

PNI GreenHouse SC1100B

Invertor solar / Solar inverter

RO Manual de utilizare ... 2

EN User manual 17

Atentionari

1. Acest produs permite conectarea de electrice/electronice/consumatori rezistivi datorita undei de iesire sinus modificat.
 2. **Puteti conecta** la acest invertor cu o unda sinusoidală modificată: incarcatoare de laptop, telefon mobil și aparate foto, aparate cu motorase de putere mica și turatie fixa, prajitoare, cafetiere, cele mai multe aparate stereo, imprimante cu jet, frigidere mici (fara compresor), televizoare, aparate video, multe cuptoare cu microunde.
 3. **Nu conectati** la acest invertor datorita incompatibilitatii și riscului major de defectare: electrice și electronice cu motor, compresor cu turatie variabila cum sunt frigidere, aer conditionat, Electrice și electronice cu sursa de alimentare inductiva(transformator), imprimante cu laser, Scule electrice de mana cu motor, masini de gaurit, flex, unele ceasuri digitale și unele încărcătoare de baterii, variatoare de lumină, unele gadget-uri care funcționează cu baterii reîncărcate într-un adaptor de curent alternativ, încărcătoare și scule de mâna.
1. Inainte de utilizare, cititi toate instructiunile si marcajele de atentionare de pe invertor si baterie.
 2. Pentru a reduce riscul de vatamare, incarcati doar bateriile reincarcabile cu plumb-acid (AGM). Daca folositi baterii cu plumb-acid "umed", acestea trebuie intretinute periodic. Incarcarea altor tipuri de baterii poate provoca pagube și vatamari corporale.
 3. Nu expuneti invertorul la ploaie, zapada sau lichide de orice tip. Invertorul trebuie folosit doar la interior.
 4. Nu dezasamblati invertorul. In caz de defectiune, apelati la un centru service specializat.
 5. Pentru a preveni riscul de soc electric, deconectati toate firele si opriti invertorul inaintea operatiunilor de intretinere sau curatare.
 6. Asigurati o buna ventilatie bateriei. Carcasa bateriei trebuie conceputa astfel incat sa se previna acumularea de gaz hidrogen.
 7. NU incarcati niciodata o baterie inghetata.
 8. Cablurile de intrare/iesire AC trebuie sa fie din sarma de cupru de cel putin 18 AWG si sa suporte cel putin 75°C. Cablurile pentru baterie trebuie sa fie din sarma de cupru de cel putin 6 AWG si sa suporte cel putin 75°C.
 9. Fiti foarte atenti cand umblati cu scule metalice in apropierea invertorului. Scurtcircuitarea bateriei poate provoca o explozie.
 10. Cititi instructiunile de instalare si intretinere inainte de punerea in functiune a invertorului si a bateriei.

Atentionari privind vatamarea personala

1. Spalati abundant cu apa si sapun in cazul in care acidul din baterie intra in contact cu ochii, pielea sau imbracamintea personala.
2. Evitatii sa va atingeti ochii cand lucrati cu bateria.
3. Nu fumati si nu folositi surse de scantei in apropierea bateriei.
4. Indepartati obiecte precum cercei, bratari, lantisoare sau ceasuri atunci cand lucrati cu baterii. Bateriile pot produce un curent de scurtcircuit suficient de ridicat incat sa produca topirea metalului si sa provoace, astfel, arsuri severe.

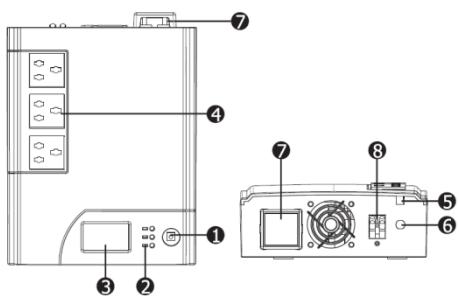

Introducere

PNI GreenHouse SC1100B este un invertor solar intelligent si eficient in termeni de costuri care suporta simultan conectarea la un sistem solar si la reteaua publica de curent (Solar&Utility). Ecranul LCD cu afisaj intuitiv ofera informatii configurabile precum curentul de incarcare a bateriei, prioritate incarcare AC/solar si prioritate sursa de iesire. Cand tensiunea bateriei este scazuta, invertorul va trece automat pe modul "AC grid" pentru a asigura curent suficient consumatorilor.

Caracteristici:

- Invertor cu unda sinusoidala simulata (modificata)
- Controller incarcare solara integrat de 50A
- Curent de incarcare standard de 10A sau 20A de la reteaua publica
- Ecran multifunctional
- Prioritate iesire AC/solar
- Prioritate incarcare AC/solar
- Algoritm de incarcare in 3 pasi
- Protectie la scurtcircuit si supraincarcare
- Protectie la polaritate inversata
- Protectie impotriva descarcarii complete a bateriei
- Repornire automata in timpul recuperarii AC
- Curent de incarcare solara/reteaua publica reglabil

Prezentare produs

1. Intrerupator on/off
2. Indicatori status (pentru detalii, cititi sectiunea *Mod de operare*)
3. Ecran LCD
4. Iesiri
5. Intrare AC
6. Intrerupere circuit intrare
7. Conectori baterie externa
8. Terminal panou solar

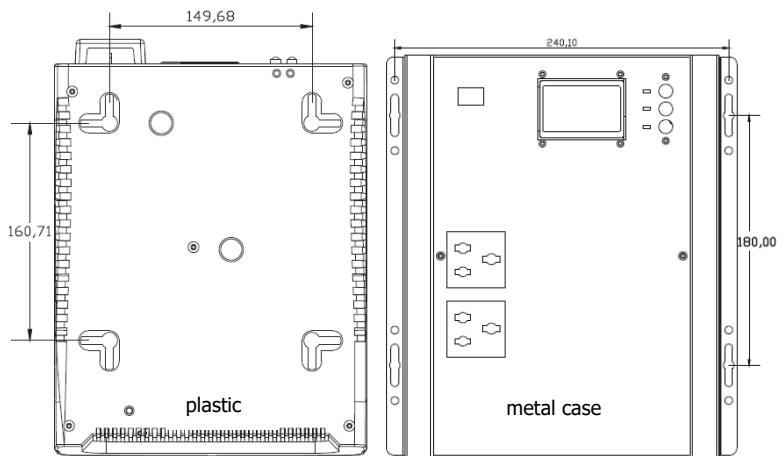

Instalare

NOTA: Inainte de instalare, verificati cu atentie integritatea produsului.

Invertorul poate fi instalat in pozitie verticala, adosat unui perete.

Urmati pasii de mai jos:

1. Opriti invertorul inainte de instalarea acestuia.
2. Alegeti locatia potrivita de instalare. Consultati imaginile alaturate pentru detalii.
3. Marcati locurile pentru dibluri. Fixati diblurile.
4. Montati invertorul pe pozitie.

Conectarea la reteaua publica de curent

Conectati cablul AC la o sursa de curent 230V.

Chiar daca invertorul este inchis, el va incarca oricum bateria externa conectata.

Conecțarea bateriei externe

Pasul 1: Indepartati protectiile de pe terminalii bateriei.

Pasul 2: Respectati marcajele de polaritate de pe baterie

Conectati cablul ROSU la terminalul pozitiv (+);

Conectati cablul NEGRU la terminalul negativ (-).

ATENȚIONARE! Va rugam sa folositi cablu corespunzator pentru conectarea bateriei.

Pasul 3: Strangeti cablurile bateriei cu piulite tip M5. Nu plasati nimic intre partea plata a terminalului bateriei si inelul de pe cablul de conexiune la baterie, datorita temperaturilor mari care s-ar putea dezvolta in aceasta zona.

