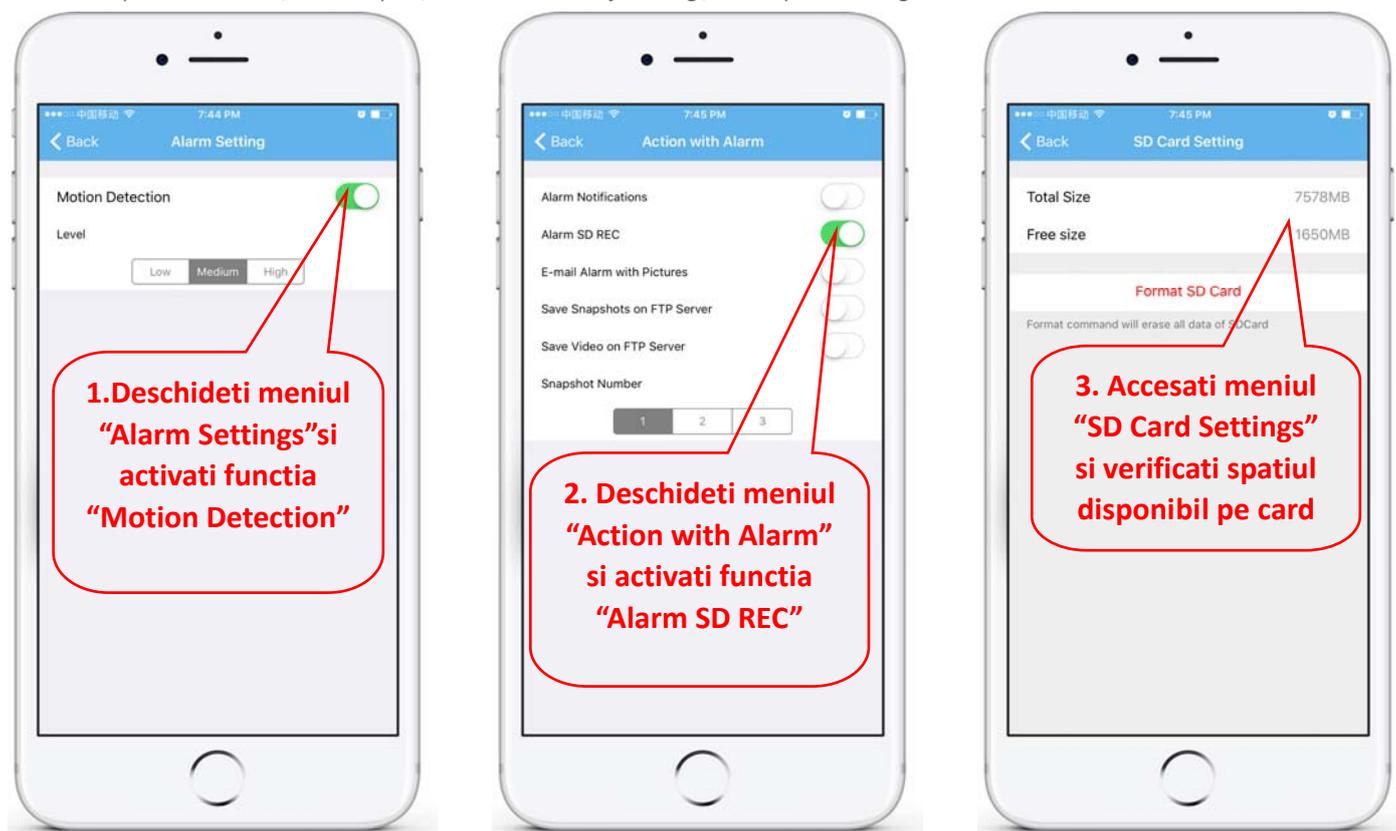

6.7 Pentru aceasta procedura trebuie să achiziționați separat un card MicroSD de maxim 128 GB și să îl introduceți în camera. Regăsiți pe CD-ul din cutie procedura de instalare card Micro SD în camera:

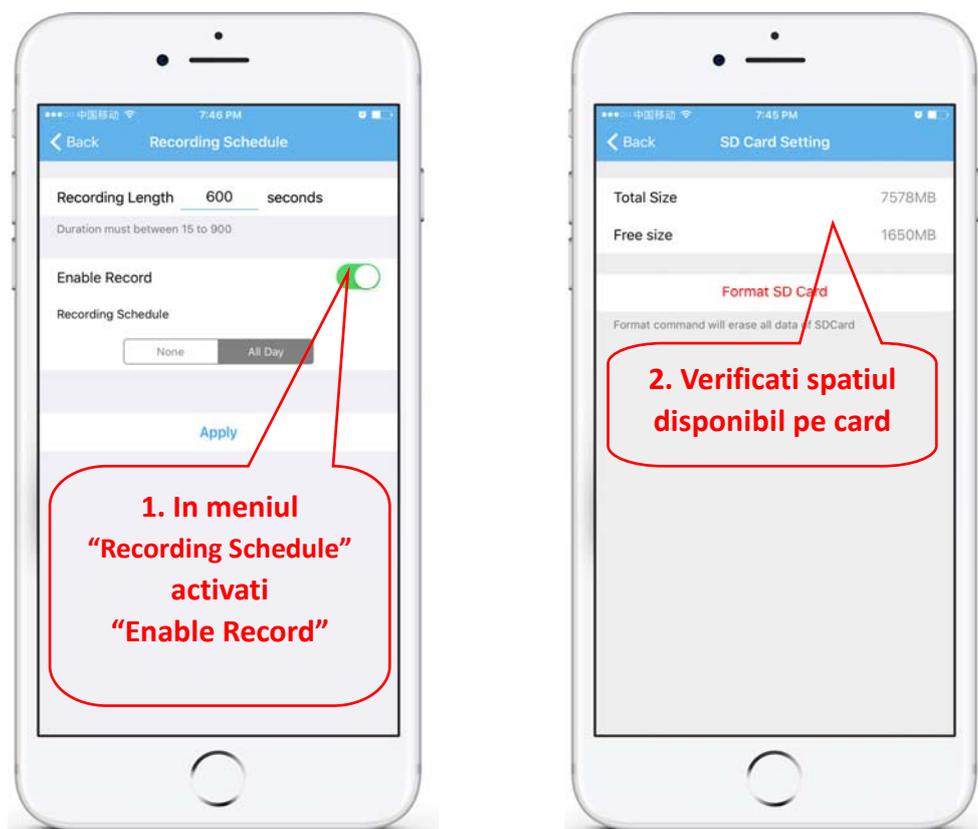

6.8 Configurare inregistrare la detectie miscare din aplicatia de mobil

Inregistrarea la detectie miscare este recomandată atunci când cardul MicroSD are o dimensiune mai redusa.

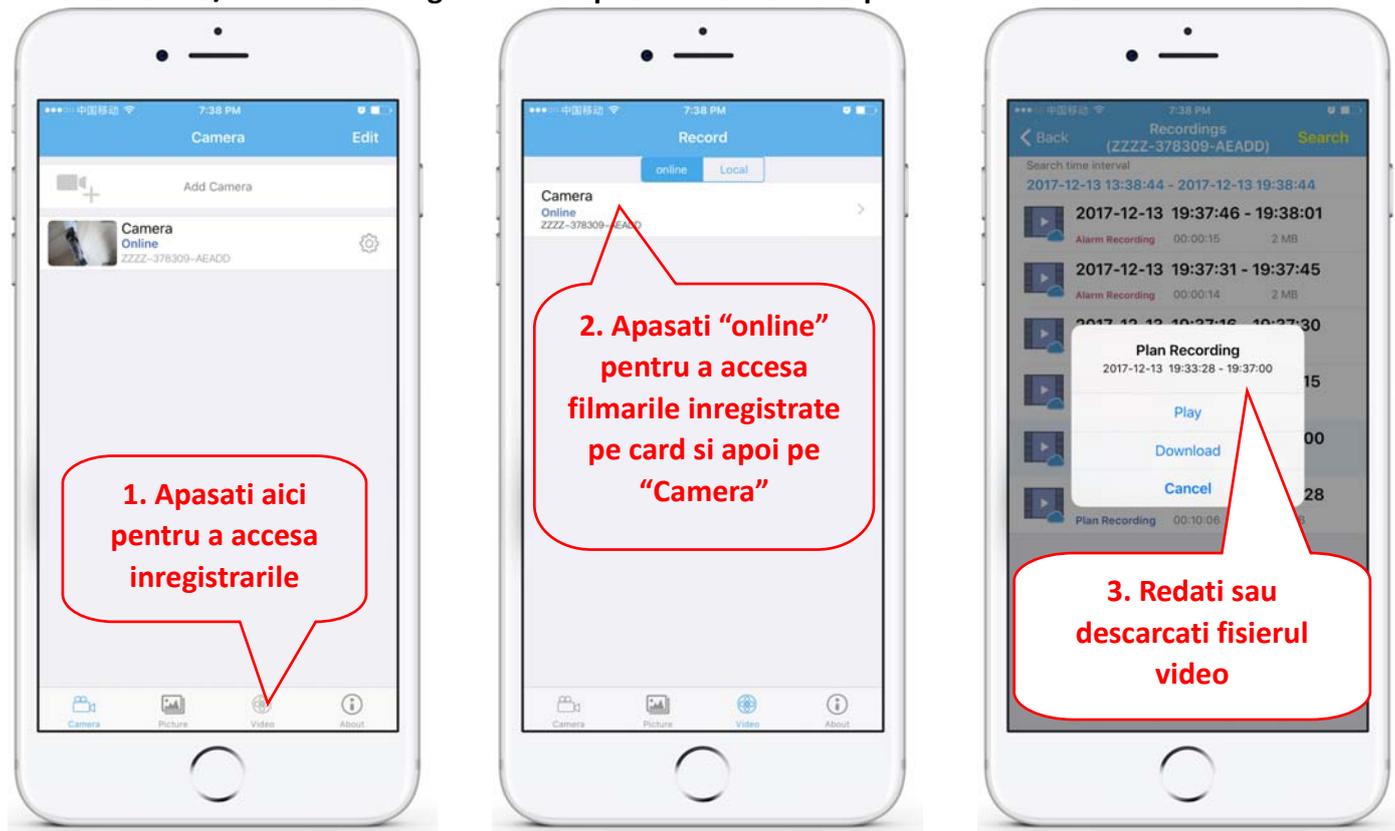

In acest caz camera va inregistra videoclipuri pe cardul MicroSD doar atunci când este detectată o mișcare în câmpul vizual al camerei.

6.9 Configurare inregistrare programata din aplicatia de mobil

6.10 Redare/vizualizare inregistrari din aplicatia de mobil de pe cardul MicroSD

Acești parametri pot fi setați mai detaliat prin intermediul aplicatiei de PC "HiP2P client" sau a browser-ului IE de pe PC!

7. Resetare si revenire la setarile de fabrica

7.1 Pentru resetare deconectati camera de la curent si reconectati:

7.2 Pentru revenirea la setarile din fabrica tineti apasat timp de 15 secunde butonul de reset:

Procedura de resetare poate fi efectuata si din browser sau aplicatia dedicata de PC