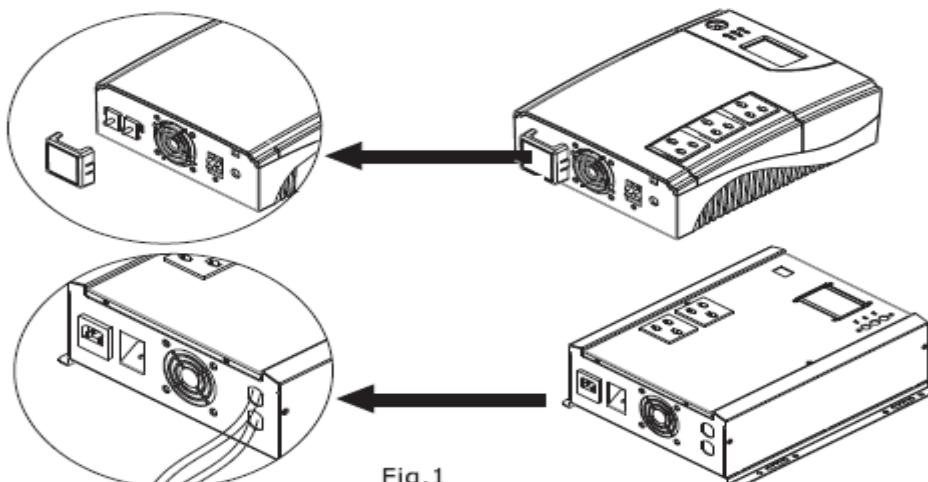

Fig.1

Pasul 4: Instalati un intrerupator DC (DC Breaker) pe linie pozitiva (+). Curentul intrerupatorului DC trebuie sa fie corespunzator cu cel al bateriei conectate la invertor (75A). Tineti intrerupatorul DC inchis. (Fig. 2)

Pasul 5: Conectati bateria externa.

Nota: Pentru siguranta personala, folositi benzi pentru izolarea terminalelor bateriei inainte de punerea in functiune a invertorului.

1) Conecțarea unei singure baterii (Fig.2): Cand folositi o singura baterie, tensiunea sa trebuie sa fie egala cu tensiunea DC nominala a invertorului (Consultati tabelul de mai jos)

Model	Nominal Battery DC Voltage
1200/1800VA	12Vdc
2400VA	24Vdc

2) Conecțarea in serie a mai multor baterii (Fig.3): toate bateriile trebuie sa aiba aceeasi tensiune (V) si amperaj (Ah). Suma valorilor de tensiune a bateriilor trebuie sa fie egala cu tensiunea DC nominala a invertorului.

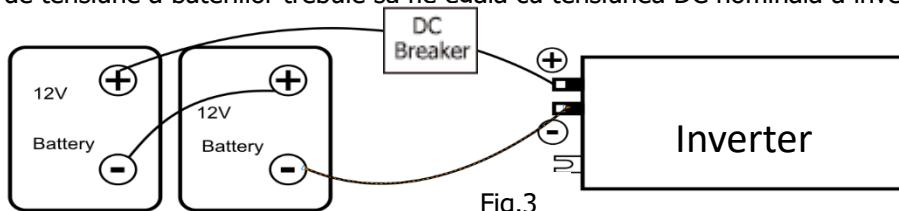

Fig.3

Pasul 6: Asigurati-vă ca ati conectat corect bateria si invertorul.

Polul pozitiv al bateriei (Rosu) la terminalul pozitiv al invertorului (+).

Polul negativ al bateriei (Negru) la terminalul negativ al invertorului (-).

Pasul 7: Puneti inapoi protectiile peste terminalii bateriei.

Pasul 8: Porniti intrerupatorul DC (DC Breaker).

Conecțarea panoului solar

ATENTIONARI: inainte de a conecta modulele PV, instalati mai intai un intrerupator DC intre invertor si modulele PV. Toate conexiunile trebuie executate de personal calificat.

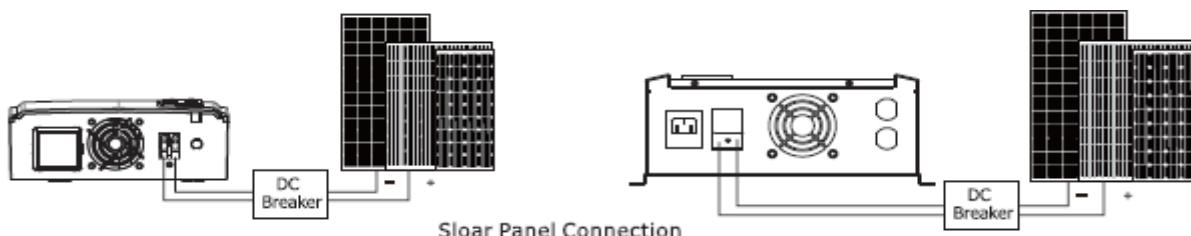

Pentru siguranta sistemului si pentru un mod de operare eficient, folositi cabluri potrivite pentru conectarea modulelor PV.

Pentru a reduce riscul de accidentare, folositi dimensiunile de cablu recomandate mai jos:

Amperaj tipic	Dimensiune	Valoarea cuplului
50A	8AWG	14-16Nm

Pasul 1- Conectati un cablu la polul pozitiv (+) al panoului solar si la terminalul pozitiv (+) al incarcatorului solar

Pasul 2- Conectati celalalt cablu la polul negativ (-) al panoului solar si la terminalul negativ (-) al incarcatorului solar

Alegerea modulelor PV

Inainte de a alege modulele PV, consultati mai intai cerintele de mai jos:

1. Tensiunea de circuit deschis (Voc) a modulelor PV (module fotovoltaice) nu trebuie sa depaseasca tensiunea maxima de circuit deschis cu panoul fotovoltaic a invertorului.

MODEL	2400VA (SC1100)
Curent de incarcare (PWM)	50Amp
Tensiune DC sistem	24Vdc
Interval tensiune de functionare	30~32Vdc
Tensiunea maxima de circuit deschis a panoului fotovoltaic (PV Array)	55Vdc

2. Tensiunea de putere maxima (Vmp) a modulelor PV trebuie sa fie apropiata de cel mai bun Vmp al invertorului sau in intervalul Vmp, pentru a obtine performanta maxima. Daca unul dintre module nu indeplineste aceste cerinte, este necesar sa aveti cateva module PV conectate in serie. Consultati tabelul de mai jos:

Model	Cel mai bun Vmp	Interval Vmp
2400VA (SC1100B)	30Vdc	30~32Vdc

Note:

Vmp: tensiunea maxima a panoului

Eficiența de incarcare a panoului fotovoltaic (PV) este maximizată dacă tensiunea sistemului fotovoltaic este aproape de cel mai bun Vmp.

Numarul maxim de module PV legate in serie: Vmp al modulelor PV * X buc. \leq cel mai bun Vmp al invertorului sau intervalul Vmp

Numarul maxim de module PV legate in paralel: curentul maxim de incarcare al invertorului/Imp

Numarul total de module PV=numarul de module PV in serie*numarul de module PV in paralel.

Luati un invertor de 2400VA (SC1100B) ca exemplu pentru a alege modulele PV potrivite.

Considerand ca Voc a modulului PV nu depaseste 55Vdc si Vmp maxim al modulelor PV este apropiat de 30Vdc sau in intervalul 30Vdc ~ 32Vdc, putem alege module PV cu urmatoarele specificatii:

Putere maxima (Pmax)	Maximum Power (Pmax)	260W	Numarul maxim de module PV in serie 1→30.9 x 1 =30 ~ 32
Tensiune putere maxima Vmp(V)	Max. Power Voltage Vmp(V)	30.9V	
Curent putere maxima Imp(A)	Max. Power Current Imp(A)	8.42A	Numarul maxim de module PV in paralel 6→50A/8.42
Tensiune circuit deschis Voc(V)	Open Circuit Voltage Voc(V)	37.7V	
Curent scurtcircuit Isc(A)	Short Circuit Current Isc(A)	8.89A	Numarul total de module 1x6 = 6

Numarul maxim de module PV in serie: 1

Numarul maxim de module PV in paralel: 6

Numarul total de module PV: 1 x 6=6

Mod de operare

Pornirea/Oprirea (On/Off)

Odata ce invertorul a fost instalat corect, apasati butonul on/off pentru a-l porni. Invertorul va lucra automat in "line mode" (mod linie) sau "inverter mode" (mod invertor) in functie de puterea de intrare din reteaua publica. Apasati din nou butonul on/off pentru a opri invertorul.

Indicatori LED & Alarme audio

Sunt 3 indicatori (verde/rosu) pe panoul frontal al invertorului.

Indicatori LED	Semnificatie	
 Verde (Line)	Constant aprins	Tensiune normala intrare linie (line input)
	Clipseste	Eroare tensiune intrare linie (line input)
 Verde (PV)	Constant aprins	Tensiune normala intrare PV (PV input)
	Clipseste	Eroare tensiune intrare PV (PV input)
 Rosu (Eroare)	Constant aprins	Eroare
	Clipseste	Atentionare
Alarme audio (buzzer)	Mesaje	
Mod invertor (tensiune scazuta baterie)	Sunet o data pe secunda	
110% atentionare suprasarcina	Sunet la fiecare 0.5 secunde	
Supraincarcare	Sunet continuu	
Eroare	Sunet continuu	

Ecran LCD

Ecran	Functie
Informatii sursa intrare	
PV	Indica intrarea PV
INPUT PV BATT TEMP  KW VA °C% Hz	Indica tensiunea de intrare, frecventa de intrare, tensiunea PV, tensiunea bateriei, curentul de incarcare si versiunea.
Program de setari si informatii despre defectiuni	

	Indica programul de setari.	
	Indica avertizari si coduri de eroare. Avertizare si Eroare: clipeste insotit de pictograma	
Informatii iesire		
	Indica tensiunea de iesire, frecventa de iesire, procentul de incarcare, puterea PV, nivelul de incarcare exprimat in Watt, versiune.	
Informatii baterie		
	Indica nivelul bateriei 0-25%, 26-50%, 51-75% si 76-100% in mod baterie (battery mode) si starea incarcarii in modul linie (line mode) sau in standby.	
In modul AC sau in standby, va indica stadiul de incarcare a bateriei		
Status	Tensiune baterie	
Mod curent constant/	<11Vdc/pcs	Cele 4 bare vor clipi pe rand.
Mod tensiune constanta	11Vdc ~ 11.5Vdc/pcs	Bara de jos va fi aprinsa si celelalte 3 bare vor clipi pe rand.
	11.5Vdc ~ 12.5Vdc/pcs	Primele 2 bare de jos vor fi aprinse, iar celelalte 2 bare vor clipi pe rand.
	>12.5Vdc/pcs	Primele 3 bare de jos vor fi aprinse, iar bara de sus va clipi.
Mod "float"	Bateriile sunt complet incarcate.	Cele 4 bare vor fi aprinse.
In modul baterie, va indica capacitatea bateriei.		
Tensiune baterie	Ecran LCD	
<11Vdc/pcs		
11Vdc~11.5Vdc/pcs		
11.5Vdc ~ 12.5Vdc/pcs		
>12.5Vdc/pcs		
Informatii incarcare		
	Indica nivelul de incarcare 0-25%, 26-50%, 51-75% si 76-100%	
	0%~25% 26%~50% 51%~75% 76%~100%	
Informatii mod operare		
	Invertorul este conectat la retea.	
	Invertorul este conectat la panouri PV.	

BYPASS	Incarcarea este furnizata de alimentarea electrica de la reteaua publica (utility power).
	Circuitul de incarcare de la reteaua publica (utility charger circuit) functioneaza.
	Circuitul DC/AC al invertorului functioneaza.
Operare fara sunet	
	Alarme audio si sunet taste sunt dezactivate.

Setari LCD

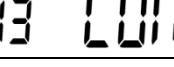

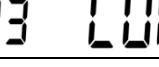

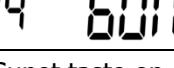

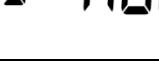

Apasand timp de 3 secunde butonul ENTER, invertorul va intra in modul de setari. Folositi tastele UP (sus) si DOWN (jos) si ENTER pentru a selecta programul. Apasati Esc pentru a iesi.

Programe setari:

Program	Descriere	Optiune selectabila	
01	Prioritate sursa iesire: Pentru a configura prioritatea sursei de incarcare	Prioritate Solar 	Energia solara ofera putere consumatorilor ca prima prioritate. Daca energia solara nu este suficienta pentru a alimenta consumatorii, energia din baterie va furniza putere consumatorilor in acelasi timp. Reteaua publica ofera energie consumatorilor doar cand nici una dintre conditiile de mai sus nu se indeplineste: - Energia solara nu este disponibila. - Tensiunea bateriei scade sub nivelul de cut-off (intrerupere) sau sub nivelul setat la programul 8.
		Prioritate reteaua publica de electricitate (Utility) (default) 	Reteaua publica (Utility) va furniza energie consumatorilor ca prima prioritate. Energia solara va furniza energie consumatorilor doar daca energia de la reteaua publica nu este disponibila.
		Prioritate SBU 	Energia solara va furniza energie consumatorilor ca prima prioritate. Daca energia solara nu este suficienta pentru a alimenta toti consumatorii, bateria va furniza restul de energie. Reteaua publica ofera energie consumatorilor doar cand tensiunea bateriei scade sub nivelul de cut-off (intrerupere) sau sub nivelul setat la programul 8.
		10A	20A

02	Curentul maxim de incarcare: Pentru a configura curentul total de incarcare. (Curentul maxim de incarcare=curentul de incarcare din reteaua publica + curentul de incarcare solara)	02 10A	02 20A
		30A (default) 02 30A	40A 02 40A
		50A 02 50A	60A 02 60A
		70A 02 70A	
03	Interval tensiune de intrare AC	Larg (default) 03 uDE	Interval de tensiune acceptat 90-280VAC
		Ingust 03 Ahu	Interval de tensiune acceptat 170-280VAC.
04	Frecventa iesire	50Hz (default) 04 50	60Hz. 04 60
05	Curentul maxim de incarcare din reteaua publica. Nota: Daca valoarea setata la programul 02 este mai mica decat valoarea setata la programul 05, invertorul va aplica curentul de incarcare setat la programul 02, pentru incarcarea de la reteaua publica.	10A 05 10A	20A (default) 05 20A
06	Prioritate sursa de incarcare	Daca invertorul/incarcatorul functioneaza in linie, in standby sau pe mod baterie, sursa de incarcare poate fi programata ca mai jos:	
		06 CUE	Bateria va fi prioritari incarcata de la reteaua publica de electricitate. Energia solara va incarca bateria doar cand nu este disponibila energia de la reteaua publica.
		06 CSO	Energia solara va fi sursa prioritara de incarcare a bateriei. Reteaua publica va incarca bateria doar daca energia solara nu este disponibila.
		06 OSO	Energia solara va fi singura sursa de incarcare, indiferent daca energia de la reteaua publica este disponibila sau nu.
		Reteaua publica+Solar(default)	Curentul maxim de incarcare = curentul de incarcare de la reteaua publica+curentul de incarcare solara

		Daca invertorul/incarcatorul functioneaza pe mod baterie, doar energia solara poate incarca bateria. Energia solara va incarca bateria daca este disponibila si suficienta.										
07	Tensiunea scazuta de intrerupere (cut-off voltage)	<p>Model 1200/1800VA: setare implicita 10.5V</p> <p>Model 2400VA (PNI SC1100B): setare implicita 21.0V</p>	Pentru modelul 1200VA, intervalul este cuprins intre 9.9V-12.0V, pentru 1800VA intervalul este 10.5V-12.0V, iar pentru 2400VA (PNI SC1100B), intervalul este 19.8V-24.0V. Cu fiecare click cresterea este de 0.1V pentru modele 1200/1800VA si cu 0.2V pentru 2400VA (PNI SC1100B). Tensiunea de intrerupere (cut-off voltage) va ramane pe nivelul setat indiferent de procentul de incarcare.									
08	Setare nivel de tensiune de trecere pe reteaua publica cand se selecteaza "prioritate SBU" sau "prioritate solar" in programul 01	Optiuni disponibile pentru modelul 2400VA (PNI SC1100B):										
		<table> <tr> <td>22.0V </td><td>22.4V </td></tr> <tr> <td>23.0V (default) </td><td>23.4V </td></tr> <tr> <td>24.0V </td><td>24.4V </td></tr> <tr> <td>25.0V </td><td>25.4V </td></tr> </table>	22.0V 	22.4V 	23.0V (default) 	23.4V 	24.0V 	24.4V 	25.0V 	25.4V 		
22.0V 	22.4V 											
23.0V (default) 	23.4V 											
24.0V 	24.4V 											
25.0V 	25.4V 											
09	Setare nivel de tensiune de trecere pe mod baterie cand se selecteaza "prioritate SBU" sau "prioritate solar" in programul 01	Available options in 2400VA (PNI SC1100B) model:										
		<table> <tr> <td>24.0V </td><td>24.4V </td></tr> <tr> <td>25.0V </td><td>25.4V </td></tr> <tr> <td>26.0V </td><td>26.4V </td></tr> <tr> <td>27.0V (default) </td><td>27.4V </td></tr> </table>	24.0V 	24.4V 	25.0V 	25.4V 	26.0V 	26.4V 	27.0V (default) 	27.4V 		
24.0V 	24.4V 											
25.0V 	25.4V 											
26.0V 	26.4V 											
27.0V (default) 	27.4V 											
		Optiuni disponibile pentru modelul 2400VA (PNI SC1100B):										

		Baterie complet incarcata 27.6V(default) 	27.8V 
10	Setare tensiune baterie complet incarcata	28.0V 	28.2V 
		28.4V 	28.6V 
		28.8V 	29.0V 
11	Reporire automata in caz de suprasarcina	Reporire dezactivata (default) 	Reporire activata 
12	Intoarcere automata la modul implicit de afisate	Intoarcere automata la ecranul implicit 	Daca este selectat, indiferent de modul in care utilizatorul schimba modul de afisare, acesta se va intoarce la modul implicit (tensiune de intrare/tensiune de iesire) daca nu se mai apasa nici un buton timp de 1 minut.
		Ramane la ultimul ecran (default) 	Daca este selectat, ecranul va ramane pe ultimul mod de afisare setat de utilizator.
13	Control lumina de fundal	Lumina de fundal on 	Lumina de fundal off (default) 
14	Control alarma	Alarma on (default) 	Alarma off 
15	Control sunet taste	Sunet taste on (default) 	Sunet taste off 

Setari Display

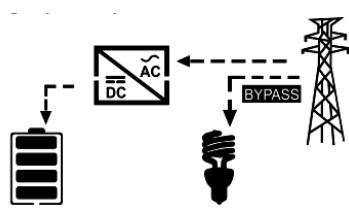

Informatiile de pe ecran pot fi alternate apasand butoanele UP si DOWN. Informatiile sunt afisate in ordinea urmatoare: tensiunea de intare, frecventa de intrare, tensiunea de iesire, frecventa de iesire, tensiunea PV, puterea PV, curentul de incarcare, puterea PV, tensiunea bateriei, tensiunea de iesire, procentul de incarcare, incarcarea in Watt, versiunea CPU.

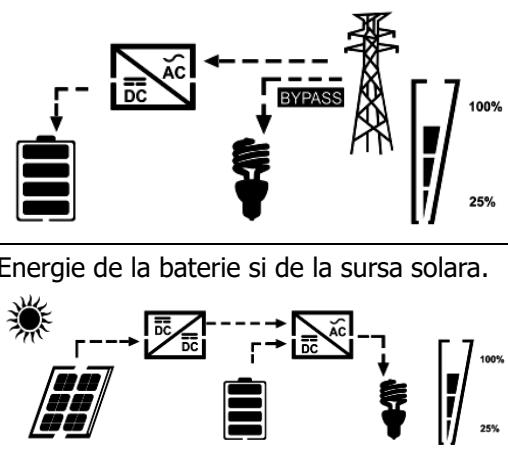

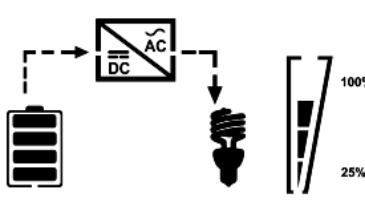

Informatii	Ecran LCD

Probleme si solutii

Problema	LCD/LED/Buzzer	Explicatie / Posibila cauza	Rezolvare
In caz de lipsa de curent, bateria tine putin	Alarma baterie descarcata. Rezolvati imediat.	Tensiunea bateriei este prea mica Bateria nu este complet incarcata nici dupa 8 ore de incarcare.	Incarcati bateria cel putin 8 ore. Verificati valabilitatea bateriei. Daca bateria este prea veche, inlocuiti-o.
Invertorul este alimentat la reteaua publica, dar functioneaza pe mod baterie.	Pe ecran, tensiunea de intrare este 0 si ledul verde clipeste.	Intrerupatorul AC pe intrare este pornit.	Verificati daca interrupatorul AC (AC Breaker) este pornit si daca firele AC sunt conectate corect.
	Ledul verde clipeste.	Insuficienta putere AC (Shore power sau Generator)	1.Verificati daca firele AC sunt prea subtiri sau prea lungi 2.Verificati daca generatorul (daca exista) functioneaza corect sau daca setarile de tensiune pe intrare sunt corecte (UPS).
	Ledul verde este aprins	“Solar first” sau “SBU priority” sunt setate ca surse prioritare.	Schimbati sursa de iesire pe reteaua publica.
	Ecranul nu afiseaza nimic	Bateria nu este conectata bine. Baterie defecta.	Verificati cablurile de conexiune la bateria externa si terminalele. Replace the batteries.
	Cod eroare 00	Scurtcircuti pe iesire.	Verificati conexiunile si indepartati consumatorii inutili.
Alarma sonora continua sau intermitenta, Ledul rosu este aprins sau clipeste.	Cod eroare 01/16	Eroare suprasarcina. Invertorul este in suprasarcina 110%.	Reduceti consumatorii.
	Cod eroare 02/15	Baterie slabă. Tensiunea bateriei este prea mica.	1. Reincarcati bateria. 2. Inlocuiti bateria.
	Cod eroare 03	Tensiunea de iesire este prea	Apelati la un centru service.

		mare.	
Cod eroare 04	Tensiunea de iesire este prea mica.	Apelati la un centru service.	
Cod eroare 05	Temperatura PV este prea ridicata.	1. Verificati panourile PV 2. Apelati la un centru service.	
Cod eroare 06	Tensiunea bateriei este prea mare.	Verificati specificatiile bateriei.	
Cod eroare 07	Eroare ventilator.	Inlocuiti ventilatorul.	
Cod eroare 10	Curent PV prea mare.	Apelati la un centru service.	
Cod eroare 11	Tensiune PV prea mica.	1. Verificati panourile PV.	
Cod eroare 12	Tensiune PV prea mare.	2. Apelati la un centru service.	
Cod eroare 14	Frecventa de iesire anormala.	Apelati la un centru service.	

Specificatii tehnice

MODEL	2400VA (PNI SC1100B)
CAPACITATE	1440W
INTRARE	
Tensiune	230VAC
Interval tensiune	170~280 VAC(Narrow Range) 90~280 VAC(Wide Range)
IESIRE	
Reglare tensiune (Mod baterie)	+10/-18%
Timp transfer	20 ms typical
Forma unda	Unda sinusoidală modificată
BATERIE	
Tensiune baterie	24VDC
Tensiune incarcare "float"	27.4VDC ± 0.2VDC
Curent maxim de incarcare	10A or 20A
INCARCARE SOLARA	
Curent maxim de incarcare	50A
Tensiune sistem	24VDC
Interval tensiune de operare	30~32VDC
Tensiune maxima circuit deschis panou solar	55VDC
Alte detalii	
Dimensiuni	295 x 230 x 85
Greutate	2.8

Declaratie UE de conformitate simplificata

SC ONLINESHOP SRL declara ca **Invertor solar PNI GreenHouse SC1100B** este in conformitate cu Directiva EMC 2014/30/EU, Directiva 2006/42/EC si Directiva LVD 2014/35/EU. Textul integral al declaratiei UE de conformitate este disponibil la urmatoarea adresa de internet:

<https://www.mypni.eu/products/7525/download/certifications>

USER MANUAL

SOLAR INVERTER/CHARGER

PNI GreenHouse SC1100B

General Precautions

1. Before using it, read all instructions and cautionary markings on:
(1) inverter (2) the batteries (3) this manual
2. CAUTION --To reduce risk of injury, charge only lead-acid rechargeable batteries. If customer use flooded batteries, they must maintain them usually. Other types of batteries may cause damage and injury.
3. Do not expose it to rain, snow or liquids of any type. It is designed for indoor.
4. Do not disassemble it. Take it to a qualified service center when service or repair is required.
5. To prevent the risk of electric shock, disconnect all wiring before attempting any maintenance or cleaning. Turning off the unit will not reduce this risk.
6. WARNING: Provide ventilation to outdoors from the battery compartment. The battery enclosure should be designed to prevent accumulation and concentration of hydrogen gas at the top of the compartment.
7. NEVER charge a frozen battery and connect the inverter with 12V to 24V battery.
8. Input/output AC wiring must be no less than 18 AWG gauge copper wire and rated for 75°C or higher. Battery cables must be rated for 75°C or higher and should be no less than 6AWG gauge.
9. Be extra cautious when working with metal tools around batteries. Short-circuiting the batteries could cause an explosion.
10. Read the battery manufacturer's installation and maintenance instructions prior to operating.

Personnel Precautions

1. Have plenty of fresh water and soap nearby in case battery acid contacts skin, clothing or eyes.
2. Avoid touching eyes while working near batteries.
3. NEVER smoke or allow a spark or flame in vicinity of a battery.
4. Remove personal metal items such as rings, bracelets, necklaces, and watches when working with batteries. Batteries can produce a short-circuit current high enough to make metal melt, and could cause severe burns.
5. If a remote or automatic generator start system is used, disable the automatic starting circuit or disconnect the generator to prevent accident during servicing.

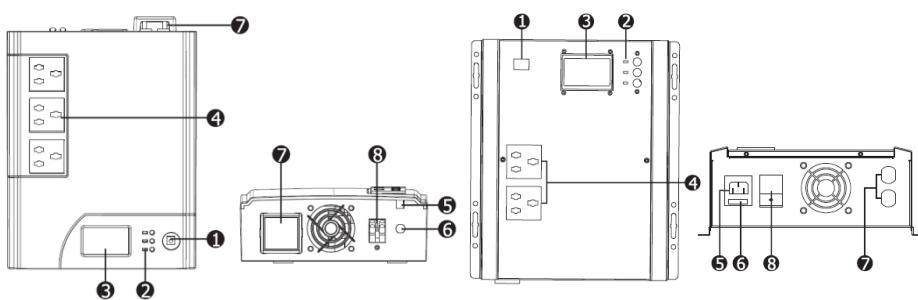

Introduction

It is a cost effective, intelligent solar inverter which accept Solar&Utility input at the same time. The comprehensive LCD display offers user-configurable and easy-accessible button adjustment such as battery charging current, AC/solar charger priority and output source priority. When battery voltage low, it will automatically switch to AC grid to supply continuously power to the loads.

Features:

- Simulated sine wave inverter
- Built-in 50 amp solar charge controller
- 10A or 20A standard charging current from utility
- MFD (multi-function display)
- AC/solar priority for output via MFD
- AC/solar priority for charging via MFD
- Smart user friendly interface
- 3 step charging algorithm
- Overload&short-circuit protection
- Battery reverse polarity protection
- Deep discharge protection
- Auto restart while AC is recovering
- Adjustable solar and utility charging current

Product Overview

1. Power switch
2. Status indicators(please see the Operation section for the details)
3. LCD display
4. Output receptacles
5. AC input
6. Input circuit breaker
7. External battery connectors
8. Solar panel terminal

Installation

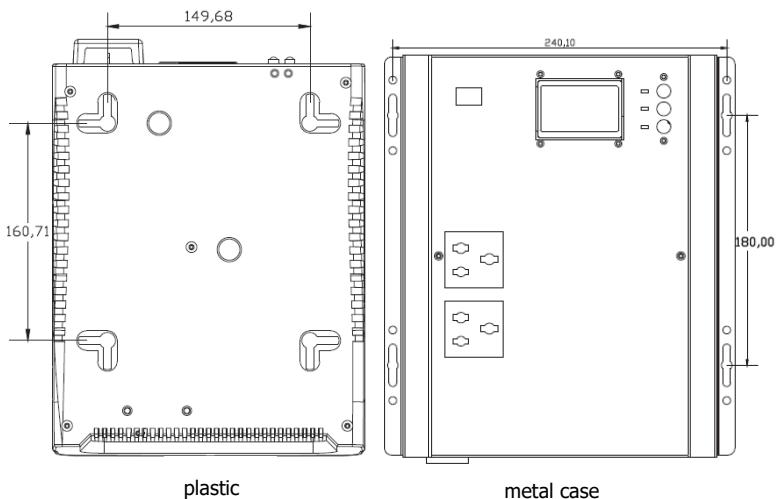

NOTE: Before installation, please inspect the unit. Be sure that nothing inside the package is damaged.

Mounting the unit

The unit only can be mounted vertically to a wall surface.

Please follow below steps:

1. Turn off the unit before mounting.
2. Select an appropriate mounting location. Use a horizontal and the length at one must be 80mm and mark the two ends on the wall.(see right chart)
3. Drill two marks by screws.
4. Mount the unit by positioning the key-hole slots over the mounting screws.

Connect to utility and charge

Plug the AC input cord to the wall outlet. The unit will automatically charge the connected external battery even though the unit is off.

Connect external battery

Step1: Away the cover of external battery terminal.

Step2: Following battery polarity guide printed near the battery terminal.

RED cable to the positive terminal(+);

BLACK cable to the negative terminal(-).

WARNING! Please use the appropriate battery cable.

Step3: Tight the battery cables with the M5 nuts .Do not place anything between the flat part of battery terminal and the battery cable ring terminal or overheating may occur.(See Fig.1)

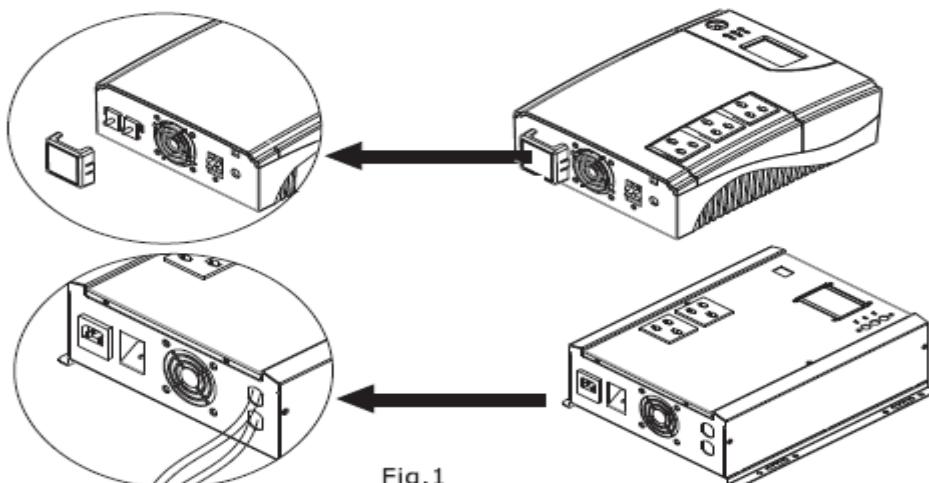

Fig.1

Step4: Install a DC Breaker in a positive line. The rating of the DC Breaker must be according to the inverter's battery current(75Amp).Keep the DC Breaker off.(See Fig.2)

Step5: Connect battery cable to the external batteries.

Note: For the user operation safety, we strongly recommend that you should use tapes to isolate the battery terminals

before you start to operate the unit.

1) Single battery connection(Refer to Fig.2): When using a single battery, its voltage must be equal to the Nominal DC Voltage of the unit.(See below Table 1)

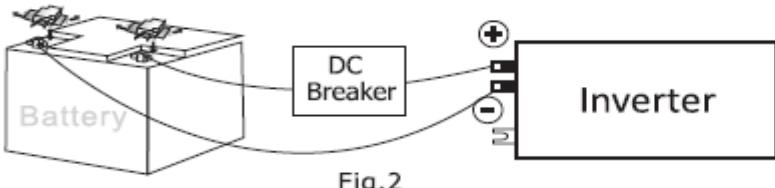

Fig.2

Table 1

Model	Nominal Battery DC Voltage
1200/1800VA	12Vdc
2400VA	24Vdc

2) Multiple batteries in series connection(Refer to Fig.3): All batteries must be equal in voltage and amp hour capacity. The sum of their voltages must be equal to the Nominal DC Voltage of the unit.

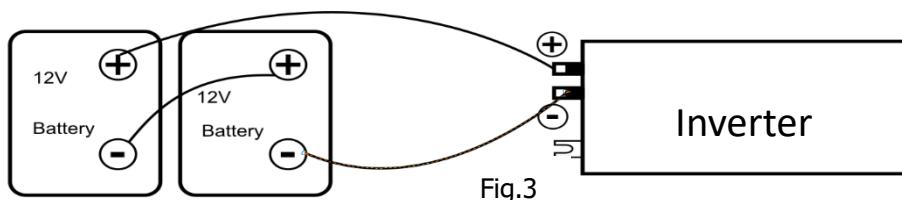

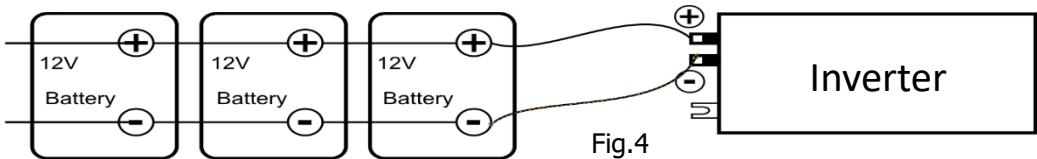

Fig.3

3) Multiple batteries in parallel connection(Refer to Fig.4): Each battery's voltage must be equal to the Nominal DC Voltage of the unit.

Step 6: Make sure to connect the polarity of battery side and unit correctly.

Positive pole(Red) of battery to the positive terminal(+)of the unit.

Negative pole(Black) of battery to the negative terminal(-)of the unit.

Step 7: Put the covers back to the external battery terminals.

Step 8: Take the DC Breaker on.

Connect to Solar Panel

CAUTION: Before connecting to PV modules, please install separately a DC circuit breaker between inverter and PV modules.

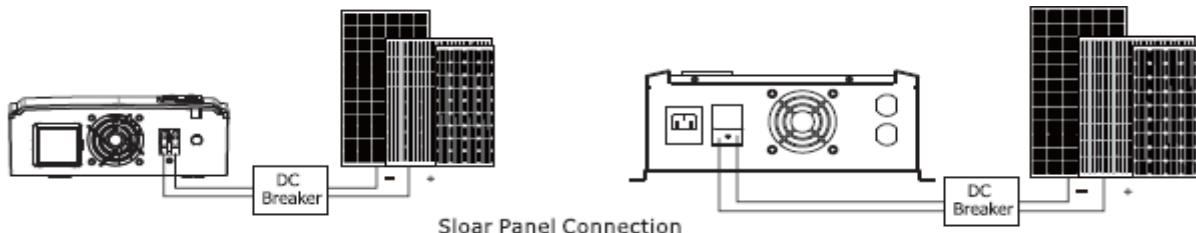

WARNING! All wiring must be performed by a qualified personnel.

WARNING! It's very important for system safety and efficient operation to use appropriate cable for PV module connection. To reduce risk of injury. please use the proper recommended cable size as below.

Typical Amperage	Gauge	Torque Value
50A	8AWG	14-16Nm

Step 1- Connect one cable to the positive(+)pole of solar panel and solar charger positive(+)terminal.

Step 2- Connect the other cable to the negative(-)pole of solar panel and solar charger negative(-)terminal.

PV Module Selection

When selecting proper PV modules, please be sure to consider below requirements first :

1. Open Circuit Voltage (Voc) of PV modules does not exceed max. PV array open circuit voltage of inverter.

INVERTER MODEL	1200VA/1800VA	2400VA
Charging Current (PWM)		50Amp
System DC Voltage	12Vdc	24Vdc
Operating Voltage Range	15~18Vdc	30~32Vdc
Max. PV Array Open Circuit Voltage		55Vdc

2. Max. Power Voltage (Vmp) of PV modules should be close to best Vmp of inverter or within Vmp range to get best performance. If one PV module can not meet this requirement, it's necessary to have several PV modules in series connection. Refer to below table.

Model	Best Vmp	Vmp range
1200VA/1800VA	15Vdc	15~18Vdc
2400VA	30Vdc	30~32Vdc

Note: Vmp: panel max power point voltage.

The PV charging efficiency is maximized while PV system voltage is close to best Vmp.

Maximum PV module numbers in series: Vmp of PV module*X pcs \leq best Vmp of inverter or Vmp range

PV module numbers in parallel: Max. charging current of inverter/Imp

Total PV module numbers=maximum PV module numbers in series*PV module numbers in parallel

Take 1200/1800VA inverter as an example to select proper PV modules. After considering Voc of PV module not exceed 55Vdc and max. Vmp of PV module close to 15Vdc or within 15Vdc ~ 18Vdc, we can choose PV module with below specification.

Maximum Power (Pmax)	85W	Max. PV module numbers in series 1→17.6 x 1 ≈ 15 ~ 18 PV module numbers in parallel 10→50A/4.83 Total PV module numbers 1x10 = 10
Max. Power Voltage Vmp(V)	17.6V	
Max. Power Current Imp(A)	4.83A	
Open Circuit Voltage Voc(V)	21.6V	
Short Circuit Current Isc(A)	5.03A	

Maximum PV module numbers in series: 1

PV module numbers in parallel: 10

Total PV module numbers: 1 x 10=10

Take 2400VA inverter as an example to select proper PV module. After considering Voc of PV module not exceed 55Vdc and max. Vmp of PV module close to 30Vdc or within 30Vdc ~ 32Vdc, we can choose PV module with below specification.

Maximum Power (Pmax)	260W	Max. PV module numbers in series 1→30.9 x 1 ≈ 30 ~ 32 PV module numbers in parallel 6→50A/8.42 Total PV module numbers 1x 6 = 6
Max. Power Voltage Vmp(V)	30.9V	
Max. Power Current Imp(A)	8.42A	
Open Circuit Voltage Voc(V)	37.7V	
Short Circuit Current Isc(A)	8.89A	

Maximum PV module numbers in series: 1

PV module numbers in parallel: 6

Total PV module numbers: 1 x 6 = 6

Operation

Power On/Off

Once the inverter has been properly installed, press the power switch to turn on the unit. The unit will work automatically in line mode or inverter mode according to input utility power's status. When press the power switch again, the unit will be turned off.

LED Indicators & Audible Alarms

There are three indicators (Green/Red) in the front panel of the unit

LED Indicators		Messages
 Green (Line)	Constant on	Line input voltage normal
	Flashing	Line input voltage fault
 Green (PV)	Constant on	PV input voltage normal
	Flashing	PV input voltage fault
 Red (Fault)	Constant on	Fault mode
	Flashing	Warning mode
Buzzer Audible Alarms		Messages
Inverter mode (low-battery voltage)		Buzzing every 1 seconds
110% overload warning		Buzzing every 0.5 seconds
Over charge		Buzzing continuously
Fault mode		Buzzing continuously

LCD Display

Display	Function			
Input Source Information				
PV	Indicates the PV input.			
INPUT PV BATT TEMP 	Indicate input voltage, input frequency, PV voltage, battery voltage, charger current and version model.			
Configuration Program and Fault Information				
	Indicates the setting programs.			
	Indicates the warning and fault codes. Warning and Fault: flashing with   .			
Output Information				
OUTPUT GRID INV LOAD 	Indicates output voltage, output frequency, load percent, PV power, load in Watt, version number.			
Battery Information				
	Indicates battery level by 0-25%, 26-50%, 51-75% and 76-100% in battery mode and charging status in line mode or standby mode.			
In AC mode or standby mode, it will present battery charging status.				
Status	Battery Voltage	LCD Display		
Constant	<11Vdc/pcs	4 bars will flash in turns.		
Current mode/ Constant Voltage mode	11Vdc ~ 11.5Vdc/pcs	Bottom bar will be on and the other three bars will flash in turns.		
	11.5Vdc ~ 12.5Vdc/pcs	Bottom two bars will be on and the other two bars will flash in turns.		
	>12.5Vdc/pcs	Bottom three bars will be on and the top bar will flash.		
Floating mode	Batteries are fully charged	4 bars will be on.		
In battery mode, it will present battery capacity.				
Battery Voltage		LCD Display		
<11Vdc/pcs				
11Vdc~11.5Vdc/pcs				
11.5Vdc ~ 12.5Vdc/pcs				
>12.5Vdc/pcs				
Load Information				
	Indicates the load level by 0-25%, 26-50%, 51-75% and 76-100%			
	0%~25%	26%~50%	51%~75%	76%~100%

Mode Operation Information

	Indicates unit connects to the mains.
	Indicates unit connects to the PV panel.
BYPASS	Indicates load is supplied by utility power.
	Indicates the utility charger circuit is working.
	Indicates the DC/AC inverter circuit is working.

Mute Operation

	Indicates unit alarm or button beep is disabled.
--	--

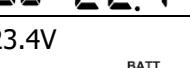

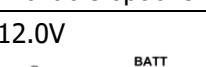

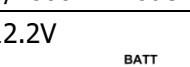

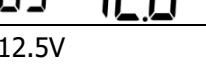

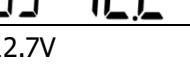

LCD Setting

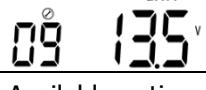

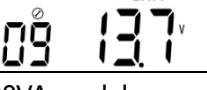

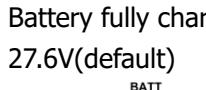

After pressing and holding "ENTER" button for 3 seconds, the unit will enter setting mode. Press "UP or DOWN" or "ENTER"button to select setting programs. And then, press "ESC" button to exit.

Setting Programs:

Program	Description	Selectable option	
01	Output source priority: To configure load power source priority	Solar first 	Solar energy provides power to the loads as first priority. If solar energy is not sufficient to power all connected loads, battery energy will supply power to the loads at the same time. Utility provides power to the loads only when any one condition happens: - Solar energy is not available. - Battery voltage drops to low-level cut-off voltage or the setting point in program 08.
		Utility first (default) 	Utility will provide power to the loads as first priority. Solar and battery energy will provide power to the loads only when utility power is not available.
		SBU priority 	Solar energy provides power to the loads as first priority. If solar energy is not sufficient to power all connected loads, battery energy will supply power to the loads at the same time. Utility provides power to the loads only when

			battery voltage drops to either low-level cut-off voltage or the setting point in program 08.
02	Maximum charging current: To configure total charging current for solar and utility chargers (Max. charging current= utility charging current+solar charging current)	10A 	20A 
		30A (default) 	40A 
		50A 	60A 
		70A 	
03	AC input voltage range	Wide (default) 	If selected, acceptable AC input voltage range will be within 90-280VAC.
		Narrow 	If selected, acceptable AC input voltage range will be within 170-280VAC.
04	Output frequency	50Hz (default) 	60Hz. 
05	Maximum utility charging current Note: If setting value in program 02 is smaller than that in program 05, the inverter will apply charging current from program 02 for utility charger.	10A 	20A (default) 
06	Charger source priority To configure charger source priority	If this inverter/charger is working in Line, Standby or Battery mode, charger source can be programmed as below:	
			Utility will charge battery as first priority. Solar energy will charge battery only when utility power is not available.
			Solar first Solar energy will charge battery as first priority. Utility will charge battery only when solar energy is not available.
			Only Solar Solar energy will be the only charger source no matter utility is available or not.
			Utility+Solar(default) Max. charging current = utility charging current+solar charging current
			If this inverter/charger is working in Battery mode, only solar energy can charge battery. Solar energy

		will charge battery if it's available and sufficient.
07	Low DC cut-off voltage	1200/1800VA model: default setting 10.5V 
		2400VA model: default setting 21.0V 
		Setting range is from 9.9V to 12.0V for 1200VA model, 10.5V to 12.0V for 1800VA model, 19.8V to 24.0V for 2400VA model. Increment of each click is 0. 1V for 1200/1800VA model, 0. 2V for 2400VA model. Low DC cut-off voltage will be fixed to setting value no matter what percentage of load is connected.
08	Setting voltage point back to utility source when selecting "SBU priority" or "Solar first" in program 01	Available options in 1200/1800VA model: 11.V 11.2V  
		11.5V (default) 11.7V  
		12.0V 12.2V  
		12.5V 12.7V  
		Available options in 2400VA model: 22.0V 22.4V  
		23.0V (default) 23.4V  
		24.0V 24.4V  
		25.0V 25.4V  
		Available options in 1200/1800VA model: 12.0V 12.2V  
		12.5V 12.7V  

				
		13.5V (default)	13.7V	
				
Available options in 2400VA model:				
09	Setting voltage point back to battery mode when selecting "SBU priority" or "Solar first" in program 01	24.0V 	24.4V 	
		25.0V 	25.4V 	
		26.0V 	26.4V 	
		27.0V (default) 	27.4V 	
		Available options in 1200/1800VA model:		
10	Setting battery fully charged voltage	Battery fully charged 13.8V(default) 	13.9V 	
		14.0V 	14.1V 	
		14.2V 	14.3V 	
		14.4V 	14.5V 	
		Available options in 2400VA model:		
		Battery fully charged 27.6V(default) 	27.8V 	
		28.0V 	28.2V 	
		28.4V 	28.6V 	
		28.8V 	29.0V 	
		Restart disable	Restart enable	

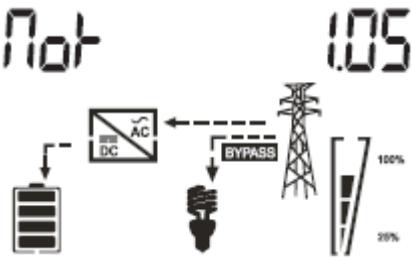

11	Auto restart when overload occurs	(default) 11 Ld	11 Ld
12	Auto return to default display screen	Return to default display screen 12 ESP	If selected, no matter how users switch display screen, it will automatically return to default display screen (Input voltage /output voltage) after no button is pressed for 1minute.
		Stay at latest screen (default) 12 FEP	If selected, the display screen will stay at latest screen user finally switches.
13	Backlight control	Backlight on 13 LOI	Backlight off (default) 13 LOF
14	Alarm control	Alarm on (default) 14 bOI	Alarm off 14 bOF
15	Button beep control	Button beep on (default) 15 RON	Button beep off 15 ROF

Display Setting

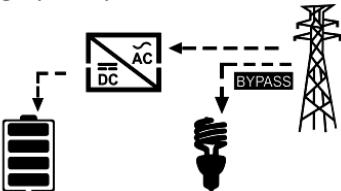

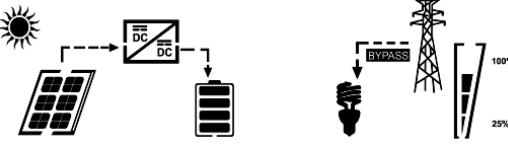

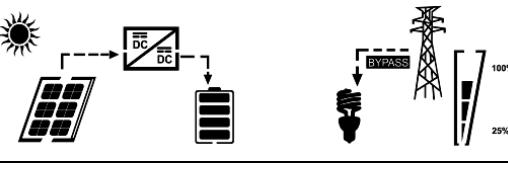

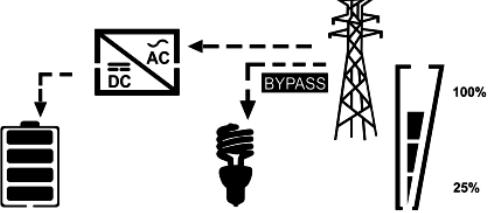

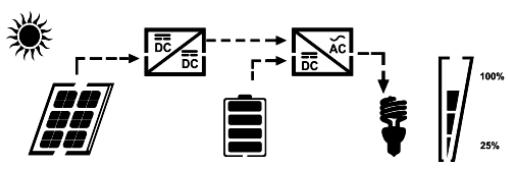

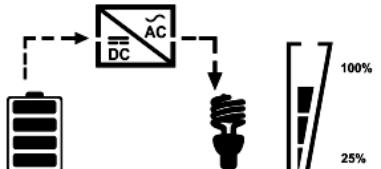

The LCD display information will be switched in turns by pressing "UP or DOWN" key. The select able information is switched as below order: input voltage, input frequency, output voltage, output frequency , PV voltage, PV power, charging current, PV power, battery voltage, output voltage, load percentage, load in Watt, CPU version.

Select table information	LCD display
Input voltage/Output voltage(Default Display Screen)	<p>Input voltage=230V Output voltage=230V</p>
Input frequency/Output frequency	<p>Input frequency=50Hz Output frequency=50Hz</p>
	PV voltage=30V PV power=600W

PV voltage and power	<p>PV 30 V 600 W</p>
PV charging current and power	<p>PV 50 A 600 W</p>
Battery voltage/Output voltage	<p>Battery voltage=25.5V Output voltage=230V</p>
Battery voltage/Load percentage	<p>Battery voltage=25.5V Load percent=70%</p>
Battery voltage/Load in Watt	<p>When load is lower than 1KW, load in W will present xxxW like below chart.</p> <p>When load is larger than 1KW ($\geq 1\text{KW}$), load in W will present x.xxKW like below chart.</p>
	<p>Version model=nor Version number=1.05</p>

CPU version	
-------------	--

Operating Mode Description

Operation mode	Description	LCD display
Standby Mode Note: Standby mode: The inverter is not turned on yet but at this time, the inverter can charge battery with AC input and PV energy.	Utility input bypass to output, charger available.	<p>Charging by utility.</p>  <p>Charging by PV energy.</p> 
Line Mode	The unit will provide output power from the mains. It will also charge the battery at line mode.	<p>charging by PV energy.</p>  <p>Charging by utility.</p> 
Battery Mode	The unit will provide output power from battery and PV power.	<p>Power from battery and PV energy.</p>  <p>Power from battery only.</p> 

Fault Reference Code

Fault Code	Fault Event	Icon On

16	Load too high	[16] <small>ERROR</small>

Trouble Shooting

Use the table below to solve minor problems

Problem	LCD/LED/Buzzer	Explanation / Possible cause	What to do
When power fails, the battery time is shorter.	Battery low alarm issue quickly.	Battery voltage is too Low.	Charge the unit at least 8 hours.
		Battery capacity is not full even after charge the unit for at least 8 hours.	Check the date code of the battery. If the batteries are too old, replace the batteries.
	Input voltage is	Input protector is tripped.	Check if AC breaker is tripped

	displayed as 0 on the LCD and green LED is flashing.		and AC wiring is connected well.
Mains exists but the unit works in battery mode.	Green LED is flashing.	Insufficient quality of AC power. (Shore or Generator)	1. Check if AC wires are too thin and/or too long. 2. Check if generator (if applied) is working well or if input voltage range setting is correct. (UPS Appliance)
	Green LED is on.	Set "Solar first" or "SBU priority" as the priority of output source.	Change output source priority to Utility first.
	No LED display	Battery is not connected well.	Check the external battery cable and terminal. Make sure all the battery connections to the unit are all correct.
Buzzer beeps continuously or incontinuously , red LED is on or flashing.	Battery defect.		Replace the batteries.
	Fault code 00	Output short circuit.	Check if wiring is connected well and remove abnormal load.
	Fault code 01/16	Overload error. The inverter is overload 110% and time is up.	Reduce the connected load by switching off some equipment.
	Fault code 02/15	Battery weak. Battery voltage too low.	1. Re-charge battery. 2. Replace battery.
	Fault code 03	Output voltage too high.	Return to repair center.
	Fault code 04	Output voltage too low.	Return to repair center.
	Fault code 05	PV temperature too high.	1. Check if PV panels are abnormal. 2. Return to repair center.
	Fault code 06	Battery voltage too high.	Check the battery specifications.
	Fault code 07	Fan fault.	Replace the fan.
	Fault code 10	PV current is large.	Return to repair center.
	Fault code 11	PV voltage too low.	1. Check PV panels are abnormal. 2. Return to repair center.
	Fault code 12	PV voltage too high.	2. Return to repair center.
	Fault code 14	Output frequency anomaly.	Return to repair center.

Specifications

EU Simplified Declaration of Conformity

SC ONLINESHOP SRL declares that **Solar inverter PNI GreenHouse SC1100B** complies with the Directive EMC 2014/30/EU, Directive 2006/42/EC and LVD 2014/35/EU. The full text of the EU declaration of conformity is available at the following Internet address:
<https://www.mypni.eu/products/7525/download/certifications>
